EASTERN QUEBEC SPRUCE

We have four mills sawing Spruce for us in Eastern Quebec and two on the Transcontinental West of Quebec. We are open to sell any one or all of these cuts.

We have also about 1,000,000 feet Dry Spruce 1919 sawing, ready for immediate shipment. Will only consider selling this stock in large blocks.

Maintaining a Standard

The quality of lumber, its manufacture and itgrading are three prime requisites in maintaing a standard of production. When you get them l you know you are receiving full value.

With each shipment of our

Red or White Pine

there is the quality because it is cut from th best growths in Ontario, the proper manufacture ue to our excellent milling facilities; and the right rading because we invariably satisfy.

Try us with your next order.

Merit Will Win—

At the National Wholesale Lumber Dealers' Convention held in Washington last March, Senator Warren G. Harding, Republican choice for next President of the United States, said among other things, that "Merit will win."

He had particular reference to men. But, this applies equally well to material.

We handle only lumber of merit which explains the growing demand for our stock.

You should ask us for prices on your next order.

Simonds Crescent ground Cross-cut Saws

There is no other cross-cut saw on the market that gives so much satisfaction as a Simonds Crescent Ground It is a fact, established by tryouts in the heavy timber belt, that a Simonds will cut 10 per cent. more timber in the same time, than other brands of saws. Not only is it fast cutting, but it is also an easy running saw, honestly made and ground scientifically. A Simonds Crescent Ground Cross-Cut Saw does not bind in the kerf, and is fully guaranteed.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, atthe Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40 Toronto, July 1, 1920 No. 13

New Era in the Building Age

The question is asked every now and then by those having business relations with wholesale and retail lumbermen, contractors and others, "Is this a good time to build?" "Will not prices come down?" "Is one safe in undertaking to erect a home or would you advise delay in structural operations?" These are pertinent queries and naturally difficult to answer. The world is passing through chaos and unrest. The social order of to-day is in a state of flux, but, according to the best authorities, the old days that are gone, will never return, and whether the times ahead be better or worse than those that have passed, depends largely upon the action of the people, their industry, disposition and thrift.

There are some present-day notions or tendencies that must be uprooted on the part of the younger generation, and one is that it is a disgrace to work. It has always been the badge of honor and the stamp of manhood and womanhood. In time to come it will be regarded with equal appreciation and bear the mark of dignity and worth as in the days before the war.

But this apart, as we are not discussing questions of a sociological nature. The query remains,—should anyone build now? The response of those who have given sane consideration to the subject and all its aspects is that it is always good policy to build "what you need, when you need it, but only what you need." If you require a home or your property urgently should be repaired, don't wait. Delays are generally more or less fraught with danger and the overcautious man has, in all relations of life, suffered perhaps more reverses and undergone more disappointments, than the precipitate person or the plunger, as he is commonly known. There is much condemnation for the rash and headstrong, the speculative and the seemingly irresponsible, but on the other hand, these are the factors that move the world, create communities, build cities and foster national undertakings and commercial and industrial enterprises.

There is the other class, who are always holding back and will never make a venture. They have marked time from creation's dawn and have always been a brake on the wheel of progress. They say "go slow." The trouble often is that many never go at all. They slip back instead of moving forward, and so it is with the building proposition. We do not believe there is anything to be gained by delay, that neither labor nor material or other contingencies will be appreciably altered for a long time to come; neither will the supply and demand be equalized for a period of probably two to five years.

Statistics reveal that approximately fifty-nine per cent. of the building cost is labor. Will this item be reduced? Freight rates are going to be increased. This means higher cost. No one looks for any decline in the cost of labor and should there be a material reduction,—say ten to twenty per cent., in the other items of cost, the saving would be small and probably not commensurate with cost of delays. People who are expecting pre-war prices will be disappointed. We are living in a new era and must accustom ourselves to new conditions and surroundings.

Irving Fisher, probably the country's first authority on the subject of prices, says: "Go ahead on the new price level. Business men should face the facts. To talk reverently of 1913-1914 prices is to speak a dead language today. The buyers of the country, since the armistice, have made an unexampled attack upon prices through their waiting attitude, and yet price recessions have been insignificant. The reason is that we are on a new high-price level, which will be found out that the clever man is not the man who waits, but the one who finds out the new price facts, and acts accordingly."

* * *

A Problem For Individual Solution

Does it pay the average retail lumberman to operate a planing mill? This has long been a question of vital interest to the trade, and no satisfactory solution can be given which will apply generally to all members of the industry.

In real estate circles one of the oldest problems which has been discussed for years, is the advisability of owning rather than renting a house. In spite of the agitation that has been conducted for generations and the economic, sentimental and other reasons presented for owning a home, about 50 per cent. of the people in the larger centres still continue to lease the dwellings in which they reside, and probably will do so until the end of time. There are many reasons, of course, why certain persons do not become home owners and there are, probably, equal numbers of reasons why all retail lumbermen do not own and operate planing mills.

It is interesting to note the different views presented in the news columns of this edition on the proposition. Much, of course, depends upon the trade which a yardman caters to, the amount of stock he carries, his annual turnover, labor conditions, building prospects, repair trade, propinquity of other woodworking establishments, the service he aims to render, etc. There is no doubt, however, that many a retailer in his desire to own a planing mill, has over-reached himself and purchased equipment which can be used for only a limited period, in which considerable money is locked up at present high values. Unless machines can be kept fully employed from 50 per cent. to 60 per cent. of the time, they generally result in a loss to the proprietor, and the class of work required in a small centre can be turned out reasonably well with less equipment than is generally supposed.

The subject is discussed from every angle in the present issue of the "Canada Lumberman" and opinions based on experience and practical insight of various men are well worth reading, presenting, as they do, a symposium of ideas that should prove helpful, timely and valuable. After all, this question is one that will have to be solved individually. It may pay one man to operate a small planing mill or sash and door factory, whereas in another town such an establishment would be a decided loss and any money made in the lumber yard, sunk in the operation of the industrial plant.

There is this much to be said, and that is, the man who has not a planing mill now and is thinking of making the necessary installations, should give the matter full consideration before undertaking the work and size up as accurately as possible the volume of trade

that will present itself and how much he can add to his service, turnover and facilities.

* * *

The Trend of Trade Conditions

Recent declines in the prices of a few commodities are not to be regarded as isolated instances, but are part of a gradual and general movement that has been under way for a considerable time, says the National Bank of Commerce in New York. in a discussion of current business conditions.

It has generally been conceded that prices would ultimately seek a lower level than that maintained during the war and immediately thereafter. Such decline has always followed the over-stimulation of commerce and industry produced by war. Under these circumstances, a downward price movement, if gradual and orderly, is to be welcomed both as an evidence of the return of more orderly conditions and as a factor in accomplishing that return. Such a movement in the prices of basic commodities is now clearly evident. Recent sharp declines in a few commodities, however, are likely to cause the business public to lose sight of the fact that in a number of other commodities a gradual decline has been under way for a considerable time.

Even at this time it is well to emphasize once more that the abnormal price has been the result first, of actual physical shortage of goods in relation to demand, and second, of expansion in the volume of credit and the various forms of money. It is thus clear that a decline in prices can only be brought about by a falling off of demand, an increase in the physical volume of production, a decrease in the volume of credit and money, or by these and various other causes working together. The armistice automatically destroyed the specialized demand which the war had created, and removed the artificial support which had sustained the buying power of Europe during the conflict. While the stimulated domestic demand at first appeared to offset this, this influence could not possibly be permanent. In many lines consumption is not immediate, so that the rate of purchase after every abnormal period inevitably declines to a normal level or below it. It is primarily this tendency which has been reflected in the refusal of buyers to accept additional price increases, or indeed, to buy in undiminished volume at the levels which had prevailed for months.

In the face of these conditions, discernible to all far-seeing business men, the unwisdom of further credit expansion became apparent some months ago. Efforts to prevent such expansion have resulted in a considerable strain on credit, and this has been much accentuated by retarded transportation and consequent tying up of a large volume of credit.

A factor not to be overlooked at the present time is the increasing unemployment. In some districts large numbers of men are out of work as a result of disorganized transportation. This effect has been especially noteworthy in the coal regions and in the great centres of automobile manufacture. Refusal of the public to accept increased prices, or even to maintain a volume of purchase equal to that of recent months at the level of prices then prevailing, has reacted sharply on some sections of the textile industry and on the garment trades. Considerable unemployment in these industries has resulted. If this is of brief duration, it need have no serious effects, but prolonged and widespread unemployment rapidly destroys buying power and produces social unrest, so that a far-seeing policy will indicate its avoidance if this is at all possible.

* * *

Extending the Service of Aeroplanes

The Province of Quebec has been comparatively free of disastrous forest fires for some years, largely due to the system of protection and forest rangers which the government, acting in co-operation with the big companies, has built up. It is understood that the government will extend its efforts still further, and that one of the most important directions this extension will take will be towards having further aeroplane service. Quebec was the first province to install aeroplane service to watch the forests, the St. Maurice Protective Association, comprising companies which have large limits on the St. Maurice, inaugurating the service with the co-operation of the government.

During the last three or four years laws of a most stringent kind have been enacted by the Quebec Legislature towards protecting the valuable forest areas of the province, the forestry resources of the province constituting the second industry in Quebec, and growing continually. The amount of pulp wood cut in 1918 alone was 1,599 278 cords, a big increase over 1917, when the number of cords of pulp wood cut was 1,357,007 cords. The value of all forest products for 1918 rose to $40,761,730, but when the value of the finished article is considered, pulp and paper, the value is very much higher. Since 1910 the Quebec Government has had an embargo on the exportation of pulp wood cut from Crown lands, and the result has been that in seven years the number of tons of pulp produced has more than doubled, and the new mills erected in the past two years have raised the proportion of increase still greater.

With the industry at such high points, and constantly growing, the government gave its aid to the formation of four fire protective associations, namely, the Ottawa River Forest Protective Association, the St. Maurice Forest Protective Association, the Laurentian Forest Protective Association, and the Southern St. Lawrence Forest Protective Association. The fire wardens are appointed by the government, on recommendation of the association, and they work under the direction of the managers of the associations. The aeroplane is the newest device used by the fire wardens, but supervision is also exercised by the use of horses, motor cycles, canoes, gasoline launches, etc. There has been installed also a system of telephone lines so that prompt warning may be given of fires.

When it is recalled that vast areas of forests were burned some years ago, the record of 1918, the last official one to hand, is comforting, showing that only 10,543 acres were touched with fire in 416 fires. There are over 414 fire wardens in the four districts.

* * *

Editorial Short Lengths

Speaking at Orillia recently, Hon. E. C. Drury, Premier of Ontario, intimated that the province was not receiving enough from its Crown timber lands and laid stress upon the fact that Ontario with its huge resources in this line is barely in receipt of the same amount as New Brunswick gets from its forests.

* * *

Who says that motor trucks are not helping to relieve the housing shortage? Doubters are referred to a Kansas man, who, in order to dispose of a house he owns at Towanda, Kan., jacked it up, placed two pairs of wheels under one end and hitched a truck to the other, and pulled the house over country roads to Wichita and then sold it.

* * *

It is announced that in order to stimulate home building in Tacoma, Wash., the St. Paul & Tacoma Lumber Co. have declared a reduction of 20 per cent. in lumber. The cut in price is made exclusively for home building. The reduction includes all kinds of lumber with the exception of shingles and lath which are now selling at comparatively low prices.

* * *

The scarcity of newsprint paper is being felt more keenly as each week passes and the demand is growing more incessant. It is understood that the Canadian mills are now ready to fill Canadian orders and agree with the principle that 15 per cent. of their output should be reserved for the domestic market. To this regulation, if one is passed by the federal government, no serious objection will be offered by the newsprint producers, but if there is any attempt in the way of price control or regulation, the same as existed during the war, there will be a determined protest. It appears that most of the publishers in Canada are now willing to pay whatever is the prevailing export price and by adopting this attitude, and the mills agreeing to furnish a quota of their output to Canadian consumers, there is no reason why an adjustment of all difficulties should not be speedily effected. Just what figures will prevail after July 1st, is not known as yet, but either 5c or 5½c will be the ruling rate. Most mills have notified their Canadian customers that they will take care of their wants during the second half of 1920.

Mr. Dealer! Have You Installed Service Room

Not Merely Show Place or Display Apartment For Forest Products Materials—Its Location and Facilities Outlined—Some Practical Suggestions

What is a service room ?

An Eastern lumber yard was destroyed by fire. The dealer rebuilt immediately. In making his plans, he determined to have a service room, although he didn't call it by that name. He built a two-storey office and stock room facing the street. Across the driveway from the office and opening on the street, he located the Service Room. It had large plate glass windows, a hardwood floor, oak trim, metal ceiling, fine fixtures, and an interesting display, says R. S. Hinman, Retail Representative of the National Lumber Manufacturers Association.

To-day that room is used only for storing roofing, wall board and a dozen other miscellaneous articles, and that dealer has no use for service rooms. But why ?

Having Sympathy with the Idea

The success of the service room depends primarily upon two things: First, a thorough understanding of, and sympathy with, the "service" idea, and second, the equipment to render real "service."

The service room is not merely a show room or a display room. It is a room in which the dealer has the opportunity to exercise the highest form of salesmanship. The size, location, furniture display, and so forth will depend entirely upon the individual dealer, the facilities at his command, and the requirements of his community. The service room may be an adjunct of the private office, or, if the dealer hasn't a private office the service room may be used as such. A service room may be a room devoted exclusively to the business of selling, or, it may be a table and a couple of chairs where the dealer can take the prospective customer, show him the things he wants to show him and talk to him without interruption.

The correct answer to every question that can be asked about fitting up a service room is based upon the principles of good merchandising.

"What am I trying to do with my service room? Sell merchandise at a profit and please my customer, giving him the material best suited to his purpose. When I go into a clothing store to buy a $50.00 suit and the clerk shows me a suit for $100.00. doesn't it rather spoil my taste for a $50.00 suit ? Would I try to sell a Ford car by showing the prospect a Dodge?" Which is the easier—to dislodge an idea from the customer's mind after he has made up his mind as to what he wants, or to show him the things that he ought to have and prevent him from getting the wrong idea ?

Proper Use of Wall Space

A hardware manufacturer who specializes on building hardware has a display room which cost many thousands of dollars. Walk into that room and you see merely a room finished in dark paneled mahogany and richly but simply finished. If you are a prospective customer the chances are that the salesman knows before you ever reach the room about what kind of hardware you are interested in, but if not, you sit down in one of the comfortable chairs and, after a little conversation, the salesman has a pretty good idea of what you want.

He then goes to a wall, opens up a case and there, richly displayed, is the particular lock set in the design and finish that he thinks you will want, based upon what you have told him. If this is not satisfactory, he opens up another case and shows you something else, but there is the important point—you are not confused or bewildered at any time by a great display of the different styles, designs and finishes. All the goods that are on display are so arranged that when you are looking at one particular design, you see nothing else. You have a chance to make your decision absolutely unhindered by a multitude of other designs.

Successful lumber dealers all over the country have found that it does not pay to put anything in the service room without a sound merchandising reason for its being there.

The Importance of Location

The size of the service room will more often than not depend upon the amount of space available in an office that is already built. In laying out a plan for a brand new building with a serivce room included, a careful study of the articles to be shown in the service room will be required to determine the size. As most of the displays will be on the wall, this will be the basis for fighting. Instead of one very large room, it may sometimes be found advisable to have two smaller rooms, as this gives more wall space and also accommodates more customers.

The location is highly important. A direct street entrance is not necessary, in fact. it may easily become a detriment. One thing that is absolutely essential is that there should be an entrance to the service room from the dealer's private office. In fact many dealers consider that the only entrance should be through the private office.

The furniture may consist of a table, flat top desk or both, and a few comfortable chairs. There should be drawers for catalogues and plan books. The room should be well finished, with the kind of materials you sell. The flooring may be hardwood, or may be covered with a rug. On the walls there could be a few pictures of subjects pertaining to the lumber business, and on the table a few magazines or books of general interest. The fitting up of the room will be largely a matter of individual taste and judgment.

The materials to be displayed will consist of samples of the various products you have to sell, such as commercial woods, finished and unfinished, mouldings, hardwood flooring in finished panels, stained and creosoted shingles, mantel brick, and so forth. The different styles of door and window trim in use in the dealer's locality, together with examples of various details of construction may also be shown. No two dealers will want to show the same items in their service room and a little thought and study will determine in such case that which ought to be selected.

Keep Materials in Cases

One thing is important. The room, when entered, should not present the appearance of a miscellaneous collection of building materials. It should be attractive to the eye, and most of the materials should be kept in wall cases, where they are practically out of sight until the time comes for display. In this way the materials can be kept clean and bright at all times. but most important of all, the dealer can show the prospect exactly what he wants him to see without a great many other articles to distract his attention. This enables the prospect to decide upon one thing at a time and will be a great time saver for the dealer in making the sale.

The same principle should be followed in regard to plan books and catalogues. These should be kept out of sight until the dealer has had an opportunity to talk with the prospect and find out about his requirements. Practically every one who starts to build has something like a limit to the amount he expects to spend. If a man expects to spend $5,000 for a house, he should not be encouraged to look over a lot of $10,000 designs, because it is human nature to select a $10,000 design and then want to try to build it for $5,000. If the plan book is not divided according to the cost of construction, the dealer should make a list of the different designs that come under the various price classifications. He can have a list of houses that can be built for $3,000, $5,000 and so on, then when he has found out how much the customer expects to spend, he can show him the plan book and point out to him the different designs in the book that can be built for about such an amount.

Manufacturers' samples and literature should be a part of the display of the service room, handled, of course, as indicated above. The public sees a great many articles of building material advertised in the magazines. Whenever a prospect asks the dealer about such materials, the dealer should be in a position to give information, and if it is a material that can be supplied, he should have on hand such sample and literature. These can be kept in the service room. as outlined above.

How to Announce the Service

The use of the service room will have a tremendous effect on the dealer's business. Its effects will be felt first upon the dealer's relation to the carpenter contractor. A dealer in a Minnesota town put in a service room. He said very little about it until it was completed, then one by one he took the contractors of the town to one side and talked to them something like this:

"Here is a service room that I have built to help you land more jobs and me to sell more building material. It contains everything you need to show a prospective builder and help him decide what he wants. Of course you understand that it is going to be open to any one who is figuring on building, so that no one person can use it exclusively, but whenever you have a prospect, you are welcome to bring him in here and spend all the time you need, in other words, make this your salesroom."

How to Make Profitable Use of the Entire Log

Too Much Material Goes Into Sawmill Burner—Growing Demand For Wood Articles of Every Kind Affords Opportunities For Using All Odds and Ends

"Using all the Log" was the subject of an edifying and practical address delivered recently at San Antonio, Texas, by C. E. Mattison, manager of the Arkansas Land and Lumber Co., who spoke ably and convincingly before the Southern Pine Salesmen's Service Association.

In the course of his remarks Mr. Mattison sasid:

"To my mind the main refuse conveyor of the average sawmill, that starts down on the lower floor and reaches out to the maw of the refuse burner, looks like a stream of dollars going to destruction. It is of great importance that we conserve foodstuffs and annual crops, but it is of far more importance to conserve raw materials, such as lumber, coal, iron, oil, and gas which has taken ages or at least a life time to produce out of the soil.

"In utilizing mill waste the sawmill conveyor is usually picked over first for lath. Generally speaking, to every 1000 feet of lumber produced there will be approximately 250 four-foot lath accumulated, and if 32 in. lath are saved there will be 300 lath to the thousand feet; 32 in. lath can be made out of 'shims' too short for four-foot lath and which develop to quite an extent from crooked shortleaf timber that grows in the northern portion of the southern forest on rolling land.

"Short trimmings suitable for box shooks, etc., are picked out of the conveyor following lath. This stock can be stacked loosely on top of a kiln car and after drying and cooling sent directly to the planing mill and over box saws. You are all familiar with box shooks, so it is needless to describe this product; planing mill cuttings and trimmings work nicely into box shooks.

Too Much Stuff in the Burner

"But one can find mill waste ahead of the refuse conveyor. If you will watch your edger tables you will see many small strips that are admirable for small mouldings; strips that usually go to the slasher, and as they answer neither for lath or box shooks they go to—hell—the burner. These edgings can be sent either over the trimmer and cut into regular lengths, or, if this is not practical in some mills, they can be pulled off the trimmer chains after passing from the edger rolls, cut to lengths on a small stationary saw, then bundled loosely in small bundles at low labor cost. Place these bundles also on top of the kiln cars, and when cured send them directly to the stickers. At one Arkansas mill it has been the custom for a number of years to kiln dry boards before running them through the edger. An edger is placed at the shed and the edgings are then made into small mouldings.

"At another Arkansas soft pine mill, and one of the largest in the State, mill waste is no longer a side line but one of the principal products. Last year they were able to operate only about 75 per cent. of normal waste capacity, yet without considering lath production they saved from so-called mill waste alone 4,330,000 board feet for which they received a little better than $31 average per thousand f.o.b. the mill. Nearly two million feet of this saving was worked into small cleats that required at least 10 pieces from one board foot. Having a crating and box department in connection with their operation, they are able to work practically every kind of edging and trimming that develops.

Used to Generate Steam

"At two other mills with which I am familiar a part of the excess waste is used to generate steam for local electric light and waterworks plants. One of these mills installed, instead of a burner, two rated 150 h.p. boilers with extra hog equipment. Fuel is produced that generates from 300 to 400 h.p., which supplies continuous service of light and power to cities within a radius of 27 miles. In these cities the water plants are driven electrically as well as a large flour mill and a number of smaller industries. The average daily consumption of electric power is 6000 k.w. Even with this arrangement other by-products are made from mill waste. In the year 1918, 868,772 feet were saved and marketed at an average price of $19.05 f.o.b. the mill.

"The total production of the mill was fourteen and a half million feet. The material in dimension ran as small as 1 x 2½ x 12 in. Smaller sizes could have been made and marketed if the waste had not been required for fuel. It might be interesting to state here that woman labor produced this material while the men were at war. Last year the production from waste was 1,157,027 feet, which was sold at $28 per M f.o.b. mill. One might get the impression that wasteful methods of manufacturing prevailed at this mill, but the fact that this electric power and by-products, including lath, were developed from an annual production of only 21,000,000 feet (which was an over-run of the log scale of 22½ per cent.) does not reveal wasteful methods.

"There is one remarkable mill in Arkansas that has been in operation for nearly forty years. Nearly every visitor to this plant makes use of the old hackneyed phrase, 'Saving everything but the squeal.' Nothing is burned except for creating power for the plant. Not even stove wood for employees is available, but fortunately the mill is located near a natural gas line, so they avail themselves of this cheap fuel. Pieces as small as ⅜ in. x 1¼ in. x 8 in. are utilized, and it might be interesting to state that these are made into small trays used by smelters and founders on which small pieces of scrap metal are sorted. The trays loaded with metal are placed in retorts and consumed after contributing to high efficiency handling. Chemical companies also use these trays for the same purpose and in the same manner.

Demand for Small Wood Articles

"There is a growing demand for small wood articles, among which may be mentioned toys and bird-houses. In a recent bulletin issued by the U. S. Department of Agriculture, Forest Products Office, showing opportunities to sell waste, I may mention a few items:

"A Hartford, Conn., manufacturer wants 1⅜ x 1¾ x 2 in. to 8½ in. long from oak, yellow pine, hickory or whitewood and can use two carloads per year.

"Crystal Springs, Miss., large quantities required, hard and soft woods, 7/16 x 2½ to 10 in. and up.

"A Brooklyn manufacturer wants three carloads per year of any specie of wood, ½ x 3½ to 1¾ x 10 to 8½ in. long.

"Another New York manufacturer wants four carloads per year of ⅜ x 8½ x 11—hard or soft wood.

"Niagara Falls, 10 to 20 cars per year, 7/16 to ¾ x mixed widths, 13 in. to 22 in. long, hard or soft wood.

"Pittsburgh, Pa., wants from longleaf 2 in. 3 and 4 in. 4 to 8 in. to 12 in. and up, 10 to 20 carloads per year.

"Wood distillation is too great a subject for me to dwell upon at length. Permit me to say, however, that the distillation and refining of oils produced from pine woods is a wonderful field for the research chemist. As many as 75 distillates have been made and I feel sure that no field before us to-day offers greater opportunities for discovery. It is claimed there are today millions of cords of wood lying on the ground rotting, and there is a money value of at least $25 in each and every cord of this wood. There are every day thousands of cords of rich pine wood burned at the sawmills that have an equal money value. Many plants have failed, it is true, but every failure can be safely attributed to lack of knowledge of the industry, lack of capital or a poor process. Many men have gone into the business thinking they could get fancy prices for the products and have been disappointed. A steady sale at a reasonable profit is all that can be expected. There is a constantly growing demand for distillates. It was my pleasure to witness a test in wood distillation a few years ago. Briefly, one cord of box faced slabs was placed in the retort dead cold. Fires were started and in 22 hours there was produced 45½ gallons of turps, 11¼ gallons of light oil, 110 gallons of heavy oil and 40 gallons of pitch; 25 bushels of charcoal also developed.

Box Cleats From Waste

"In passing let me state, this entire field of conservation can be developed to a very profitable business and even though it does not produce large dividends, in the interest of conservation this subject should be carefully studied by the mill men. In conclusion let me state, also, that the salesman and retailer can materially assist in 'Using All of the Log.' For instance, I found a stove factory in Milwaukee cutting up long lengths into very short pieces. We later supplied them with short pieces from mill waste. A Chicago box factory was cutting and ripping 16-foot lumber into box cleats 1 in. square, 7 in. long. These should have come from the burner conveyor. Look through your territory for similar instances and, like the food conservationist, educate them to 'cheaper cuts.'"

Panoramic view of the sawmills of the Bishop Lumber Co., showing extensive shipping facilities by both rail and water. The greater portion of the docks of the company at Nesterville, Ont., were destroyed by fire recently

Bishop Lumber Co. Saved Mill in Fire

A serious fire recently visited the yards of the Bishop Lumber Co., Nesterville, Ont., and for a time it looked as if the entire plant would be wiped out. The flames, however, were confined entirely to the lumber water-docks and did not destroy any part of the sawmill. Manufacturing operations will not be interfered with in any way. About two-thirds of the water-trams and docks of the company were destroyed. These docks were originally about 1800 ft. long and about 1200 ft. of them were burned. There was a warehouse at the end of one dock which was consumed but the building did not contain many supplies at the time of the conflagration. The quantity of lumber burned was about 3,000,000 ft. It was mostly owned by White, Gratwick & Mitchell, of North Tonawanda, N. Y., although W. J. Brinen, of Muskegon, Mich., had a small quantity wiped out. The lumber and docks were fully covered by insurance.

The Bishop Lumber Co. was formed in September, 1916, taking over the assets of the Thessalon Lumber Co., Nesterville, in the district of Algoma. The product sawn is principally white pine with some red pine and spruce. The equipment of the mill consists of two band saws, a gang and re-saw, as well as lath mill, picket mill and mill for manufacturing box lumber from slabs. The daily cutting capacity is from 150,000 ft. to 175,000 ft. The firm usually turns out about 25,000,000 ft. to 30,000,000 ft. annually. All machines are set on concrete foundation and the power plant consists of six 100 horse power boilers. The yard is equipped in such a way that 8,000,000 ft. can be piled on the waterfront for boat shipment, 8,000,000 ft. on railway tracks for rail shipment, and 8,000,000 ft. in the yards, which can be forwarded conveniently by either rail or water.

H. H. Bishop is president of the company, H. W. Bishop vice-president and J. A. Bishop secretary-treasurer. During the past winter the company conducted nine logging camps and three timber camps and this year will turn out, in addition to the quantity of lumber already mentioned, 250,000 cubic feet of square timber.

New Company Buys Dominion Hardwoods

The Wood Turning Products, Limited, Fenelon Falls, Ont., of which G. H. Harper is managing director, recently took over the plant known as the Dominion Hardwoods, Limited, at Deseronto, and since then have been making a number of changes in the machinery, especially in the power plant, which is being transferred from steam-driven to electric-driven. The company will turn out principally broom handles at Deseronto, manufacturing all smaller turnings, chemists' boxes, etc., at their Fenelon Falls plant, where the hear office is located.

The Wood Turning Products also have purchased a sawmill and hardwood limit in Haliburton and will manufacture their lumber into squares which will materially lessen the operating costs at their turning plants.

Volume of Western Business Growing

H. Timms, of Timms, Phillips & Co., Vancouver, who has been spending several weeks in Ottawa, Montreal, Sherbrooke and other eastern points on business, was in Toronto recently on his return West. He spent some days with C. J. Brooks, eastern representative of the Company.

Mr. Timms reports that, while values have fallen considerably, he is not alarmed regarding the outcome of the lumber situation and believes that everything will adjust itself as soon as the present flurry is over. The shingle market has for some time been demoralized and certain western lines have been cut considerably in price. The demand from the Prairies is increasing, and with the prospect of the finest crop in the West that has been gathered in years, requisitions for building material should soon be enormous.

Mr. Timms states that misconception exists regarding the amount of stock which B. C. mills shipped to the United States during 1919 as compared with that which was sent to eastern Canada. Owing to the inability to get sufficient cars, only about 20 per cent. of the total output of B. C. plants was marketed across the border when the American call was extremely insistent, while during last year fully 40 per cent. of British Coumbia products were disposed of in Ontario, Quebec and the Maritime Provinces. Thus Eastern Canada got twice as much as the Western States when the whole year is taken into account, although there is a mistaken idea that these figures were practically reversed.

The volume of business being done by the western mills is increasing steadily and values will, in the opinion of Mr. Timms, soon regain their equilibrium. He reports that in all the places he visited in Eastern Canada, building activities appeared to be very active.

Big Suit Over Eastern Limits

In connection with the $600,000 action entered at Quebec through Mr. Aime Geoffrion, K. C., of Montreal, in the name of the Quebec Development Co., Ltd., against Sir Henry Price, Henry Edward Price and J. Leonard Apedaile, it appears this section was entered to recover half of the price of a deal of $1,250,000, by which limits belonging to the Oyamel Co. and later on the Quebec Development Co., Ltd., were sold to respondents. The amount wanted is $534,000, but due to the exchange is increased to $14,128,26 in Canadian money. The respondents alleged that one of the directors of the Quebec Development Co., Ltd., Solonel B. A. Scott, of Quebec, had not signed the deal and other reasons are also brought out. Amongst the other directors of the Quebec Development Co. are Senator Belcourt, and Mr. Duke, President of the American Tobacco Co., New York. The limits involved in the deal are located near Roberval at a point called La Grande Decharge by the Lake St. John.

Shingle Mills in West Closing Down

Word received from the west is to the effect that 30 per cent. of the cedar shingle mills of the province have been forced to close down temporarily within the past few week owing to the drop in the quotations for shingles and the present price of logs. It is said that the shingle business in Washington is more serious than in British Columbia and that fully 50 per cent. of the shingle mills of that state are closed down. It is hoped that a normal figure will soon be struck at which production can be resumed with prospects of commercial success but that the peak price will be lower than that of two or three months ago.

The present price of shingles is $4.75 per square for the 16-inch grade sent to the United States, and $4 for the 18-inch standard sold in Canada. A square of 16-inch shingles contains about 870 shingles. The old system was to sell by the thousand. The 18-inch grade contains about 600 shingles.

Big Rafts Containing Much Lumber

Swedish lumbermen have been on the coast and successfully investigated the possibility of rafting lumber from British Columbia to Europe. Rafts of large size, called rafanutes, have been successfully towed from Sweden to Great Britain. It is believed that the huge timbers of the province will make possible the construction and successful operation of rafanutes larger than those shipped out of the Baltic which contain four or five million feet each. The rafts leaving the Pacific coast will probably contain from fifteen to twenty million feet.

Retail Lumbermen Discuss "Planing Mill End"

Many Expressions of Views on Proposition Which, Owing to High Wages and Operating Costs, Constitutes Live Issue With Dealers in Wood Products

In the last issue of the "Canada Lumberman" there appeared a comprehensive and timely article on the oft-discussed problem of whether or not it pays a retail lumberman in a small town or village to operate a planing mill in connection with his business.

Several representative yardmen gave their views on the question and these were by no means unanimous although the majority of those interviewed appeared to be in favor of conducting a plant.

In this edition more opinions are presented on the same matter and they come from numerous parts of Eastern Canada. The various points brought out, the arguments pro and con and the different phases discussed will be read with interest and instruction.

Like many other questions, the one whether or not to own and operate a planing mill, depends to a large extent upon the stock carried and how bought, the locality in which the lumber dealer is situated, the class of trade he caters to, the population served, the amount of building going on, the service rendered, the range of products handled and the number and proximity of other woodworking establishments, their facilities, etc.

A. L. McDermid of Apple Hill, Ont., says:—We believe if the retail lumberman has a sawmill and manufactures a sufficient quantity of lumber suitable for his retail trade, it would then pay him to have a planer to manufacture his mouldings and dress his lumber, but where the retail lumberman has to depend largely on the wholesaler for lumber for his retail trade, it does not pay to have a planer then. We are in a position to know this fairly well as we do both wholesale and retail business. We find here that we cannot get a sufficient quantity of lumber to supply our retail yard without getting it from other wholesalers or the Coast. Regarding a sash and door factory, we have no experience in this line but believe that so many large factories are putting doors and windows on the market in standard sizes and in such large quantities, that they should be able to put this stock up cheaper than a person doing so on a small scale. There is one drawback, however, in rural districts at least in our locality—that we are often asked for odd sash and doors and patterns of moulding for repair work. When a man has a factory he can take care of this work better. We are strongly in favor of standard sizes and thicknesses of mill work, and we believe if a retailer kept this stock in sash, doors and mouldings, complete, and had the goods to deliver to his customer, that very often he would take what was made up rather than wait several days or perhaps weeks to have it manufactured. We find it often occurs with us that if we have the goods in stock we can always sell them.

Strongly Advocates Standard Sizes

Wm. Copping of Joliette, Que., remarks: "In my opinion it all depends on the locality and the extent of the business done. Personally I have a planing mill and it is very necessary that I have one for my trade, but I manufacture my own lumber and have a large local trade. A retail yard man who has to purchase all his stock outside, unless he has a very big trade, would, I think, be better to purchase all his lumber dressed. The owner would have to put a considerable amount of money into an installation, which, unless he ran the plant all the time, would cost more than the extra charge for dressed lumber. It would be much better if it was possible to arrive at standard thicknesses and widths for all mill work, and mouldings especially, as most every mill has different patterns in mouldings, which are constantly changing from one season to another.

A. Ludlam of Leamington, Ont., replies:—I would imagine operating a planing mill in connection with a lumber yard in small centres of population would, indeed, be a difficult matter. Skilled labor, which you must have, is very scarce and high-priced, and to retain same steady work, winter and summer, must be furnished. This is often very difficult in our long winters. The amount of capital required and the heavy overhead expense makes it a costly production. I might say we have two customers now who have closed their factories and are purchasing their requirements outside, and thus practically wiping out the overhead expense and labor trouble I might also mention that I have heard from a number of large concerns who have kept a close tab on the cost of operating, planing mills and factories, and have yet to learn of one such that, independent of their yards, would be self-sustaining. If this is so, and I have no reason to doubt it, how could any person hope to succeed in a small yard?

J. B. Mackenzie of Georgetown, Ont., writes.—In regard to your inquiry respecting the advisability of operating a planing mill in connection with a retail lumber yard, I have both kinds of yard and it may make me better able to give you an opinion. I would say that if your retail business amounts to an average daily turnover of $150.00, a modestly equipped mill will be a necessity. In our yard at Acton, Ont., we have a 5 h.p. motor to do light ripping, planing, band sawing, etc., and we would frequently be in difficulty were it not for our larger mill at Georgetown to do our special work. If serving a buying public of four thousand people enough special work will develop to make a planing mill pay and if it is an average community and the manager arranges with contractors correctly the plant can be kept going every day.

James Sparling, Meaford, Ont., says there are some articles that could be brought in for less in a small place than they can be manufactured by the local planing mill man, but in a country-town, especially where contracting is carried on by the local lumberman, there are a lot of articles to be made that one cannot keep in stock. Farmers often bring in their local lumber to be manufactured, "and," adds Mr. Sparling, "a town without some kind of a planing factory would be a poor affair to accommodate the public. In building and repairing houses a dealer could not keep a stock to suit the trade in every size. Door and window frames could not be kept neither could stair material, for every house requires something different from any other. I have been in the business in Meaford for over fifty years," declares Mr. Sparling, "and would like to retire if I could get a good live man to take hold of my business here, and there is no reason why he could not make it pay."

Not Profitable but is Necessity

K. J. Shirton of the Wm. Shirton Co., Dunnville, Ont., says:—For some years I have maintained that a planing mill in connection with a retail lumber business is not a profitable investment, but at the same time it appears to have been a necessity. The standardization of mouldings, if brought about, would lessen the need very materially. At the same time I wish to point out that a planing mill, in connection with a retail yard, is a means of bringing more custom to that yard. For instance, if there are two yards in a town, one equipped to do mill work and the other one having no mill, the former will be much more likely to get the bulk of the patronage as certain customers will desire to get all their material from a yard which can supply, quickly, frames, sash and other mill products instead of waiting for shipment from a distance. It appears, therefore, that the retail lumber dealer is forced into equipping his yard with, at least, a few machines to enable him to supply his customers promptly. The trouble is that he does not limit his equipment to what is absolutely necessary, and instead of putting in a few machines he keeps adding to his mill from year to year until he has eight or ten thousand dollars invested and, with the increased cost of labor, power, belting and all supplies together with the expense of upkeep, if he is not careful, he will be operating the mill end of his business at a loss. If I were going into the retail business again I would build more storage sheds and less mill. It is undoubtedly cheaper to get lumber milled at the large mills than it can be done at small retail plants. I would limit my machines to the following: one 10 h.p. motor; one rip saw; one cut off saw; one moulder and matcher; one sander, all contained in a small one storey building about 36 x 40 erected as cheaply as would be commensurate with stability. This would represent an investment of about $3,000 instead of from $6,000 to $10,000 which is the cost of the average planing mill. I would adhere to this size plant in spite of every inducement to increase it. The foregoing I believe is the only solution of the problem; not to eliminate altogether the planing mill in connection with a retail lumber yard but to reasonably decrease the size of the plant and procure dressed lumber, mouldings, doors, sash, etc., from the large manufacturers as far as possible.

Merchandising and Manufacturing District

S. Anglin & Co. of Kingston, Ont., say they are coming more and more to incline to the belief that in these days tradesmen should confine themselves to special branches as much as possible, and add: —You have hinted that some of the difficult problems of operating planing mills, sash and door factories are, the scarcity of labor, high

wages, etc. Plants of this kind require the best quality of skilled labor and workmen who command high wages. The ascertaining of costs is also a difficult problem as most mechanics and workmen dislike being hampered with the preparation of time and material sheets and it is always a hard task to get workmen to keep cost records. Furthermore, the work required by a factory in connection with a retail business, is usually of such a varied nature that it is quite difficult to compete with large factories specializing on certain lines of wood products. We are coming more and more to the view that merchandising and manufacturing are two distinct occupations and there is no doubt that any concern which carries on both of these, must have an efficient and complete organization in order to show a balance on the right side of the ledger, at the end of the year. The plants for planing mills and woodworking factories are now very expensive. The depreciation and upkeep is high and with workmen demanding an eight hour day, it is hard to produce enough in the limited time to pay the interest on the investment and show a profit over and above all expenses. It stands to reason that if a man invests $5,000 in a machine, he naturally expects the machine to operate as many hours of the day and as many days of the year as possible. Therefore, if a plant is only operating one-half of the year and that at a reduced number of hours per day, it is rather difficult to make it pay. These are questions which every retail lumberman has to decide for himself. It may be an easy matter to operate a cross-cut and rip saw in a lumber yard or even a planing machine that dresses on one or two sides, provided power is easily procurable. This might assist him to work up stock which might otherwise go to waste, but a dealer should consider carefully, before going to any further expenditure.

Some Eastern Expressions of Opinion

The Bridgewater Lumber Co. of Bridgewater, N. S., say that they believe, if properly operated, a planing mill in connection with the retail lumber business, is a paying investment.

J. L. Black & Sons, Sackville, N. B., have the following observations on this important subject:—"Speaking from our experience and observation, we think it would not be profitable for retail lumbermen to operate a planing mill unless they were assured practically continuous work for the mill. To run a planing mill for a few hours a day is certainly most unprofitable. In our opinion the lumber manufacturers themselves will in the future do very much more of this work than they have in the past. The sizing of lumber and the manufacturing of flooring and sheathing can be done more cheaply at the mill than at any other point."

Sanders & Bell of St. Thomas, are strong supporters of a planing mill being operated by a retail lumberman and say: "We have always found it satisfactory to conduct a planing mill in connection with our lumber business. Of course, we not only operate the planing mill but do outside construction and, therefore, we have no delay in obtaining frames, sash, interior trim, etc. One objection to the abolition of the small planing mill would be the utter inability of the large plants to meet all requirements in busy seasons. Also, it would tend to boost prices beyond reason as has taken place already in some lines of the building trade where work is done by a few firms.

A. A. Shortliffe of the Bloomfield Lumber Co., Digby, N. S., asserts that they do not have a planer in their mill but it is their belief that it would pay them to install one. "Regarding a sash and door factory, we have not this department," he adds, "but my view is that, considering what mills are charging to-day for these goods, it would pay to have machinery installed, especially where power is already in."

Buys Prepared Stock in Quantities

Wm. E. S. Savage of Mimico, Ont., discusses the whole question in an interesting way as follows:—"I am running a retail yard and buy everything I can manufactured in quantity. There are mills which make a specialty of this kind of work in the different lines and I can procure stock material ready for the market at a lower cost than I can to buy in the rough, pay freight on surplus weight, and then manufacture same. The people who specialize in the manufacture of doors, sash, columns, etc., throughout the towns and cities in Ontario, are in a position to manufacture same and make a respectable profit much cheaper than any retail lumber in any capacity. On the other hand, I feel that it is almost impossible to do a successful business without having a planing mill in connection with your business. The size and capacity of the mill should be just as limited as possible, but large enough to take care of emergency calls for any kind of detail work that your customers require. There is another reason I am in favor of a mill in connection with our business, and that is, to take care of the dead stock. No matter how carefully one may buy, there is always an accumulation of promiscuous sizes and kinds of material, which is not in demand but could be readily disposed of by manufacturing into some more saleable form. There is a strong tendency for the purchasing public (and we cannot blame them) to buy where they can get everything they may require for their job; hence the man or company without a mill is seriously handicapped. I have purchased additional machinery and am enlarging my factory but do not intend to attempt to boost this department. I simply feel that if a customer requires anything special he can have it although I would rather he would purchase stock articles."

Mill Reduces Size of Stock

J. A. Matthews, Orangeville, Ont., says that his mill is very handy and he can fill bills without having to carry too large a stock. He sometimes thinks, however, that if he did not have the mill, he would not start one. Since, however, Orangeville put in hydro-electric power, Mr. Matthews adds that the loss in the winter time is not so bad, as he does not have to keep a fire going when not using. He is of the opinion that the sash and door business alone would be a nuisance in the country town without a special place to make them.

A planing mill man, who does business in a town of six thousand in Western Ontario, says he has no hesitation in saying that having operated a yard and mill for forty years, his success has been in not employing more men than the yard can keep profitably employed and in keeping a very strict account of every piece of work produced. No matter how small the work is, there should be a sufficient allowance or charge for overhead expenses and then the proprietor would know exactly where his profits are. No haphazard style or guesswork will do in these days of keen competition and neither will the practice of trying to beat the other fellow's price. Regarding standard sizes, the writer says the bulk of planing mill business is special and will always be such.

Too Much Variety in Materials

A. Coates & Sons of Burlington, Ont., say:—As to whether it pays to operate a planing mill in connection with the retail lumber business, this depends greatly on the trade one is called to meet. We think it will be some time yet before people become educated to use standard sized materials in connection with the building. The whole question is a difficult one to answer. It is true that the scarcity of help and high wages are going to drive manufacturers to standardization of materials. We think there is far too much variety in materials and manufactured goods that serve the same purpose. We find that it would not be profitable to us to operate without a planing mill for the reason that we manufacture other lines that fit in with the planing mill business.

Joseph A. Likely, St. John, N. B., say they only handle rough lumber and timber and have not a planer in their yard. They are, therefore, not in a position to say whether or not it pays to operate a planing mill.

A. C. Chapman, Kent Lumber Co., Moncton, N. B., states that it is his intention to dress all his lumber in the future. Mr. Chapman, who operates a portable sawmill, continues.—We find in our sales, especially in the United States market, that the rough lumber is held over at some point for dressing which means handling two or three times. This means that much additional cost over what would be the regular cost had it been dressed at the mill.

Must Keep the Plant Working

W. H. Eves, Newmarket, Ont., says:—"Whether it is advisable for a retail lumberman to operate a planing mill in connection with his business is a question which depends very much upon the size of the turnover that the dealer does. Is it a small ordinary retail business or a large one which handles many thousand feet? Continuing Mr. Eves declares—In order to operate a planing mill profitably it would necessitate installing expensive machinery so that the work could be turned out in large quantities, thus cutting down the cost of manufacture. After an expenditure of this kind it would be necessary to keep the machinery working practically all the time in order to make it profitable; therefore, I would say, that unless a man had a retail business or sufficient to keep the machinery running, at least, six or eight months of the year that it is far more remunerative for him to get all the work he possibly can, done in transit. I have found it profitable myself to have a tilting table rip saw whereby a great many jobs could be turned out and a small surface planer. Many odd jobs can thus be taken care of in connection with the trade. As to planing mills standardizing all principal mouldings, I would say "Yes." By the means of standardizing mouldings it would cheapen in many cases ordinary building.

Educate Customers to Standard Sizes

G. D. McPherson of Merlin, Ont., says that he has no planing mill and, therefore, cannot talk from experience. He generally has on hand all standard sizes and, by educating his customers to the same, he finds that he gets away from investment in expensive ma-

chinery, labor troubles and strikes, fuel situation and scarcity, no idle men in winter months and no shortage in spring months or rush period. Mr. McPherson concludes that, on the other hand, some mills have to do the work, but, by having standard sizes, the larger mills can do the work cheaper and thus cut down overhead expense, which is everything in business.

John Hastie of Ormstown Station, Que., writes that he has had thirty-three years' experience in his line of business and he uses the following machines—surface planer, buzz planer and sticker and moulder, rip saw and cut-off saw, band saw, tenoning machine, sandpapering drum and elbow machines, turning lathe; all run by 15 horse power steam engine. He installed these machines nineteen years ago and only ran them when it suited me. He considers this equipment has been his greatest asset for many reasons. "In purchasing," he adds, "I rarely buy anything but stock sizes. I can resaw same and do not require to keep so large stock. I can accommodate my customers and plan to suit them. I make all mouldings and sash and doors with machines, which was all done by hand-work prior to installing them. I have proven that my plant is a great drawing-card in connection with my lumber business as many customers require various kinds of work which can be made on the foregoing installations."

Dominion Lumber & Coal Co. of Hamilton, Ont., say that they think a large number of retail lumbermen have lost money through a planing mill, and a representative of the firm, in discussing the question, said "I attribute this to the fact that many retailers do not have sufficient work to keep even a small planing mill going steadily and also the fact that they do not keep proper tab on the overhead expenses. As a consequence their profits, on the other end of the business are being eaten up by the planing mill. My own opinion is that in the majority of cases the money would be better invested in stock and have no machinery except rip and cross-cut saws."

W. F. Vilas Co., Cowansville, Que., regret that they have no knowledge or experience in regard to whether it pays the retail lumberman to operate a planing mill.

The Green Lumber Co., Limited, St. Thomas, Ont., say they do not keep a separate account in regard to the operation of their planing mill and lumber yard, and are, therefore, not able to state definitely whether the former is a paying adjunct.

E. Murphy, Mount Forest, Ont., replies that he is not running a planing mill in connection with his lumber yard and he has no intention of operating such a mill as he cannot see where it would pay.

The Operation of the One Per Cent Sales Tax

After many amendments and revisions the Excise Revenue Taxes have been finally adopted by the Federal Government and are now into effect. As the tangles are gradually being straightened out, it would seem that the new assessments as they become better understood will operate smoothly. One important fact to which manufacturers of lumber should take notice, is that on all sales by them to retailers or consumers, the tax payable is 2 per cent.

Recent advices from Frank Hawkins of Ottawa, secretary of the Canadian Lumbermen's Association, say that on shipments of lumber from sawmills to branch retail yards, and for which regular invoices are rendered by the mills to the yards, the sales tax on such shipments is 2 per cent. This is in accordance with the resolution passed recently which states, "In addition to the present duty, both excise and customs, a tax of 1 per cent. shall be imposed, levied and collected on sales or deliveries by manufacturers to wholesalers or jobbers and, on the duty paid on value of manufactures and in respect to sales by manufacturers to retailers or consumers, or on importations by retailers or consumers, the tax payable shall be 2 per cent."

It is believed that this step has been taken to equalize matters, as in the case of lumber sold from a mill to a wholesaler, 1 per cent. will be levied; then when the wholesaler sold a retailer or other consumer, another 1 per cent. would be exacted. On this lot of lumber, the Government would be getting 2 per cent., while if the sale were made direct by a manufacturer to a retailer, without passing through the hands of a wholesaler, under the regulation as at first exacted, there would be only 1 per cent. collected. The tendency might thus be for the retailers or large consumers to purchase direct from the mill and the lumber would in this manner escape an additional 1 per cent. To guard against this contingency when sales are made direct by lumber manufacturers to retailers or consumers, the tax payable is 2 per cent.

Further Decisions of Interest

The Canadian Lumbermen's Association has also sent out another notice of further decisions by the Assistant Deputy Minister of Inland Revenue, Ottawa, with regard to the sale tax, which is as follows:—

> "You are informed that the resolution introduced into parliament on June 16th instant provides that a tax of 15 per cent. is to be imposed on so much of the amount paid for boots as is in excess of $9.00 per pair, and provides further that top boots not less than ten inches in height, such as are used in lumbering, mining and fishing industries, or to river driving boots, are exempt from the application of the tax of 15 per cent.
>
> Lumber shipped from the mill and consigned to a stop-off for sorting or re-handling, for which a charge for labor only is incurred, is subject to the Sales Tax when billed to the consumer and if the charge for sorting or re-handling at the stop-off point is included in the cost to the customer, then the tax is to be computed on a price, including he charge for such sorting or re-handling.
>
> As respects loading stakes and fastenings of wire, required on shipments of flat or gondola cars, you are informed that the Sales Tax is applicable to such fastenings if a charge therefor is made to the customer.
>
> With respect to slabs sold for fuel purposes, you are informed that the Resolution before Parliament provides that wood used for fuel purposes is exempt from payment of the Sales Tax."
>
> The above covers the new regulations introduced by the Minister of Finance on Wednesday, the 16th inst.
>
> "Retail lumber yards selling lumber to contractors who use it in building homes and factories under contract have to add sales tax to their invoices. Sale tax is not payable by retail lumber yards on lumber sold for construction in small quantities to private individuals. In these matters, the test is whether the material sold is to be resold. If it is to be resold, tax is payable. It is, however, not payable on goods sold by retailers to ultimate user or consumer."

In regard to the 1 per cent. tax, it appears that certain retail lumbermen do not levy this when their customers are farmers or private citizens, and the material is not intended to be resold, but is used directly by the purchaser. If any stock has been "milled," of course the 1 per cent. will have to be collected, but in the case of rough lumber, shingles, lath, hardwood flooring, stock doors, etc., unless sold to a contractor or speculative builder, no levy is being made by many retailers. The point is quite clear that unless the material has been "milled" or is intended for resale or is disposed of to a contractor, such transactions do not come under the new regulations.

The majority of retail lumbermen, however, operate planing mills or have rip saws, cut-off saws and other equipment, and the bulk of their trade is with contractors, sub-contractors, speculative builders, etc.; it would therefore appear as if the 1 per cent. tax will apply in the majority of cases.

In answer to a series of questions which were submitted recently in the "Canada Lumberman" an error appeared, and for that reason the question is hereby repeated.

If a wholesaler has lumber which is still in the manufacturer's hands, but has been invoiced by the manufacturer at the beginning of the year, or prior to May 19th, and paid for by the wholesaler, and is in the wholesaler's possession in the manufacturer's yard, should the manufacturer charge the 1 per cent. on this stock when it is being moved? If your answer be no, does the wholesaler charge the tax on his invoice to the customer, and the wholesaler remit to the Government? Ans.—(1) No; (2) Yes.

Where Two Per Cent. is Paid

The following clause may also be of interest to the lumber industry:

8. (a) That in addition to the present duty of excise and customs a tax of one per cent. shall be imposed, levied and collected on sales and deliveries by manufacturers and wholesalers, or jobbers, and on the duty paid value of importations; that in respect of sales by manufacturers to retailers or consumers, or on importations by retailers or

consumers the tax payable shall be two per cent; that the purchaser shall be furnished with a written invoice of any sale, which invoice shall state separately the amount of such tax to at least the extent of one per cent.; that such tax must not be included in the manufacturer's or wholesaler's costs on which profit is calculated; and the tax shall be paid by the purchaser to the wholesaler or manufacturer at the time of such sale, and by the wholesaler or manufacturer to His Majesty in accordancee with such regulations as may be prescribed, and such wholesaler or manufacturer shall be liable to a penalty not exceeding $500, if such payments are not made, and in addition shall be liable to a penalty equal to double the amount of the excise duties unpaid.

(b) That the Minister may require every manufacturer and wholesaler to take out an annual license for the purposes aforesaid, and may prescribe a fee therefore, not exceeding $5, and the penalty for neglect or refusal shall be a sum not exceeding $1,000.

(c) That any such tax, costs or penalties may, at the option of the Minister, be recovered and imposed in the Exchequer Court of Canada or in any other Court of competent jurisdiction. in the name of His Majesty.

It has also been established that when a wholesaler sells part of a carload to a retailer, the sales tax of 1 per cent. must be collected on any portion of a car.

Wholesale Lumber Hold Monthly Session

At the last monthly meeeting of the Wholesale Lumber Dealers' Association held on June 11th at the Albany Club, Toronto, there was a good attendance, but the business transaction was largely of a routine character. A. E. Eckardt, vice-chairman of the Association, presided and interesting reports were presented with regard to the picnic which will be held at Grimbsy Park on Thursday July 15th. Progress was reported in this respect and from present indications the event will be a pronounced success.

D. C. Johnston reported for the Transportation Committee in regard to opposing tariff No. 14, which, relates to the weighing of cars, elimination of allowances, alteration of estimated weights, etc.

A short address was delivered by G. H. Bulgrin of the Canadian Puget Sound Lumber Co., of Victoria, B. C. E. L. Deniher of the staff of the Toronto University, gave an interesting and instructive talk on the "Metric System" with blackboard illustrations showing how it might be made applicable to the lumber industry. His remarks were clear and pointed and the members gained much knowledge regarding this system of measurement of which so much is heard at the present time. At the close a hearty vote of thanks was tendered the speaker. This will be the last regular monthly gathering until September.

O. R. L. D. A. Is Growing Rapidly

The membership of the Ontario Retail Lumber Dealers' Association is growing rapidly and now stands at 173, all of whom are paid up. This is a remarkably good record considering that the organization has been in existence only a little over two years. At the close of the first year the membership was 131, the second year 159, and it is expected before the close of the third the number of those belonging will exceed 200. The third annual convention of the association will be held in Toronto in February next, the 1920 gathering, which was a success in every respect, having taken place in Hamilton some months ago.

Mr. Lummis Left Large Estate

Under a will made March 6, William Daniel Lummis, lumber merchant, Toronto, who died April 5, devised an estate probated at $407,513, on application of Miss Jessie D. Lummis and the Toronto General Trusts Corporation.

By the will, the widow, Mary Ellen Lummis, is devised personal, domestic and household effects, and an annuity of $6,000. The daughter, Jessie D. Lummis, also receives an annuity of $6,000. A sister, Sarah Victoria Lummis, of Midland, receives an annuity of $750 for life. The clergy of the Church of the Good Shepherd at Wyebridge, Simcoe County, receives $200 annually for a period of five years from the death of deceased as a stipend. Charitable bequests are: To the St. Mary's Hospital for Consumptives, $250; the Aged Women's Home, Belmont Street, $100; and Hospital for Sick Children, $100. Nellie Sunley, a domestic, receives $500 "as a reward for her faithful services." The income from the residue is to be divided between the daughter and wife.

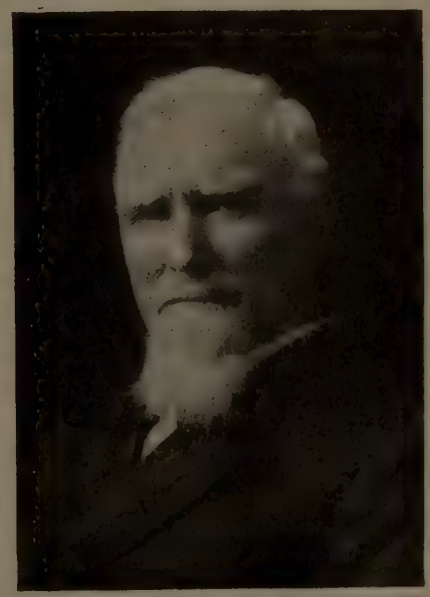
Mr. Piche on Welfare of Shantymen

There was a large attendance at the luncheon of the Quebec Rotary Club luncheon held in the Chateau Frontenac, Quebec recently. The principal speaker was Mr. G. C. Piche, superintendent of the Forest Branch of the Crown Lands Department of the Provincial Government, who spoke on "the welfare of the shanty men." In the course of his interesting remarks on the hygiene, religious and other conditions governing the welfare of the men engaged in the lumber camps, Mr. Piche impressed upon his audience the need of better facilities of recreation and the supplying of books, periodicals and newspapers for those following this pursuit. Mr. Piche dealt very fully with the subject and impressed upon the members of the Rotary Club the necessity of keeping in touch with the men engaged in this important industry.

Captain Dollar Urges Eastern Trade

Capt. Robert Dollar, the noted lumberman and shipping king who is now seventy-six years of age and feels good, as he says, for twenty years more, in a recent stirring address before the Canadian Manufacturers' Association at their annual gathering in Vancouver, spoke optimistically and whole-heartedly in favor of developing trade with the Orient to which he proposes devoting the remainder of his days. One-eighth of the human race, he stated, lived on the Yangtse River and its tributaries. In a single province there were 70,000,000 people, who had been self-supporting so far, but with a vast market among them.

"I say to you eastern manufacturers," added Captain Dollar, "isn't it about time you came over and got into the swim? No one is going to present business to you on a silver platter. You must get out and work for it. To get the trade in China, don't send a boy. Go after it yourselves. You can get the trade, and you are going to need it."



Capt. Robert Dollar, veteran lumberman and shipping magnate who addressed the Canadian Manufacturers' Association in Vancouver.

The purchasing power of China was increasing, he stated, and manufacturing was developing there. Fifteen cotton mills had been built in China in the past two years. China was the second greatest cotton consumer on earth, and Japan was doing a big business there, too. His ships were actually taking raw cotton to Japan and bringing manufactured cotton back to Canada.

Captain Dollar expressed his pleasure at the interest Canada was taking in foreign trade, but declared this interest still far from enough. No country could become great without foreign trade. Of the cargoes his steamers brought to Vancouver, 2 per cent. was billed to Eastern Canada, 16 per cent. ostensibly stayed in Vancouver, but a large share of this really found its way south of the line. The remaining 82 per cent. went direct to the United States. He had traced a great deal of this, and found that much of it, after being manufactured in industrial cities in the Middle West, found its way across the boundary to Canadian consumers. This was not as it should be. Canadian manufacturers should go to the source of supply to get the goods and manufacture them.

According to figures furnished by International Paper Company peeled wood is today selling at $34 a cord delivered at the mill, compared with less than $25 last year. Approximately 1 3-10 tons of wood are consumed in the manufacture of a ton of newsprint. The cost of labor has advanced from $8.68 a ton in 1915 to $25 under the new wage scale, which went into effect May 1 last.

Personal Paragraphs of Interest

J. J. Cluff, retail lumberman, Seaforth, Ont., spent a few days in Toronto recently calling upon the trade.

A. E. Cates, of Terry & Gordon, Limited, Toronto, is spending a holiday at Muskoka Lakes.

J. M. Hall, of Hall Bros., Toronto, recently returned from an extended business trip to the Maritime provinces.

Arthur Craig, of Firstbrook Bros., Limited, Toronto, has returned after spending some time in Calgary on a visit.

L. VanMeter, of Ottawa, general manager of the Denis-Canadian Co., Whitney, Ont., was a recent caller on the trade in Toronto.

Alfred Read, of Read Bros., Toronto, and family are spending the summer at Fisherman's Point, near Barrie, Ont.

Fred M. Thompson, of Robert Bury & Co., Toronto, has returned after spending a couple of weeks' holidays in New York.

Wilfred H. Pauze, wholesaler, Montreal, has acquired the sash and door factory of H. Mathieu & Co., Clarke Street, Montreal.

F. T. Verrall, of McBean & Verrall, wholesale lumberman, Toronto, is spending the month of July with his wife and family at Jackson's Point.

A. P. Dunbar is now engaged in the wholesale lumber business and has opened an office at 205 Tyrrell Building, 95 King St. East, Toronto.

C. G. Anderson, wholesale lumberman, Toronto, accompanied by Mrs. Anderson, leaves in a few days on an extended trip to the Pacific Coast.

G. H. Bulgrin, Marshfield, Wis., representing the Canadian Puget Sound Lumber Co., Victoria, B. C., spent a few days in Toronto recently.

H. J. Terry, of Terry & Gordon, Limited, Toronto, was in Atlantic City recently attending the annual convention of Rotary Clubs to which he was a delegate.

A. E. Clark, of Edward Clark & Sons, Toronto, has been a few days in Atlantic City, enjoying a rest and regaining his health which has not been any too good of late.

George A. Gall, vice-president of the Piercy Lumber Co., Limited, Vancouver, B. C., recently spent a few days in Winnipeg and other cities on business.

Mrs. J. W. Steinoff, one of Wallaceburg's oldest citizens and wife of Capt. Steinoff,, a few years ago one of the leading lumbermen of Ontario, died recently at her home in Chatham, Ont.

A. E. Masuret, eastern representative of Tomlinson & Mitchell, Winnipeg, has secured an office at No. 10 Canada Permanent Building, 18 Toronto Street, Toronto.

Dr. George E. Davenport, a prominent timber lands investor, died recently of heart failure in Vancouver. He was born in Brookfield, Vermont, in 1863 and was a member of the New Hampshire State Legislature for several years. He became interested in the timber business in the Canadian west and moved to Vancouver in 1907.

Paul G. Owen, secretary of the Quebec Limit Holders Association, Quebec, has just returned from a two months' trip to England. He speaks very optimistically of the trade outlook, and is of the opinion that there is nothing to fear so far as the exports of Canadian lumber are concerned. While it is true that there are immense stock on hand, these will be soon absorbed directly building is started on a great scale, and there are indications that extensive building will soon be commenced.

At the annual meeting of Edward Clark & Sons, Toronto, which was held a few days ago, Edward Clark was re-appointed president. A. E. Clark, who has been managing director, was also made vice-president of the company and W. A. Walker, who has been associated with the firm for the past three years, was elected a director and appointed secretary-treasurer of the organization. The report presented for the past year was a satisfactory one and the outlook for the coming season is regarded as promising. The firm are extensive handlers of hardwoods and specialize in birch.

E. H. Finlayson of the Dominion Forestry Branch, head office staff, Ottawa, and formerly District Inspector of the Forestry Reserves of Alberta, is the official representative of the Dominion Government at the Imperial Forestry Conference, which is being held in London, England, this month. Among the other delegates are M. A. Grainger, Chief Forester of British Columbia, who represents that province, A. Bedard of the Department of Lands and Forests, Quebec, the representative of that province, Robson Black, secretary of the Canadian Forestry Association, Ottawa, and Clyde Leavitt, Chief Forester of the Commission of Conservation, Quebec.

C. W. McCabe, 325 Kendall Ave., Toronto, who has been appointed Ontario representative of Campbell-McLaurin Lumber Co., Montreal, has had many years' experience in the lumber industry and possesses a practical acquaintance with all departments of the business. His first position was with the Bonny River Lumber Co., Bonny River, N. B., with whom he spent three years. He was then with the Rhodes, Curry Co., of Amherst, N. S., for seven years, serving in the capacity of salesman and latterly as assistant manager at one of their branches. Mr. McCabe then went west and was with G. H. Clare & Co., of Saskatoon. When the war broke out, he enlisted with the 96th Battalion for overseas service. Since resuming civilian life he has for the past two years been with Knight Bros. & McKinnon at Cobalt, acting in both a buying and selling capacity.

Inspection Rules Remain As They Are

J. A. McBean, Toronto

The Twenty-third Annual Convention of the National Hardwood Association, which was held in Chicago on June 17th and 18th, was attended by over 1000 delegates from various parts of the United States and Canada. The gathering was in every way an outstanding success and was one of the most satisfactory assemblies ever held by the Association. Among those present from Toronto were J. A. McBean (who is the Canadian representative of the Inspection Rules Committee), Frank Kent, R. McDonagh, W. T. Cole, J. W. Jacobson, W. C. Shreiner, J. M. Donovan, Toronto; T. R. Dunn of T. R. Dunn Lumber Co., Winnipeg, and others.

A. E. Clark, who has been a director of the Association for the past three years, retired, and George G. Goodfellow of Montreal, was elected as the representative from Canada. The social functions were particularly attractive, the annual banquet in the Gold Room of the Congress Hotel, being an outstanding feature.

Horace F. Taylor, of Buffalo, was unanimously elected president for the coming year, being placed in nomination by Hugh McLean of Buffalo, who is one of the stalwart members of the Association and a brother of Angus McLean of the Bathurst Lumber Co., Bathurst, N. B. Mr. Taylor's name was seconded by Hon. J. M. Woods of Boston, who was present at the annual convention of the Canadian Lumbermen's Association in Quebec in February last, and delivered a bright, happy address. Mr. Taylor who is well known to many members of the hardwood trade in Canada, is an earnest, thorough-going and progressive lumberman, and much satisfaction is evinced over his elevation to the highest position in the gift of the members.

While several recommendations for the revision of the rules for inspection were made by the Inspection Rules Committee, of which Mr. McBean of Toronto is the Canadian representative, it was decided that the rules should stand as at present, and the proposed amendments were voted down. The prevailing opinion seemed to be to leave well enough alone, and, on the whole, the rules are working out very well and to the satisfaction of the Association.

The official programme, issued by the Association, was a handsome book and contained pictures of John A McBean and John E. Banks and H. F. Holton, of Toronto, who are inspectors employed by the Association. The many friends of Mr. McBean, who for several years past has taken an active interest in the Association, believe that he will be re-appointed a member of the Inspection Rules Committee. He has been in the hardwood business in company with F. T. Verrall under the name of McBean & Verrall for the past twenty-five years. Their offices and yards since 1903 have been at the foot of Bathurst St., and previous to that they occupied quarters at Victoria and Lombard Sts. The firm handle practically every known line of American and Canadian hardwood, and in their yards are no less than twenty-five or thirty varieties from all parts of the continent.

A timber deal involving $400,000 has been closed by the Rat Portage Lumber Company in the sale of valuable limits at the south-western corner of Vancouver Island. The purchaser is John W. Blodgett of Grand Rapids, Michigan.

It is not the man who works the hardest, nor the man who works the longest that accomplishes most—it is the man who works the most intelligently.

Part of Lumber Dealer in Building of Homes

Practical Plans on How to Conduct an Aggressive Campaign in Arousing People to Erect Better and More Artistic Dwellings—Interesting the Women

We have been continually discussing what the lumber dealer may do toward better and more modern and attractive homes in his town and community instead of the old "L" shaped, the box car type of house.

Another line of endeavor that we have discussed less fully, but which is tremendously important for the reason that it can be done even when there is nothing doing in the new home line is—"Making the old home new."

We have discussed the building of sleeping porches in the spring and summer, and the making of other changes that will improve the appearance and the comfort of the old home. Help the people of your community to make their abodes more homelike at small cost, and you will be doing them a great favor individually, and will be benefitting the community and your own business at the same time.

Equip yourself for the giving of intelligent service in the rebuilding and improving line, as well as in the building of new and better homes. You can do this with the assistance of any and all of the live and active mill-work houses of the country, who are very much on the job, and are getting out excellent suggestions and assistance for the dealer to use in advising his prospective customer concerning improvements to his old home

It is not enough, by any means, for the dealer to remind a man that his home ought to be improved. It is not enough—nor even the smallest fraction of enough—for him to tell the man or woman he is dealing with that if they want to do some repairing or improving he will be glad to sell them the lumber at so much a thousand.

That man or woman does not want to buy lumber.

He does not want to be bothered with general suggestions that mean nothing tangible to him. He wants something specific. He is from Missouri. He "wants to be shown."

It is the dealer's job to "show him." How? Easy enough. That is easy enough to the man with the mental and physical energy to want to do things.

Follow the same rules of procedure at this time of the year in suggesting improvements, that we preached for selling sleeping porches, etc., during the summer months.

You don't sell sleeping porches, or sun parlors, or even wide sweeping porches to replace small and unattractive ones, at this season as a general thing.

In their place you install in your selling "gun" handsome front doors to replace unattractive ones; mirror doors for interior use, sets of French doors that will improve both the interior and exterior of the house; built-in sideboards and buffets; built-in libraries; beamed ceilings to replace plain ones; built-in door seats for the living room; broad and attractive windows to replace narrow and ugly ones; improved interior walls and paneling; new floors; beautiful wide doorways inside the house to replace plain and unattractive ones; these will start you to thinking, and you yourself will add many to it.

Use Attractive Illustrations

In starting such a campaign, look about you to see where you can get the help in the line of pictures, plans, and suggestions that you must have in order to play the game right. We do not think and are not suggesting that the dealer should be capable of designing attractive home changes—particularly interiors where artistic effort is necessary to get the right results.

We suggest that you first make up a list of the sash, door and mill-work houses that you have any dealings with, and even those whom you have not dealt with, but might. Add to that list the firms whose paint and varnish you handle. If you handle wall boards, or other lines of that kind, add these firms to your list.

Then write a short letter to each firm in that list stating that you intend getting busy with a campaign for improving the interiors of the homes of your community, and will appreciate any assistance they may give you in the way of pictures, plans, suggestions, drawings, color charts, etc., of what may be done to improve the home, and make it more attractive and cheerful. If your sash and door houses cannot help you in their line as to built-in features, they ought to be ashamed of themselves, and you ought to try elsewhere. Your paint people should furnish you handsome panels showing how the wood you carry in stock may be colored or stained to make it attractive in a variety of ways. Get together all the plan books and building helps that you can put your hands on, and thus equip yourself to give your prospect something to look at, when you talk about improving his home.

Visualize what you have to say. Point to the bare wall of his living room, and show him a picture of a cozy wall seat. Show him the other side of the room, and how well it would hold a built-in bookcase that you have a picture of. Show him attractive doorways that would well replace his bare double-door effect. Show him pictures of doors that would brighten up the interior of his house if they replaced the bare doors he has there now. Show him the things you have decided he needs, and be prepared to quote him price.

That is what counts. The automobile man shows the prospect the handsome, shiny, finished product of the auto factory, and there is no guesswork about it. He quotes the flat price, states the terms of the sale, enlarges on the merit of the car that the man is looking at—and then takes him for a ride and shows him.

The dealer has got to use this same form of persuasion just as far as it is possible for him to do so. He has got to show the prospect, has got to quote him a concrete price, and has got to give him a ride in some way or other.

Figure it out for yourself.

There is an old saying that "Jesse James got the money, even when the cotton crop failed." We don't want the lumber dealer to become a hold-up man, but we believe that he can so equip himself and so operate his brains and hands that he will do the same thing that the notorious Jesse James did—get the money whether the community is admittedly prosperous or not.

A book of handsome interiors would be a great thing for a retail lumber dealer, showing a considerable variety of home improvements that can be made in the old house. Take such a book and loan it to Mrs. Jones, who has a plain house, but is able to pay for improvements. She will read that book more studiously than her husband will read the new auto catalogue, and that is going some.

Remember the Woman

Again, and yet again, let us urge you not to overlook the woman of the house, when you are trying to sell better homes or to sell improvements for the home. She is by far the most interested person in the home, and she is the court of first and last report when it comes to improving the interior of her home.

Do you suppose there is a woman on earth who is old enough, or disgruntled enough with life, so that she would not appreciate a beautiful beveled mirror door?

Never!

There ain't no sech animal.

Then show such doors—or their pictures—to every woman in your community. Have your door manufacturer send you one or two mirrored doors, just as a starter, and also send you a little insert for your envelopes, showing a cut of that door. Put a price on that door delivered and hung in her home, and send one to every woman in your community.

It would be your best advertisement of the year.

Sell them for Christmas presents. A beautiful mirrored door costs less money than the average person believes they do. Show them the facts. The average woman would think more of a mirrored door for a Christmas present than she would of a piece of jewelry costing several times as much.

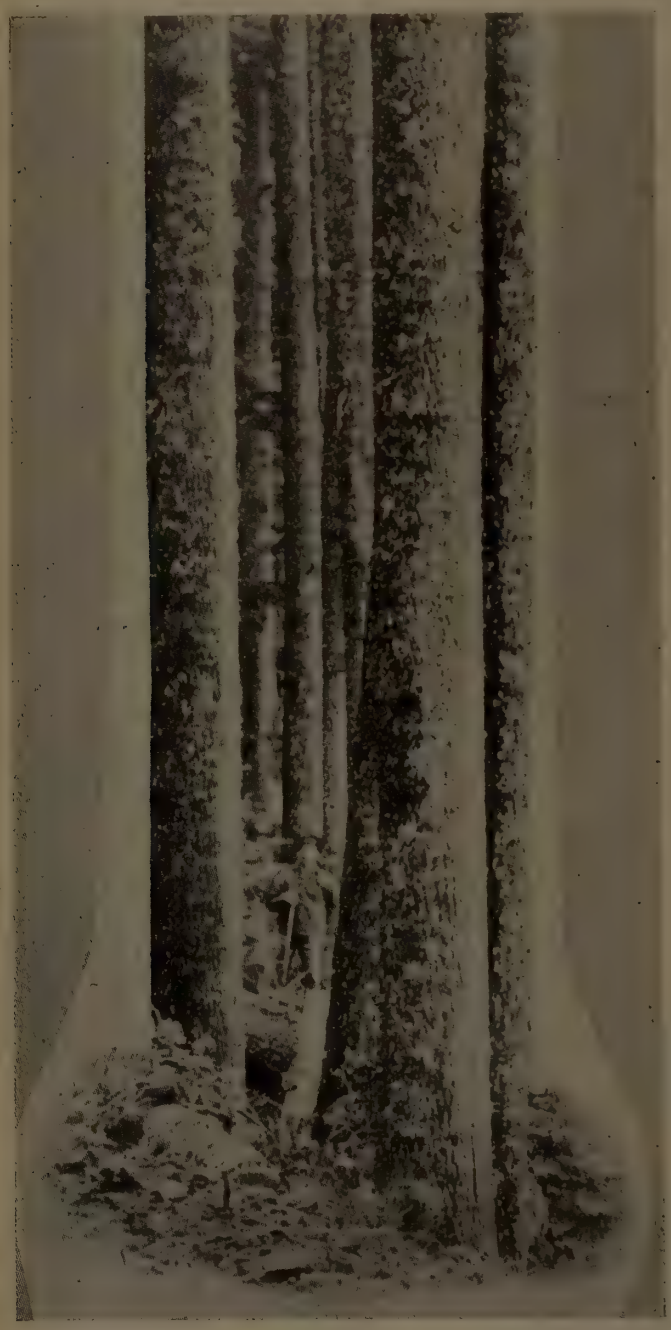
We take the mirrored door just for example. There are scores of other things in the list of interior decorations that you can sell, with the same facility and to the same advantage.

Try these things. There is nothing unreasonable about any of them, and the sale of one set of interior improvements will be a big ad for your business, and will help you sell others. Make a special effort on the first one you go after, so that you will have that one to talk about. If you do a good job of the first one, it will advertise itself, because the woman of the house is going to do that for you—and on her own behalf.—Gulf Coast Lumberman.

Varied Qualities of the Stately Hemlock

Hemlock is indeed an unusual tree, from many and varied viewpoints. It combines the drooping beauty of a forest nymph with the hardy stateliness of a forest monarch. Drooping I suppose, because just a wee bit ashamed of old Socrates and his historical cup of poisoned hemlock; hardy and stately because of its tall, straight growth as a sturdy child of the great Northern forests. Who could ask for more?

There are four types of hemlocks in the Western Hemisphere, of which the Eastern and Western hemlocks have the greatest eco-



The majesty and beauty of the hemlock

nomic importance. The Eastern hemlock ranges from Maine to Minnesota, and south to Georgia, while the Western hemlock is found from Southern Alaska to Central California and east to Idaho.

The hemlock belongs to the pine family and resembles the pine in many ways, among which is the tall straight trunk and thick furrowed bark. The branches are conical in shape, horizontal, and a bit drooping. The average growth of a hemlock is from sixty to one hundred feet in height and is covered its entire length with reddish gray, scaly bark that becomes rough and furrowed with age. The leaves are narrow, very lustrous, and small, being about one half inch long, the same size as the cones. The hemlock is generally found in the coldest regions in America, and favors damp and rocky ground and dense growth.

The hemlock gives us many kinds of timber, coarse grained and brittle and valuable for various purposes and is also felled for its thick bark. From this tannin is largely taken. This tannin is extremely valuable in leather manufacturing and contains medicinal properties. In horticultural art, the hemlock has been developed into a great variety of forms, and is featured in tree nurseries. So famous is the hemlock along these lines, that in Alaska and the far Northwest, shipments of hemlock to Europe for landscape painting was carried on extensively before the world war.

Hemlock is one of the woods that is comparatively easy to market and large quantities of hemlock lumber can be found in retail lumber yards throughout the East, Middle West, and the Northwest. There is always a steady demand for hemlock lumber, for rough construction work, where the better class of lumber is not needed.

In British Columbia the hemlock growth is said to be of a fine quality and superior to the eastern species for pulpwood as well as lumber and other products and forms almost half of the wood used in that province.

Hemlock lumber is light in color, and soft and brittle. The coarse and crooked grain of the hemlock makes it very difficult to work with. It also has very little strength or durability.

One of the greatest scourges of the hemlock are the tannin gatherers. In the search for tannin, young hemlocks, from four to six inches in diameter are felled, stripped of their bark, and left cumbering the ground. Not only are the young trees destroyed but when dryed out and decayed, invite the great fires that sweep our forest regions every year.

In a deep wood the hemlock shows some very important defects. There it forms a shaft from fifty to eighty feet in height, (without any diminition of its size, until near the summit, where it tapers suddenly, forming a head of foliage that projects considerably above the general level of the forest. The trunk is covered with dead branches projecting from it on all sides, causing it to wear a very unsightly appearance; and when the tree is sawed into boards, they are found to extend directly through the sapwood of the tree, making a hole in it as round as if bored with an auger. This is caused by the continued growth of the trunk of the tree after the decay of its branches, every year forming a new circle round the branch, but not inosculating with it, as in other trees.

When on some open rocky ridge, the hemlock is seen growing by itself, it is often clothed to the ground with its graceful and drooping branches. During a growing season when the leaves change from their spring time color of a yellow green, to an autumnal shade of greenish black, the tree is one of the most charming sights of nature.

Big Building Boom in West

Twenty million dollars' worth of new buildings in the province of Saskatchewan is the prediction of a Toronto expert who is in Regina looking over the field. There is not much likelihood of prices of building materials coming down this year. In the province it is estimated that at least 600 new residences and 200 new school houses will be built, besides business blocks, warehouses, etc. The expenditure for all Canada for 1920 for new building and construction work is estimated at $300,000,000 against a total of $190,000,000 in 1919.

Big Drive for Hoo-Hoo Members

August 9 to 19 inclusive are the dates for the great Hoo-Hoo drive, the purpose of which is to bring the membership up to a point at which we can operate efficiently and make our plans for the future development and progress of Hoo-Hoo that will justify the faith of those who have stuck with the Order through recent years, says Secretary H. R. Isherwood of St. Louis, Mo.

It is too early to go into details with regard to the plans that are being laid for presentation to the 1920 annual but the carrying out of these or any other progressive plans will depend on our having the membership necessary to provide needed revenue. This means, of course, that we must re-awaken the interest of those desirable members who have lost their good standing in the Order through failure to pay their dues; and also that we must bring into the Order a considerable number of those who ought to hold membership but who, for some reason, have not become interested.

Splendid New Mill Wiped Out By Fire

Newcastle, N. B., suffered a severe loss by fire recently when the fine new saw mill belonging to James Robinson was razed to the ground. The mill had a daily sawing capacity of 65,000 feet. The fire, which was first discovered about four o'clock, had made such headway that all efforts to combat it were futile, and in one hour the large structure and its equipment was a smouldering mass of ruins. The origin of the fire is unknown.

The firemen realizing that the mill was doomed, turned their services to the saving of the lumber piles which were in close proximity.

The well-equipped mill of James Robinson, of Newcastle, N.B., recently burned to the ground

The morning was calm, and had a wind been blowing the lumber piles which were in front of the lumber yard would no doubt have been destroyed as well. A large quantity of princess pine boards estimated at one million feet, and which were piled on the face of the wharf was also totally destroyed. The mill was built in 1919 and last season was its first in operation. It was considered one of the most modern mills on the river. It is estimated that the loss will be in the vicinity of $100,000. $61,000 insurance was carried on the mill. In the vicinity of 100 men were employed and the loss sustaned by Mr. Robinson as well as by the town of Newcastle is a large one.

Log Drives This Year Are Costly

The Mageau Lumber Co., Limited, of Field, Ont., state that they have sold their entire output for this season at a very reasonable price compared with the cost of taking out logs and sawing. They will cut about 6,000,000 ft. b.m. this summer and expect to saw during the coming winter between 7,000,000 ft. and 8,000,000 ft. Ordinary help is not too hard to get but the company have difficulty in securing skilled labor. such as millwrights, edger men and setters.

The Mageau Lumber Co. report that their drive this year has cost them more than twice as much as in former years on account of the lack of water and unfavorable winds all through the month of May and the first part of June. The late rains in June, however, helped them get out a good proportion of their logs and they have now enough to keep their plant running steadily. The firm say that they receive inquiries and demands every day for lumber.

Sawmills Are Active on Pickerel River

There are at present three sawmills in operation at the Lost Channel on the Pickerel river, Parry Sound district, Ont. The large new mill formerly owned by Lauder, Spears & Howland, is being operated by the Schroeder Mills & Timber Co., who expect to cut in the neighborhood of ten million feet, principally white pine. The lumber, lath, etc., is being hauled out over the Key Valley Railway to Pakesley, Ont., and piled. Cole's Mill on Key Lake near the Lost Channel also has a stock of approximately two million feet of white & Timber Co.

The firm of Bruce and Peart are getting their drive down the Pickerel River from the vicinity of Loring, where the logs were purchased. This timber, principally basswood, hemlock and hardwood, will be manufactured by their mill, situated on the Lost Channel.

Very little shipping is being done from this point at present. Bruce & Peart are shipping a few cars of basswood for American points. Labor is not at all plentiful, but no trouble has been experienced in manning the mills so far.

The log drives of the Schroeder Mills & Timber Co. are making good progress on both the Pickerel and Key rivers and should be through by July 1st. Labor, supplies and feed are considerably higher than previous years, and it is doubtful if there can be any material reduction in lumber prices until these conditions get back nearer to normal.

Unless unforseen conditions arise in the lumber industry in the near future, there will be considerable activity in the logging operations in from Pakesley Station, Ont., starting about the middle of August. The Schroeder Mills and Timber Co. expect to have seven camps operating during the coming fall and winter, and Messrs. Pratt & Shanacy, of Midland, are putting in one or two camps on a limit which they purchased recently.

A Handy Reference Publication

Wm. B. Mershon & Co., of Saginaw, Mich., have recently issued two attractive and handsomely-printed catalogues describing band sawing machinery, vertical and horizontal, single and twin types. These books should be of interest to anyone engaged in the lumber business in any of its branches, whether they are in the market for new machinery or not. The catalogues are admirably illustrated and complete in every particular and contain much timely and valuable information of the well-known lines turned out by the Mershon Co. Anyone dropping a line to Wm. B. Mershon & Co., Saginaw, Mich., will receive a copy of these splendid pulbications which should be preserved for future reference.

Lumbermen Want Drop in Log Prices

Though the price of logs remains about the same, there has been a considerable drop in the prices of lumber in British Columbia, and the mills are now engaged in arguing with the loggers in an endeavor to reduce the price of logs in ratio to the drop in lumber according to gossip in the lumber trade. It is claimed by some mills that loggers are getting about a 100 per cent. on their logs and it is thought by many that log prices will be lower soon, says a recent despatch.

At present it is reported that British Columbia fir lumber market for railroad shipments has dropped about $7 a thousand feet. Three months ago when the peak of the high prices was reached shiplap was bringing $40 at the mills. Now it is $33. This same material was sold before the war at $18 to $21 a thousand. No. 1 common rough timbers are now about $34, and were $40 three months ago. Rough inch boards are only produced by the small mills. They sell at about $28 to $29. Dimension stuff, S 1 S1 E, reached $39 at the highwater mark in February and March, and has slipped back to $32.50.

In the cedar shingle market the drop in price has been even more pronounced. It is said by some that one cause for this has been that the price was raised to such an extent that it enabled the patent roofing companies to undersell the cedar shingle men. Shingles known to the trade as 5X, the best grade manufactured for the United States market, were $7.50, but now are $5.25. The Canadian grade, thinner than the United States market standard but of a similar quality, was $6.25 and is now $4.10.

British Columbia prices, it is said, are set by the United States markets and the question as to whether the present lumber prices will go still lower depends on the United States mills. If the production of the mills across the line is sufficient to meet the demand. it will mean that there will be an overproduction of lumber in Canada and a resultant drop in prices. On the other hand, if the United States cannot supply its own requirements, the Canadian market will remain firm at figures close to the present prices.

The export trade is in better condition than the railroad trade. Export mills are finding difficulty in obtaining ships to meet the demands. The foreign market is hungry for lumber, and the necessity is for vessels. Consequently the export prices will remain firm at slightly better than rail prices. Lumber for export brings the higher prices because of the fact that only most select grades are exported, and there is an additional overhead on export material caused by wharf dues, delays in shipment and loading, and possibly loss to mills in long waits for ships.

Woodsman Proves Right to Award

Arthur Trottier was awarded $79 compensation for total temporary incapacity and $1,832.18—being the capital of an annuity of $144.38—for permanent partial incapacity for work, by judgment of the Superior Court, Montreal, rendered by Mr. Justice Howard under the provisions of the Workmen's Compensation Act, against Trottier's employees, the Shepard and Morse Lumber Company, Ltd.

Trottier was working as an axeman in a lumber camp on the Kipawa River, Quebec, and while in the act of chopping down a tree a branch struck him in the eye, the sight of which he has lost as a consequence. The only issue was whether right of action lay under the Workmen's Act.

Justice Howard: "It may be stated without discussion that, according to the settled jurisprudence of this province, such an enterprise as that carried on by the company defendant comes within the provisions of the Workmen's Compensation Act."

Breezy Budget of News From the West

All employees of mills and logging camps east of Hazelton, B.C., went on strike recently for an eight-hour day and $4 a day with board as a minimum.

The Thurston-Flavelle Lumber Co., Port Moody, B.C., have been authorized by supplementary letters patent to increase their capital from $250,000 to the sum of $1,000,000.

A new industry in the form of a lath mill has located in North Vancouver. The proprietors of the mill are H. Parkin and J. Scott and Mr. H. Stobles.

A. Robertson, of the Robertson & Hackett Sawmills, Limited, Vancouver, was recently appointed president of the Woodworkers' Section of the Manufacturers' Association of British Columbia at the annual meeting of the section held recently.

Capitalized at one million dollars, the British Columbia Spruce Mills, Limited, of Wattsburg, is actively engaged on preliminary construction work on a sawmill and a planing mill that will be the largest in the interior, having a capacity of 250,000 feet per day, or 35,000,000 to 40,000,000 feet per year.

Lawrence & Workman, owners of the Stewart sawmill at Stewart, B.C., have recently enlarged their plant, which now has a cutting capacity of 20,000 feet per day. The Weyerhauser timber limits on the Marmot River have been taken over and will be logged off. Ultimately an export business is planned.

The Langley Prairie Mfg. Co., Limited, New Westminster, B.C., were recently incorporated to manufacture and deal in saw logs, shingle bolts and lumber of all kinds. Capital $100,000. W. Brandon and J. Gibbon, both of the municipality of Langley Prairie, B. C., are two of the incorporators.

Shingle packers and weavers of the Canadian Western Lumber Co. at Fraser Mills. went on strike recently, and the shingle mill was shut down. Many shingle mills in the West have closed temporarily owing to the collapse of the market. Shingle weavers' wages have advanced in the past year from about 17c a thousand to about 27c.

According to an official statement issued by the Hon. T. D. Pattullo, Minister of Lands for British Columbia, timber sales completed during the month of April last amounted in value to $88,878 as against $25,295 for the correspodinng month in 1919. For the month of April, 1918, however, the value of completed sales did not exceed $6,849.

Among the companies recently incorporated in British Columbia are the following:—Northwestern Box Co., Limited, Vancouver, capital $10,000; Thunder River Lumber Co., Vancouver, capital $200,000; Palmer-Diven Logging Co., Vancouver, $200,000. An extra provincial license has been granted the E. Bashan Lumber Co., Limited, of Edmonton, capital $100,000.

The White Rock Tie & Lumber Co., Limited, White Rock, B.C., has begun operations. The plant will handle dimension timbers, ties and shiplap lumber and will turn out 20,000 feet a day. The timber supplies, from which the company will do its own logging, are conveniently located and accessible, and there is ample supply to keep the mill running a number of years. G. M. Thrift is the manager of the company, all members of which are citizens of White Rock.

The McLaren Lumber Co. have completed a preliminary survey on the banks of the Old Man River near Macleod in Southern Alberta, and intend building a large new sawmill. It is proposed to erect a dam across the river. Col, Peuchen, head of the McLaren Co., has been in Macleod for some time in connection with the new project. The company ask certain concessions from the town, including a site, free power for running machinery during construction, free water, fire protection, a proportion of the cost of building a necessary railway spur and a fixed rate of taxation.

Among recent incorporations in British Columbia are the Lorne E. Butt Lumber & Shingle Mills, Limited, Vancouver, capital $25,000; Munson Sawmills of Kelowna, $10,000; Killarney Loggers, Vancouver, $25,000; Georgia Lake Logging Co., Victoria, $100,000; Osprey Lumber Products, Vancouver, $75,000. An extra provincial license has been granted to J. E. Morris Lumber Co., of Seattle, with a capital stock of $100,000.

The Massett Timber Co. are conducting investigations at Graham Island with a view to the establishment of a paper mill on the company's property there. The water-power is being tested and from present reports the indications are in favor of going ahead with the project. The companies claim that they are in a position to deevlop from 5,000 to 10,000 horse power. The firm have five hundred men at work in its logging operations on the island. Lumber is being shipped to the United Kingdom and various parts of the Dominion.

A timber deal involving $400,000 has been closed by the Rat Portage Lumber Company, in the sale of valuable limits at the southwestern corner of Vancouver Island. The purchaser is John W. Blodgett, of Grand Rapids, Michigan. It is understood that it is the intention of the purchaser to utilize and extend the railway on the property and to erect a mill there. The timber is chiefly fir, with some cedar.

Scores Metric System in Lumbering

Propaganda originating in the World Trade Club of San Francisco, Cal., has been very active for some time in an endeavor to secure laws which will compel the use of the metric system of measures in the United States. Much literature has been circulated and it has reached all parts of the country. Its purpose has been chiefly to reach persons, associations, and societies, and through them to influence Congress to enact laws making the use of the metric system compulsory; thereby replacing most of the measurements now in use in this country, such as inches, feet, miles, acres, quarts, gallons, barrels, ounces, pounds, tons, and many more with which the people have always ben familiar, says the "American Lumberman."

That propaganda has gone far, and those who have considered it as something harmless and not calling for any particular action one way or the other, may be mistaken. Those who desire a change from what we have to the metric system have nothing to fear, but that is not true of those who do not desire such a change. The danger is that they may remain careless and unconcerned until they suddenly discover that the compulsory use of the metric system has been brought about by an act of Congress, simply because the metric advocates have been active and others have remained indifferent. There is real danger that this may happen.

Do lumbermen want this metric system substituted for what we have? If they do, they will help get it by remaining passive, and if they do not want it their interest lies in making their opposition known. They should bear in mind that the propagandists are not seeking an optional law, permitting the use of the metric system by those who desire to do so, and the continued use of our present measurements by those who prefer them. We have had that law in the United States since 1866. Anybody is free to use the metric system now; but the proposed law is to be compulsory, and if it succeeds, our present measurements will be outlawed.

Some people might make the change without very great inconvenience; but how would it affect the lumber business? The substitution of new machines for those now in use would be costly. Every machine and apparatus built to cut or dress lumber on the basis of feet and inches would be replaced or remodeled to measure by meters and fractions of meters. All measuring rules, tapes, and gages would go to the junk heap, for they could no longer be employed. All price lists based on dimensions would have to go. Charts, tables, formulas, for rapid calculation and measurement would disappear; and others, based on the meter, would be needed, at a great expenditure of time, money, and patience. The terms of deeds, leases, and conveyances, dealing with land, would be written in a new language where the words acre, rod, foot, chain, and mile could not be employed. Voluminous rate tables dealing with transportation, would become useless. About the only measurement that would remain as it was before would be money, the dollar, dime, and cent.

That is only part of it. The new system would have to be learned by everybody from the president of the company down to the men at the sorting chains and in the yards. They think in feet and inches now; but they would need to acquaint themselves with another kind of thinking. Advocates of the metric system say it is easy to learn. Doubtless a person of average intelligence could learn it in time, but the point is, is the change wanted? Is it worth while? Would its cost in money and time be justified? If lumbermen think it would not be a good thing to change to the metric system at this time, they ought to make their position known without delay.

Two Pulp Plants for Fort William

Word received from Fort William is to the effect that there are bright prospects for the establishment of two new pulp and paper industries in that city within the near future. The estimated expenditure is around $4,000,000. It is reported one company will extend $3,500,000 in the erection of a plant and the other, which will be a smaller one, will build a half million dollar pulp mill. It is understood the concerns have selected the necessary limits, secured their sites, and agreements made by the city are pretty well understood and satisfactory. One pulp plant will have a capacity of 100 tons and the other 35 tons, and it is pointed out that neither of them happens to be the Great Lakes Pulp & Paper Co., which proposition still looms in the offing. Both propositions are backed by substantial interests.

Sun parlors and sleeping porches will soon be in demand. Are you ready to supply them?

Panoramic view of Lake Nipissing, French River and North Bay, which district will be visited by the retail lumbermen of Ontario on July 30-August 2

Ontario Retailers Going to North Bay

The annual outing of the Ontario Retail Lumber Dealers' Association will be held at North Bay and Lake Nipissing on July 30th and 31st, August 1st and 2nd. Secretary Boultbee, of Toronto, is making all arrangements for the trip and it is expected that the attendance will be the largest on record.

It will be remembered that last year the dealers had a delightful visit to Midland and Penetanguishene, and a splendid sail up the Georgian Bay to Parry Sound, where some fishing was indulged in with more or less success. This year all the enjoyable features of 1919 will be in store for the excursionists, who will leave Toronto by the evening train on Thursday, July 29th, arriving at North Bay on Friday morning, July. 30th. Mayor Ferguson, of North Bay, has assured the guests of a cordial welcome and A. J. Young, of the Young Lumber Co., North Bay, and others are ably seconding the proposition.

The details of the trip are not yet complete but a tentative outline is as follows:

Thursday. July 29th—Leave Toronto by evening train for North Bay.

Friday, July 30th—Arrive at North Bay. Breakfast at Pacific Hotel.

9.30 A.M.—Leave by motor for Callander to visit the mills of J. B. Smith & Sons and A. B. Gordon & Co.

12.—— noon—Lunch at Callander. Afternoon, back to North Bay and visit the plant of Wm. Milne & Sons at Trout Mills, followed by a fishing trip on Trout Lake.

Saturday, July 31st, A.M.—Leave by train for Cache Bay to visit sawmills of George Gordon & Co., then motor to Sturgeon Falls to see the pulp and paper enterprises of the Spanish River Pulp & Paper Mills.

12.00 o'clock noon—Lunch at Sturgeon Falls.

2.00 P.M.—Leave by steamer "Northern Belle" for French River and Chaudiere Falls, remaining there overnight and Sunday, August 1st.

Monday, August 2nd (which is Toronto's Civic Holiday as well as the Civic Holiday of a number of other cities and towns in Ontario) will be spent in North Bay, and arrangements will be made for fishing, sightseeing, motoring, etc.

Monday evening—Return to Toronto by night train.

It is expected that the majority of the delegates from western Ontario and Toronto will assemble in Toronto for the trip, while those from Ottawa and district will proceed to North Bay by train from the Capital. The official programme will be issued about the middle of the month.

John B. Reid, of Toronto, president of the Association, and Secretary Boultbee, state that all retail lumbermen will be welcome, whether members of the Association or not, and that this will be the best trip ever.

What French River Improvement Means

(See Illustration at top of page)

Give Northern Ontario her waterway, and she gives "The National" its most economic grain route.

Effects savings by water borne coal from Erie ports of $1,265,726.-06 yearly.

Provides cheaper transportation for Northern Ontario's $70,-000,000 yearly exports, mainly going to Great Lake ports.

Enhance value of standing white pine and spruce and paper manufacture $40,000,000 by water borne rates.

Generates elctric power at the three locks, which is urgently required. Aside from savings, power receipts alone will pay 5 per cent. interest on total construction.

Affords "National," C. P. R. and G. T. R. new grain routes to Montreal, shorter than Buffalo to New York haul, thereby diverting the flow of 66 per cent. Canadian wheat now going to American Atlantic ports.

New Montreal Lumber Company

The Rolland Lumber Co., Limited, with headquarters at 62 St. James Street, Montreal, has just been incorporated. The originator and main stockholder is Mr. Louis S. Rolland, formerly secretary of Blair & Rolland, Limited, of Montreal. Mr. Rolland resigned his position in December 31st last, to go to England and the Continent for one of the largest import, export and banking organizations, in connection with their lumber department. Upon returning to Montreal in April last, he devoted his time towards completing his mission, upon termination of which he formed the Rolland Lumber Co., Limited.

The management and general policy of the company will be solely in the hands of Mr. Rolland. Stocks of lumber to be carried will consist of a range of Canadian spruce and white pine in assortments of thicknesses and widths.

Big Timber Exhibition in London

The Department of Overseas Trade is organizing an exhibition of timbers grown within the British Empire, to take place at the Holland Park skating rink, London, from July 5 to 17.

The main object of the exhibition is to bring prominently before architects, inspectors, firms who have to specify timbers in their contracts, as well as the users and consumers of timbers, the full range of Imperial-grown timbers, and especially those timbers which up to the present are only very slightly, if at all, known in this country. At the same time the exhibition will demonstrate the chief uses for which such timbers are suitable.

The classifications embraces:

(a) Specimens of timber; (b) Exhibits demonstrating the various uses to which timbers are put—viz., floors, panelling, staircases, furniture, plywood, and articles of everyday use; (c) Wood-pulp.

Mr. Shreiner Carried off Price

W. C. Schreimer, of Anderson, Schreiner & Mawson, wholesale lumbermen, Toronto, attended the recent gathering of the National Hardwood Lumber Association in Chicago. There were three large handsomely framed pictures of trees exhibited by the "American Lumbeerman," and prizes were awarded to the delegates who could name correctly the varieties shown, their physical features, where grown, etc. Mr. Shreiner has a practical acquaintance with all kinds of woods and at once spotted the pictorial specimens as those of red cherry white oak and soft elm. He also told where these trees were grown and to what uses the lumber from them was put. Mr. Shreiner was successful in carrying off second prize and is now receiving the congratulations of his many friends in the industry.

It is stated that a number of delegates were arboreal authorities enough to know that the pictures represented trees, but that was as far as their knowledge extended.

Lumberman Will Confer With Railways

A. E. Eckardt, chairman of the Transportation Committee, Wholesale Lumber Dealers' Association, Toronto, and D. C. Johnston, a member of that committee, were in Ottawa recently, where they appeared before the Dominion Railway Board in opposition to the new railway tariff, No. 14.

Several amendments were pressed for, as outlined in the last edition of the "Canada Lumberman." The arguments of the deputation were listened to by the Board with considerable interest and the one which seemed to arouse the most contention was the following respecting scaling: If delivery agent is unable to give consignee scaling particulars of a car that has originated at a track scale station, or has passed en route a track scale, the Railway Company must accept payment of freight on the basis of minimum weight. The Railway Company to have the right to make amended claim as soon as scaling particulars are ascertained.

It is understood that the lumbermen will have a conference shortly with the representatives of the Canadian Freight Association in an effort to come to an amicable adjustment on the points raised, and if the outcome is not successful, it is probable that another hearing will come up before the Dominion Railway Commissioners.

Wood an Imported Luxury in France

France is in a situation where the limited supply and high cost of timber have placed wood practically in the class of imported luxuries, therefore every part of the tree is used, down to the small twigs which are bound in fagots. Notwithstanding the intensive care of her forests, France is still compelled to import from 30 to 40 per cent. of the timber which she requires. The effect of the high cost of timber upon French industries and upon the convenience and comforts of her farming population is very apparent. In fact, most French farmers are still getting on with the identical buildings and farm structures which their great-grandfathers used before them. The per capita consumption of lumber in France is not over 100 board feet yearly or less than one-third of what the average American uses. The shortage of lumber and its high cost is one of the great industrial handicaps of the country.

British Columbia Makes Calls

Geo. A. Gall, representing the Piercy Lumber Company, Limited, of Vancouver, B. C., was in the city for a few days calling on wholesalers and retailers and acquiring information regarding market conditions in this big distributing centre, says the "Mississippi Valley Lumberman" of Minneapolis.

He has no first-hand information, he said, concerning trade conditions in the lumber producing district of British Columbia. He left home about the middle of May, stopping over at various points in the prairie districts in the northwest provinces. At the time he left, the market had began to sag and he understands from letters and telegrams received that there has been quite a decline in prices in the last two weeks. When he left Winnipeg, dimension was being offered on the basis of $40 at wholesale. There had recently developed quite an intense industrial war between the retail lumbermen of that metropolis.

The cutting of prices, instead of stimulating trade, had shut off considerable buying. Customers who had been in the market almost continuously, frankly tell the dealer that they are going to hold off and get the benefit of still lower prices. Mr. Gall says that there is some buying being done by the country yards, although most of them have a fair stock on hand consisting of from eight to twelve cars at the small points and 25 or more at the larger ones. Crop prospects, however, were very encouraging and the indications are that they will have a normal retail trade and the dealers will be compelled to place orders a little later in the season.

The wholesale shingle market on the other side of the line had been very badly demoralized. The active demand and the high prices being paid for red cedar shingles by the American trade, had resulted in a large number of small mills having beeen built in British Columbia. In many cases they secured their shingle bolts from cut-over lands. When the Canadian Pacific had put an embargo upon their cars going off their line, the American market was practically closed to the large and small mills. The little operator couldn't afford to suspend operations so he has had to sell his output in the home market at anything the buyer wanted to pay. Several of the large plants, however, had closed down and as they are pretty well off financially there is no reason or inclination on their part to glut the market. He said the same conditions prevailed with the producers of fir lumber.

Mr. Gall was formerly a resident of Toronto and is well-known in journalistic and advertising circles.

Wholesalers' Picnic to Grimsby Park

The annual outing of the wholesale lumbermen of Toronto will be held at Grimsby Park on Thursday July 15th when, it is expected that a large attendance of all the members of the industry, their wives and families, will take part in the event. A. E. Clark, on whose invitation the picnic will be held, has an attractive summer home at the Park and will give a warm welcome to all. Arrangements are being made for lawn bowling and tennis and also a baseball match between lumbermen representing teams east and west of Yonge St. L. D. Barclay is chairman of the Picnic Committee, and

L. D. Barclay, Toronto, chairman of the Wholesale Lumbermen's Picnic Committee.

from reports received, this year's outing should be a hummer. There will be sports of all kinds and entertainment for the ladies as well as the gentlemen. The lumbermen and their friends will take the boat from Toronto to the Park and return.

L. D. Barclay, the live chairman of the Picnic Committee of the Wholesaler Lumber Dealers' Association, says that the jaunt on July 15th will be the best ever. The boat will leave Toronto at 8 o'clock for Grimsby Park and returning will leave the park at 7.30 in the evening.

Annual Hoo-Hoo Gathering in St. Louis

The twenty-ninth annual meeting of the Concatenated Order of Hoo-Hoo will be held at St. Louis, Mo., September 8th, 9th, and 10th. It is expected there will be a splendid representation from every district, and secretary-treasurer H. R. Isherwood says they anticipate bringing together one of the greatest assemblies of all branches of the lumber and allied industries ever known. An attractive program is being arranged. Many important subjects will be featured and discussed, and with the dates of the National Retail Lumber Dealers' Association joining in to the Hoo-Hoo dates, an excellent opportunity is presented for members of both organizations to attend the two great gatherings.

If you have the will power to do a thing, you will soon acquire the man power.

How about that income tax? Better get it off your mind. Only a few days left.

Why All Grades Should be Standardized

Editor, Canada Lumberman:—

I have noticed in recent editions of your paper various interesting articles on the grading of lumber, and am pleased that you are devoting considerable space to this instructive subject. It is one to which too much attention cannot be given at the present time in view of the many misunderstandings that arise and the wide differences of opinion that exist in many quarters.

I wish to give you my ideas of the methods which I think should be employed in grading lumber or standardizing grades, if desired. I have outlined these only in the rough and think I have provided for all that is necessary; in fact one or two less might do fairly well. There are many names of grades handed down through time to cover the particular uses to which lumber is put, and it will do good to continue the use of these, such as good sidings; good shorts; good strips; No. 1, 2 and 3 cuts; shelving; No. 1, 2 and 3 common; No. 1, 2 and 3 dressing, fine dressing; common dressing; No. 1, 2 and 3 shelving; common; box; No. 1, 2, 3 and 4, and if making two grades out of No. 3, the top half could be called "Selected No. 3," but I prefer using the present names with which everyone is familiar.

Grading of lumber, standardizing grades to suit all kinds of timber sawn at saw mills and graded on trimmers at mill to suit all markets, when shipped by making the grade along natural lines.

Good, or first quality, or No. 1 deal.

No. 1, 2 and 3 cuts.

Shelving, fine dressing, or No. 2 deal.

No. 1 barn, best half of No. 3 deal.

No. 2 barn, poorest half of No. 3 deal.

No. 3 barn, No. 4 deal. Coarse common and good sound box, No. 1 W.1S.

Box cull, coarse box which have mill cull defects, and No. 1 mill culls.

Mill culls, 33 per cent. of low end present mill culls and top end of 0 culls which is a practical No. 2 mill cull grade, or about average 50 per cent. sound cutting.

O culls, or dead culls, or No. 3 mill culls. Under 50 per cent. cutting and bad rot.

In making cull grades all depends on manufacture, as to how much you rip, trim or cut to get soft rot out, when the grade gets below a No. 1 mill cull. The cut up grades are in a class by themselves, depending on the amount, or percentage of profitable factory clear cutting in each piece largely, with the balance of the piece serviceable for smaller sound cutting, and short clear cuts, but no cull lumber practically.

No. 1 cutups averaging 2/3 profitable factory cutting.

No. 2 cutups averaging one half profitable factory cutting.

No. 3 cutups averaging 1/3 profitable factory cutting.

No. 4 cutups averaging ¼ profitable factory cutting. This No. 4 cutting is only made in special cases and is always found in No. 4 deal quality.

The deal grading is the basis of inspection of white pine lumber, and you cannot get away from the lines providing the grades, without getting in trouble. Not following the natural dividing line of grades, makes the grades not uniform, and means no inspection at all. I have followed the dividing lines of deal grading, just referring to No. 1 deal, as I think when people pay such a high price for it, they should not receive pieces with so many knots, even fine dressing knots, and one face lumber, and should be at home in No. 2 deal.

The No. 3 deal has a range of two grades, and there is a big difference in a piece around the very top end, close to the line of No. 2 deal grade, or a liner between, or a line piece that you put one in upper grade, and the next like piece in lower grade, and a piece that is on the line of the low end of No. 3 deal, or liner on the No. 4 deal.

Therefore, to suit all markets, I would make two grades out of No. 3 deal, dividing into No. 1 and No. 2 barn. The reason for taking coarse box out of No. 4 deal is that knots wont dress and stay in and cull defects, splits, worm holes and such would be better with No. 1 mill culls for box uses, it being a grade that part is better cut up on account of hole defects and hard red streaks. The No. 2 cull makes a good sheeting for rough purposes. The No. 3 mill cull all depends on the manufacture, what kind of a grade it is, but is useful for many purposes. No. 2 deal and No. 4 deal grades are natural grades and do not need any changing except to low end out of No. 1 deal into No. 2 deal and rough box out of No. 4 deal into box culls.

Every lumberman in the Eastern export and U. S. and Canada, has been following the above lines, and that is what should be standardized. It would be a simple matter, and take only a short time to make the grades right. Views with a moving picture machine should be taken of one side of all pieces and then of the other side. These pictures should then be put in a book, defining all defects in each grade, and everything pertaining to it, and also pointing out all United States eastern grades, and all exports grades, showing how they fit in to our Canadian grades. We could also treat with the manufacture of lumber, defining everything pertaining to the sawing and each operation in mill, grading, piling, shipping, sizing, etc., in fact showing how lumber at each large mill is graded, piled and shipped.

It appears to me that a book setting forth all this in detail, to every lumberman doing business, would be worth $50.00 as its value would be priceless.

At the Chateau Laurier recently, an old lumberman friend of mine said he had been in Ottawa a week trying to get a few cars loaded. He could not depend on the man measuring to make the grades right to suit the customer, although the firm and the man measuring were willing to ship the product right.

Many lumbermen have to leave their offices at present to try and get lumber shipped, waiting on cars and losing time, when such a book I speak of would train any number of men to ship and grade to suit the world's market.

I could do this and make the book as far reaching as was necessary, backed up by the most practical lumbermen doing business for the past thirty years or more,—men who are recognized authorities as to the grades put up by the best firms in Canada and the United States.

The "Canada Lumberman" could sell such a book to every man in any line of the lumber trade, and any firm could not get a better investment for the money. Just one week travelling on the road to-day and $50.00 is spent on account of the confusion of grades, waiting for cars, as a man has to be sent to look after the shipment. There are so many misrepresentations of stock, misunderstandings, and the high cost of doing business, all on account of no uniformity. The market is short of many specialties and lumber is manufactured with which the market is oversupplied. This all shows that no one is keeping in touch with the market needs, and the cutting of lumber is going on without the mills knowing what to cut that will sell readily. We should not pile up lumber that will lie on the yard for years unsold.

I know a good book is needed and with my thirty-two years' experience along these lines, I could carry out the important work. With the use of a good moving picture machine I certainly could do all in a practical manner. I would do the grading with, say, two men to handle the lumber at the mill or sorting yard when they are shipping or grading. A trip could be made to all mills of large firms, making it cover all necessary lines and giving demonstrations in every district once a year, thus affording lumbermen and inspectors a chance to brush up on any point on which they are in doubt. It does not really matter whether the manufacturers standardize grades or not. Wholesalers and buyers of lumber, after they have bought, can ship out as they like to suit their customers. There is a market for such a book that cannot be turned down on account of wrong grading. I know of no better investment for the money for employees of each firm, and young men could learn in four months what it new requires the average lumberman half a lifetime to master and some never get it all. They do not have the opportunity to travel. I have tried roughly in this letter to touch upon some things pertaining to lumber, but in a book everything would be covered so that there would be no doubt on the subject.

I am well known in the lumber trade, and can perform a good service and effect a big saving along the line mentioned. I have been out of the game a while on account of sickness but am fit again and ready soon to get back into the work. A great waste could be eliminated and a big saving effected each year if such a book was prepared and it could all be done in a short time at a comparatively small cost. Standing timber is being sold at so many prices, different dues, ground rents and conditions, that it requires a lot of looking after. So many different log scales are confusing, and sales are

spread over so many years and a different price, that if it keeps on that way, it will take an army of scalers and clerks to look after it all.

Grades of white pine lumber, manufactured and shipped to the Eastern markets and for export and terms used:

Uppers—No. 1 upper, No. 2 upper, No. 3 upper.

Selects—No. 1 selects, No. 2 selects, No. 3 selects, fine common.

Pickings—Knotty No. 1 cutups or shop lumber, Knotty No. 2 cutups, Knotty No. 3 cutups; No. 4 cutups, or cutting box, Mill cutups, Fine common.

Shelving—No. 1 shelving, No. 2 shelving,

Dressing—No. 1 dressing, No. 2 dressing.

Common—No. 1 common, No. 2 common, No. 3 common, Smooth common, Coarse common and good box, or Coarse common and sound box, Box, Flat box, Box culls, Mill culls, dead culls, scoots, rascals, No. 1 mill culls. No. 2 mill culls. No. 3 culls.

Panel boards—No. 1, 2, 3, 4 and 5 boards, Clear and clear face, First, second and third base boards, Bright saps, Good saps, Good stained saps, No. 2 stained saps, Wormy saps, Wormy box, No. 1 barn boards, No. 2 barn boards, No. 3 barn boards, Red knotted No. 1, 2 and 3 barn, Shakey clear and shakey box, Farmers clear and Shakey No. 1, 2 and 3 cutups, Shakey dressing and selected mill run, Star vessel boards, Stained shelving and better, Stained dressing, S. A. shippers, No. 1 W.I. shippers, No. 2 W.I. shippers, Australian 1st, 2nd and 3rd shelving. No. 5, No. 6, No. 7, No. 8 and No. 9, First strip, second strip, third strip, dressing strip, S. C. strip. Box strip, cutup strip, No. 1 and 2 moulding. Good short, strip and siding, Good std. saps strips and No. 2 std. sap strip. Good short, strip and siding. Selected, cuts of good strip, short and siding. Shipping culls, No. 1, 2, 3 and 4 deals. Regular out grade. Outlaw grades or pieces Match stock. Piano Key stock. Organ key stock. End stock. Door stock. Quartered good squares and common squares. Rift grain and quartered stock. Selected stocks and mill run. Tank stock. Bracket plank. Silo stock. Roller Shade stock. Fence rail stock. Picket stock. Step plank. Paving stock. Crating stock, specials.

Yours, etc.,

Moses H. Haney.

270 Bronson Ave.,
Ottawa, Ont.

Sitka Spruce Suitable for Britain

To ascertain to some degree of accuracy the timber resources of the British Empire; to devise means to secure adequate supplies for Empire needs, and to enable the United Kingdom, which imports more timber than any other country in the world, to derive a larger proportion of her imported timber from the British Dominions, are some of the big questions which will be discussed at the Empire Forestry Conference in London this month.

Mr. D. Roy Cameron, officer in charge of the Dominion forest service in the British Columbia railway belt, with headquarters at Kamloops, is one of the delegates.

"Great Britain's experience in the late war has taught her the absolute need of conserving the timber supply. Measures are now being taken to go in for reforestation work on a considerable scale by the British Government, particularly in Scotland," said Mr. Cameron. "It may not be generally known that last year through the Dominion forestry department, half a ton of Sitka spruce seed was shipped to the British authorities. As there are 100,000 seeds to the pound. it will be clear that this represents a very large number of trees in embryo. The Sitka spruce has been found a most suitable tree for the British climate. This year they have asked for three times as much Sitka spruce seed, as well as for Douglas fir.

"While it is greatly to the interests of the importers of Great Britain that the timber resources of the Empire should be conserved, the advantage of this conference will be mututal in that it should tend to give a great impetus to inter-imperial trade in timber of all kinds. From Great Britain's point of view the war has shown that the national safety demands that a supply of timber be assured, even if the economic situation does not call for urgent meeasures," said Mr. Cameron.

Canadian Wood for Furniture Making

A leading western Ontario furniture company, in a recent letter in regard to the use of more Canadian woods in the manufacture of furniture at the present time, say that Canada has several fine furniture woods, like birch, maple and elm, which are now being used in greater quantities then ever owing to the scarcity and high price of such imported woods, as mahogany, oak, gum, etc. The firm add:—"The great trouble appears to be that the Canadian sawmiller will not put up and offer the lumber to the furniture manufacturers in proper grades. Our lumbermen insist on sawing the best part of the log into sizes not suitable for the furniture trade, and the culls and grades, not adaptable for export, they want to sell to the furniture producers as "log run" and "common and better," at about the same price as they get for the best of the log. The Canadian furniture trade are getting tired of using "Canadian" culls and purchase in preference American graded stock for then they know what they are getting."

Representative Western Lumberman

Mr. H. H. Ross, of the Ross-Saskatoon Lumber Co., with headquarters at Waldo, B. C., is one of the most widely-known representatives of the industry in the Pacific Coast province. Although born in Montreal in 1875, Mr. Ross has spent practically all his life in the West, being educated at Whitemouth, Man., and in Winnipeg. For the past fifteen years he has resided in British Columbia and has become identified with a number of leading organizations. He is president and director of the Community Lumber Co., at Lethbridge, Alta., president and director of the North Arm Lumber Co., of Vancouver, B. C., and also head of the Mountain Lumbermen's Association. Mr. Ross resides at Waldo.

H. H. Ross, Waldo, B.C.

The Capital Stock of Riordon Merger

According to an announcement made yesterday, tne capitalization of the new Riordon amalgamation will be $12,401,000 bonds (including those of subsidiaries), $10,000,000 of 8 per cent. cumulative first preferred shares, $10,000,000 of 7 per cent. convertible second preferred shares and $27,000,000 of common shares.

Of the first preferred shares of the new Riordon Company, $1,500,000 par value will be held by the old Riordon Company to offset their $1,500,000 7 per cent. preferred shares now outstanding.

A further $1,500,000 has been by the Royal Securities to an American syndicate composed of Parinson & Burr, E. H. Rollins & Sons, and Coffin & Burr, of Boston and New York.

The balance is being offered privately by the Royal Securities, any unsold balance to be offered for public subscription.

The present capitalization of the old Riordon Company remains outstanding, but the payment of the bonds will be assumed by the new company, so that the old company will become a holding company of the shares received from the new company in exchange for its assets.

The Kipawa shares will be exchanged as soon as possible for new Riordon shares on the basis of 1½ shares of Riordon common for each share of Kipawa common.

The Ticonderoga Company will not change, but the new Riordon Company will become the controlling shareholders owning over 60 per cent. of Ticonderoga's stock.

The new Riordon company will also own all the capital stock of the Gatineau Company, recently organized to take over the water powers, timber limits and mill properties of the Edwards and Gilmour-Hughson companies.

The proceeds of the sale of the securities of the new Riordon company will be used to purchase the various properties involved, supply funds to increase the capacity of the plants, and for the further expansion of the properties purchased.

Checking Freight on Private Sidings

The Transportation Department of the Canadian Manufacturers' Association, Toronto, recently sent out the following with respect to checking freight on private sidings:

Effective January 1st, 1917, railways in Eastern Canada discontinued their former practice of checking freight on private sidings. Prior to this action, several conferences were held between members interested and representatives of the railways, as a result of which, it was arragned that under certain conditions clean bills of lading would be given by the railways for cars loaded on private sidings; also that shippers would use their own seals, which were satisfactory to the railways, or would be furnished by the railway with seals consecutively numbered. These seals were to be applied by shippers to all side and end doors of cars, as soon as loading was completed, and a record kept thereof for comparison with seal record at destination.

Numerous complaints have been made by our members of claims being declined by the railways for shortages at destination from cars loaded on private sidings, the railways showing that cars arrived at destination with original seals intact. Commissioner Boyce of the Board of Railway Commissioners for Canada, issued a judgment on February 27th, 1920, in complaint of T. H. Taylor Company, Chatham, sustaining the railways in the stand taken by them. At least some of our members have had instances where goods loaded by them on private sidings checked short of destination, although the railway records showed that car arrived with original seal intact, and after the claim for shortage had been declined by the railway, circumstances had arisen which proved beyond a doubt that goods had been removed from the car without apparently breaking the seals.

It is felt that the understanding arrived at by the railways when our circular 121 was issued, should be revised, and in order to strengthen our case, I will be glad to receive full particulars of any instances you may have had where shortages could be proven as having occurred after goods were loaded in car, although seal record was apparently perfect. Particulars of such instances should include date and point of shipment, nature of goods, destination, and if possible car number, together with any further particulars which would be of assistance.

Lumber Companies All Busy in Gaspe

Everywhere on the north and south shore of the Lower St. Lawrence, which is least known, yet one of the most interesting sections of northern Canada, come reports of remarkable development planned for this season and the future. At Ste, Anne des Monts the lumber company operating there reports one of the most successful seasons and an English company is rumored to be again planning operations. Both companies will employ in the neighborhood of 600 men.

At Magdalen River the ring of sturdy axes will reverberate after being practically silent for over forty years. At that time the Ross Lumber Company worked the timber limits in that locality. These limits were particularly good and large quantities of pine were obtained.

The story of the close of the Ross mills is a dramatic one and shows labor troubles were known even forty years ago. At that time the shores were even more sparsely settled than now and the "lumber jacks" very often took the matter of controlling civilization in their own hands. According to information a dispute arose between the officials and men which resulted in a miniature rebellion. The enraged and husky lumber jacks after wrecking the company's stores chased the officials out of their own limits.

At the time of their operation along the Magdalen River the Ross Lumber Company possessed a fleet of about twenty-two full-rigged ships. These sturdy vesse's carried the lumber to many foreign ports particularly to South American countries. For years the company carried on operations on a large scale, but finally about forty years ago, as noted above, they closed down their mills, which many years later were destroyed by fire.

Now an English company known as the Great Eastern Pulp and Paper Company own this rich limit and are preparing to spend millions of dollars on their plant and equipment. It is understood railway connections with Gaspe Basin are planned and that one million dollars is to be expended on the highway between Magdalen River and St. Anne des Monts. With such development of forest and mines it is evident the province of Quebec is entering on an era of development from which it will emerge as one of the Dominion's richest provinces.

Of course in the Lower St. Lawrence there are no perplexing labor problems, but all craft are eagerly sought after and wages are on a very much higher basis than has even been demanded before. For ordinary labor workmen are receiving as high as $4 and $5 per day. Building operations are unusually brisk in spite of the high cost of materials. Among the bigger contracts is that for a large stone church at Ste. Anne des Monts which has been contracted for at $160,000.

Hammering in Home Building Idea

An aggressive Southern retail lumberman believes in creating a desire to own your home and recently published a striking advertisement under the catchy caption of "It's time you owned the key to your own front door." There was an attractive illustration of a home and a big key in the background of the picture. Here are some of the convincing and strongly worded arguments in his announcement:—

"Money paid out in rent is money gone. Money paid on a home is money saved—and earning interest every day in comfort, contentment and pride of possession.

"We have been these eight years or more endeavoring through our advertising to instill the home ownership spirit into the minds of the man and woman who has the rental burden around their necks, and there are a great many renters who would own their own home to-day had they taken our advice years ago. It is true that many did take our advice, but to those who did not, we have only this to say: We shall continue to talk home ownership to you, and we are not going to be satisfied until we have a 100 per cent. home ownership in this city.

"Think of the future. Think of rearing those kiddies in a little home that is all your own, situated in a garden spot, and unfrequented by landlords.

"Do not pay any attention to the rumors you hear to the effect that building materials are going down. It is our honest and candid opinion that there will be no material change in the price of lumber for the next five years.

"We have a service department with a man in charge who will gladly give you advice and assistance in your home building plans.

What a Good Fellow Really is

These are worthy purposes and, in any analysis, are of great importance.

No organization can exist unless the dues which maintain it are paid promptly. Why not pay them cheerfully? It will not do at all to let part of the membership pay and the rest do nothing. It is not fair: it's rotten. The amount of the dues is trivial as compared with the advantages provided; such dues should be paid without reluctance or procrastination.

The good fellow who is really a good fellow meets such obligations gladly because he feels not only that he is receiving value in full but also that it is unfair and subversive of good fellowship not to pay along with the rest of the gang.

If there is honor among thieves, how much more should there be the highest reciprocal relation between the members of organizations composed of gentlemen—and a gentleman is not a gentleman unless he is really a good fellow.

If, therefore, you belong to any organization, pay your dues and prove that the hand clasp of your membership is sincere.

The Concatenated Order of Hoo-Hoo, St. Louis, Mo., thus observes wisely and well:—

Beauty that is only skin deep finds its parallel in the good fellowship that is only superficial.

The "good fellows" we hail from day to day, the chaps who share our cars, lunches and cigars, may after all beat their wives or starve their children.

Real good fellowship is Sincerity of Heart, Integrity of Mind, Appreciation of the Rights of Others, and Loyalty to Organization.

Many men are corking good fellows up to the point where they are called on to do their part in support of the organizations in which they hold membership. The reasons for maintaining an organization are usually just as valid as the years pass as were the reasons for joining in the first place.

The purposes of organization are to foster good fellowship, to promote mutual understanding of ideas and aims, to insure the general prosperity of those represented, and in some instances, to provide definite benefits to members' dependents.

Public Opening Model Lumber Yard

How it is Laid Out and Possesses Certain Features which Others May Well Consider

The new Long-Bell yard at Independence, Kas., declared to be one of the most modern retail plants in Southwestern Kansas, was formally opened to the public on June 5. This yard is one of the oldest of the Long-Bell yards, but, lacking certain modern features, it was entirely rebuilt and covers a quarter of a block in the heart of the Independence business district.

Located only half a block from the main business street of the city, it was necessary to enclose the entire yard with a brick wall to lessen fire danger. While thorough attention was given to providing modern facilities within the yard, the attractiveness of the exterior and the entrance was by no means overlooked. The parking on the front and east side has been sown to Bermuda grass. The driveways are built of concrete. The west alley is entirely covered over, while the east alley is open. The building itself is a substantial, imposing structure ranking with the best business buildings in Independence.

It contains a light, spacious general office, with the manager's private office adjoining. A hall leads from the general office to the display room, which is very home-like in appearance, with curtained windows, a large centre table and comfortable chairs. On the walls are photographs of homes built in Independence with material purchased from the Long-Bell Lumber Company, and also homes taken from different plan books. During the opening fifteen or twenty of the photographs of local homes attracted a great deal of attention. This room is used to show plans and talk over details of building with customers. It will also afford a place of meeting for contractors with prospective buyers.

The cement room is ideally located, so that cement may be loaded under the roof area in the west alley or in the public alley. The sand, chat, gravel, shingles and posts are in an open space at the back of the yard. The yard is lighted throughout with high power electric lights.

The formal opening was from 2 to 6 p. m., and in order to properly advertise it, picture slides were run in all moving picture shows in Independence for a week in advance. Advertisements were inserted in all the newspapers, and several reading notices were used.

The crowd began coming promptly at 2 o'clock. The north end of the west alley had been closed and the door served to hold the screen for the moving pictures. The picture shown was "The Story of a Stick," the Long-Bell film produced by the Rothacker Film Manufacturing Company showing the process of manufacture from the woods to the finished product. This picture was shown to nearly 1000 of those who attended the opening and was very popular.

Perhaps the one thing that attracted the most attention was the display room. Everyone was very much interested in this feature, and especially in the homes of people shown on the walls. Several beautiful boquets in the main office, private office and display room added to the attractiveness of the interior.

Souvenirs in the form of balloons, wooden whistles, rulers and fly swatters were given to the children, the last three souvenirs containing Long-Bell advertisements.

As the visitors entered the main office they were shown into the private office, where those who desired registered. During the afternoon a large number registered. Those who registered were entitled to a chance in drawing for prizes. Five prizes were offered, and it is interesting to note that four of these prizes were won by women. In fact, a large number of the visitors were women and this was gratifying to the company as they wish to make the yard as attractive to women as is any other store. The prizes were: A nice bungalow type door; a medicine cabinet with bevel plate mirror; 1000 shingles; one screen door (galvanized wire); one gallon of paint. An orchestra played throughout the afternoon. The C. R. Cook Paint Company, the Johns-Manville Roofing Company and the Beaver Board Company had representatives who explained the use and value of their products to the guests.

New Electric Chain Saw

There have come to light, particularly within the last few years, a number of tree felling and bucking devices. With the exception of the well known drag saw application, all of these have extinguished themselves in the natural course of events.

The device pictured here is new, and unquestionably merits consideration if for no other reason than that it has been developed by Charles Wolf, an engineer, now of the Peninsula Iron Works, Portland, Oregon, who has already acquired success in "chain saw" applications. Those who are familiar with the chain deck saw "rig" introduced some years ago, and now to be found replacing the more cumbrous circular swing deck saws in a number of mills, particularly in the Northwest, will recognize the same genius there as appears in this new portable machine, says F. F. M. Engineering Department in "Lumber."

Embodying all of the elements of the man powered crosslcut saw, the wear resisting and rapid repair features of the roller chain, as well as being oil lubricated from a large oil space formed by the sheet sides of the saw blade, the machine represents very careful design and a thorough consideration of the inherent difficulties and disadvantages of chain saw applications.

The particular points of the saw assembly are best illustrated and described by the accompanying outline sketch. The driving motor pictured is a one and one-half horse-power at 3,600 r.p.m., A-C, 3 phase, ball bearing motor, gear connected through grease lubricated dustproof enclosed gears so as to travel the cutting teeth at a rate of 1,050 lineal feet per minute. The saw teeth may be run in either direction by means of a simple motor reversing switch. The whole

Illustrating application of chain saw with travelling teeth

"rig" weighs 84 pounds and, therefore, comes properly within the meaning of the term "portable."

For service in the woods several of these machines might be wired into a skid-mounted movable generator station—presumably a gasoline or kerosene engine driven generator, although possibly a small steam turbine set might be used at one of the log yarding or loading donkey boilers.

It is interesting to note, in this connection, that the electrical machine would decrease the usable power from a gasoline or kerosene movable station by two efficiency figures; (1) the efficiency of the generator which the engine drives, and (2) the efficiency of the motor receiving its power from the generator. Assuming the generator, which might be driven by the gas engine in the woods, to be capable of generating at 85 per cent. efficiency and the motor to run at the saw to operate at 80 per cent. efficiency, it would mean that of the 100 per cent. available at the engine but 68 per cent. would reach the saw, neglecting any transmission losses between the engine and generator and between the generator and the motor. The direct connected gas engine "rig," on the other hand, carries to the saw the full output of the engine. To offset this fuel consumption, where gasoline is used, are points of continuous cutting (eliminating the idle return stroke which practically all drag saws have) and speed and facility in handling. These qualities, if found to appeal in the woods, camp and mill as they unquestionably do to him who may see it and not have to use it, will create for this machine a very enviable place among actual users. There are naturally a number of obstacles in the field of practice which the device must surmount on its own merits before success will be assured.

Within the limited confines of our own mind we do not see this machine eliminating the muscle and brawn-driven cross-cut saw.The device, however, most certainly represents a step forward and if usable as a one-man rig gives promise of being a "stem winder." Its performance in the presence of the writer (who is "from Missouri") demonstrated a remarkable capacity in going through the 27-inch fir log pictured. The time fifty seconds.—F. F. M. Engineering Dept.

Last Heard of Underwood Measure

The Underwood resolution providing for negotiations with the Canadian Government or the Provincial Governments of Quebec, Ontario and New Brunswick, relative to the embargo on the shipment of wood pulp to the United States, failed to receive the President's approval at Washington.

The Passing of Matthew Deans

Matthew Deans, president of M. & M. A. Deans, Limited, manufacturers of waggon hubs and lumber, Sprucedale, Ont., passed away on June 4th in his 85th year. The late Mr. Deans was one of Ontario's pioneer lumbermen, having started his first mill sixty-three years ago at Dublin, Ont. After operating for a number of years at Norwich and also at Waverley, he removed to Sprucedale some thirty-five years ago. Mr. Deans was of Scotch descent being born near Glasgow, and, coming to Canada at an early age, was reared on a farm near Paris. He was predeceased by his first wife in 1914, and, having married again, is survived by his widow, two daughters and two sons, the latter being M. A. Deans of Orillia and James D. Deans of Sprucedale. The remains of Mr. Deans, who was a member of the Masonic Order, a Liberal in politics and a staunch Presbyterian in religion, were taken to the family plot in Paris cemetery for interment.

Death of Mr. J. F. Whitson

Mr. J. F. Whitson, of Toronto, Commissioner of the Northern Development Branch of the Ontario Department of Lands and Forests, passed away suddenly at Sudbury on June 12. Although he had been ailing for some time, his death was not expected. He was formerly Assistant Director of Surveys, and on the organization of the Northern Development Branch was made Commissioner. He had been in the civil service about thirty years. The late Mr. Whitson had recently completed a tour of the northern part of the province, where he was widely known.

One and Two-Storey Sawmills

Referring to the question as to the respective merits of a one-storey building, or two storeys or more, for a general sawmill business, the usual plan is to have two-storey buildings for this purpose, yet some splendid planing mills have been equipped all on the ground floor says an exchange. It is largely a matter of personal preference and of ground cost and available room. Someone reduced the matter to figures a few years ago, and these figures show that stock can be moved 50 ft. along the ground as readily as 1 ft. upward. This gives a very good working basis for figuring out the relation of the work involved in moving stock from place to place during the process of manufacture. The governing factor, however, will probably be the magnitude of the business. If the volume is comparatively small, the one-storey plant will be found better, provided, of course, there is plenty of room to spread out. If the business is to be of considerable magnitude, a two-storey plant will prove more satisfactory.

Edwards Co. Continue as Wholesalers

The control of W. C. Edwards & Co. at the time of the merger, (an extended reference to which was made in the last edition of the "Canada Lumberman") was vested in Gordon C. Edwards, W. W. Humphreys, John A. Cameron, E. R. Bremner, Norman F. Wilson and C. M. Edwards. These gentlemen, known as W. C. Edwards & Co., Limited, will continue to do business as wholesalers and they have now on hand large stocks of dry white pine, Norway spruce and hemlock. In the recent sale, the sawmills of the W. C. Edwards Co. at Rockland, Ont., as well as the other plants and limits, were included in the negotiation.

No Reason to Cut Lumber Prices

There is no justification at the present time to warrant any decided reduction in the price of lumber, according to Sir Douglas Cameron, former lieut.-governor of Manitoba, and president of the Rat Portage Lumber Co., Ltd., who arrived in Vancouver following a month's visit to New York.

"There is absolutely no reason for cutting prices," stated Sir Douglas. "The demand is there but the lumbermen here are cutting off the demand by reducing prices. Once you cut prices you begin to scare people. The market in the east for eastern lumber is firm, and I can't account for the attitude of the lumbermen here. There is absolutely no reason for them to get panicky."

Admitting that the prices demanded by the loggers were out of proportion, Sir Douglas stated that his company was getting around the difficulty by putting in their own logging plants. The Rat Portage company, he said, was planning an active season's work, and did not anticipate a slump in the market.

What Lumber Salesmen Can Do

"What can the traveling lumber salesman do for the retailer whom he calls on?" is a question that has been bobbing up this year at most of the retail lumber conventions. Many things. But the biggest he can do for his retail customer, is to keep him supplied with the ideas and experiences of a practical business character, of other men.

The good that a lumberman gets from a lumber convention, is the opportunity of absorbing the ideas, thoughts, and experiences of other men in the same line of business, in order that he may apply them to his business. The lumber salesman who knows the lumber game, and has a practical "nose for news," can make himself a traveling convention for the benefit of his trade, the year round.

Get the thought, Mr. Salesman, that even the slowest and most reactionary lumber dealer, has something in his business affairs that could be used by the trade generally. Every man knows something that his fellows could profit by knowing. Catch those thoughts. Note those experiences. And pass the word along to Smith, and Jones, and Brown, that Black grabbed a bundle of good business in his town, thus and so.

And if the retailer gets in the habit of looking for you, Mr. Salesman, on account of the good business thoughts that you bring with you, you will be helping yourself indeed.

Mr. Playfair Heads New Company

James Playfair, the well-known lumberman and shipbuilder of Midland, has been elected president of the St. John Dry Dock & Shipbuilding Co., St. John, N. B. D. S. Pratt, of Midland, has been appointed vice-president and managing director, and on the Board of Directors is D. L. White, Jr., Midland; W. J. Sheppard, of the Georgian Bay Lumber Co., Waubaushene, and others. It is announced that the company has purchased a hydraulic dredge of Canadian register to work at St. John.

And Now There is Luxury Building

"Luxury building" in London, Eng., has new been extended to "any building contemplated or in the course of construction which may cause a shortage of labor or material for the provision of dwelling accommodation." The London City Council has served notices on a number of firms ordering work to cease on their premises in respect to rebuilding or alterations. Among the firms receiving such notice are some of the largest department stores.

The Chairman of the Building Control Committee of the London County Council is quoted in Daily Commerce Reports of the Bureau of Foreign and Domestic Commerce as saying that serious thought will be given before a ban is placed on the continuation of work, in which highly skilled labor that would be of little use in the construction of dwelling houses is employed and if a building would be a source of enormous local revenue or result in increased employment or would help increase export trade, its construction would doubtless be permitted.

And Again Please, Mr. Dealer

We reminded you in this same space last issue, not to let your trade get the erroneous and unfair impression that building costs were extravagant simply because "lumber" was so high, which impression easily gains ground, but to see that lumber got a square deal. The lumber and millwork in a frame house only costs about one-third of the entire cost of the house, says the "Gulf Coast Lumberman."

And here is another timely thought that every lumber merchant worthy of the name should keep before the minds of his trade in times like these, when everyone knows that the lumber market has broken. It isn't going to do the public any world of good in their building operations for lumber to come down, if labor keeps going up, and if fixtures for lighting, plumbing, etc., do not lose some of their altitude. Knowing that the lumber market has broken, many of your townspeople are going to jump at the thought that construction costs should break sadly. The public should get the benefit of the lumber price reduction, and is absolutely entitled to it. Any dealer who does not grant it ought to be hung up by the thumbs, because in that case he will be playing the part that he has been accusing the mill man of for the past year.

But he must educate his trade to understand that it takes more than a dip in lumber prices to bring building down, and the best the dealer can do is make him a reduction in that portion of his building costs which amounts, at the most, to one-third of the cost of the building. So long as it continues to cost what it now does for labor and fixtures, there can be no decided break in building costs.

Tell your trade so.

News and Views in the Pulpwood Arena

Would Develop Canada's Pulpwood Field

G. R. Hall Caine, former British Deputy Paper Controller, who has just returned to London, Eng., from a tour of investigation of Canada and America in the interests of British newspapers, is of the opinion that there is a fruitful field for British capital in the development of Canadian pulpwood resources to meet the world's shortage of newsprint. Hall Caine deprecates attempts, which he found on his return were being made to find a substitute for wood pulp. He points out that there is no shortage of timber for paper making, since Quebec alone has 500,000,000 cords of pulp wood despite the ravages of fire. He refers to the increasing consumption of newsprint by the United States, which he thinks will make the European situation increasingly difficult for six years, since not only will the United States absorb all the newsprint Canada can produce but will force herself into the European markets both for newsprint and wood pulp and become a stern competitor of British mills.

"Canada offers a splendid opportunity," says Hall Caine. "She has not only timber but the huge waterpower necessary for cheap production. I am convinced there is a fruitful field for British capital in this direction and I am assured any such enterprise will have the whole-hearted support of the Dominion Government authorities. British newspaper owners must realize, as the Americans have, that it is essential they control their raw material supplies."

Pulpwood is Difficult to Get Out

The pulpwood peeling season has started in Northern Ontario. Little active peeling has been done up to the middle of June as the settlers, who do most of the work, had not then finished the spring operations on their farms. Labor is scarce and men would not face the heat and flies. The latter are the worst at the peeling season.

Mr. E. Newton White, of Charlton, Temiskaming district, reports that there is very little poplar wood taken out in and around Charlton, and the price quoted for the peeled variety is $10.50, summer delivery. Rough spruce and balsam, mixed, are bringing from $8.00 to $10.00, and peeled from $16.00 to $18.00. Spruce and balsam, which have been fire-killed, are commanding $11.50 for summer delivery. The price paid for pulpwood in the long (12 ft. to 16 ft.) on the creek and river banks this spring was from $6 to $7, according to driving distance. By reason of the early thaw, considerable quantities of wood were left in the bush, although quite a lot was taken out in the bare ground by slooping, skidding, etc., which is a rather expensive method. Owing to the sudden spring breaking-up, most of the flood water got away before the ice went out or rose in the creeks, and there had been little rain since up to two weeks ago. Driving has, therefore, proved unsatisfactory and costly and much of the timber is stranded for the season unless more moisture falls in the near future.

Favor Witholding Pulpwood Grants

At a meeting of the Canadian Daily Newspaper Association held recently in Ottawa with respect to the reported application of the interests headed by E. W. Backus of the Fort Frances Pulp and Paper Co., Fort Frances, for further pulpwood and water power concessions from the Ontario government the following resolution was carried—That in view of the attitude of the Backus interests towards domestic newsprint requirements the public interest demands that the recent application of those interests to the Ontario government for additional pulpwood and waterpower concessions should not be granted, and that all pulpwood concessions previously granted to those interests in respect of which they may be in default, should be cancelled forthwith.

The publishers claim that the Backus interests through the Keewatin Lumber Company, Limited, secured the Lake of the Woods pulp mill, consisting of 1,860 square miles, on condition that they would erect a pulp mill within three years, spending $100,000 in the first year, $200,000 the second year, and $200,000 in the third year. Although this agreement was dated August 19, 1914, and the pulp mill should therefore, have been completed by August 19, 1917, the publishers claim the erection of the mill have not yet been commenced.

The Backus interests now claim that they have been held up by delays of the international waterways commission in reaching a decision, following certain investigations. The publishers state that decision was reached over two years ago and that the Ontario government in the fall of 1918 began to press for the fulfillment of the agreement. That pressure has not yet resulted in the Backus organization commencing the building operations required by the agreement and the publishers ask that under these circumstances and in

THE PULPWOOD SITUATION

view of the attitude of the Backus interests towards domestic newsprint requirements, the pulpwood concessions covered by the broken agreement, be cancelled forthwith.

Men Blew the Whistle and Quit

Employees of the Nashwaak Pulp and Paper Company at the company's rafting grounds at the mouth of the Nashwaak River, across the St. John River from Fredericton, blew the whistle at five o'clock one day recently and quit work. They had completed a nine-hour day and took this method of serving notice on the management of their intention to strike to enforce their demands for a nine-hour day at the same rate of pay that they have been receiving for ten hours. It was said that between 50 and 60 men who had been employed in rafting were concerned in the strike. The St. John River Log Driving Company's rafting operations are not affected by the strike.

Fraser Companies Get Second Pulp Plant

The plant and properties of the Dominion Pulp Co. at Chatham, N. B., have been taken over by the Fraser Companies, Limited, of Edmundston. It is understood that the consideration is between $1,000,000 and $1,250,000, this sum being handed over by the Frasers to the British interests who have owned and operated the Dominion Pulp Company's business for some years.

The Dominion mill is situated on the Miramichi River opposite Chatham, and is known as an easy bleaching sulphite mill. It has a capacity of 50 tons daily and the manager is Walter G. Steevens, who, it is understood, will continue in that position. It is the intention of the Fraser Companies to increase the output of the mill and as soon as the necessary additional plant can be arranged it is expected the capacity will be brought up to not less than 65 tons daily.

The timber limits being transferred are largely areas under license from the Department of Lands and Mines, consisting of about 288 square miles of Crown timber lands, but it is believed the source of supply for raw material which the Frasers are depending largely upon for their new plant is the Miramichi portion of the 1,580,000 acres of timber limits they are acquiring from the New Brunswick Railway Company and upon which the Frasers now hold an option.

The Dominion mill will be the second pulp plant operated by

the Fraser Companies, their other mill being at Edmundston, where the bleached sulphite plant is being increased from a capacity of 110 to 180 tons daily. They also operate ten band saw lumber mills, most of which have shingle mills in connection.

Have Passed Hundred Million Mark

Dominion trade returns for the fiscal year ending March 31st give the total value of the pulp and paper exports for the year as $104,636,901. This is the first time they have reached the hundred million mark. In 1919 they were valued at $82,568,771, and in 1918, $63,344,143. They were made up as follows:

Paper and mfgs. of	$ 3,253,419
Chemical pulp	33,000,063
Mechanical pulp	8,383,419
Total	$104,636,901

The year's paper exports included 14,272,515 cwts., (approximately 713,625 tons) of newsprint, valued at $53,203,792, constituting more than 50 per cent. of the total.

Unmanufactured pulpwood exported during the year amounted to 838,732 cords, valued at $8,454,803, compared with 1,597,042 cords, valued at $15,386,600 in 1919, and 1,002,127 cords valued at $8,339,278 in 1918.

Pulp and paper exports for March, the final month of the year, were valued at $11,668,796, a gain of $3,668,236 over the corresponding month of 1919, as follows:

March	1919	1820
Paper and mfgs. of	$5,732,122	$7,231,207
Chemical pulp	2,041,884	3,875,281
Mechanical pulp	226,554	562,308
Totals	$8,000,560	$11,668,796

Exports of newsprint for the month were 1,426,149 cwts. (71,307 tons) valued at $6,186,305.

Unmanufactured pulpwood exported during the month amounteed to 47,904 cords valued at $497,984, a drop of over 100,000 cords in quantity and of $910,159 in value, compared with the corresponding month of 1919.

Quebec Pulpwood Restrictions Will Stay

So far at any rate as the Province of Quebec is concerned, the restrictions on the export of pulp wood from Crown lands is to remain. The agitation of interested parties in the United States is a failure. Sir Lomer Gouin, the Premier of Quebec, in addressing a meeting at Montreal on June 21st, was most emphatic in his declaration of the maintenance of the policy to conserve Canadian resources for our own people. He pointed out that the province had forty million acres of pulp wood leased and still retains seventy-five million acres.

"It is to these riches of the province that our good neighbors, the Americans, throw their envious eyes," he added. "They have used up their riches and look to our lands and see what we have and the intelligent way we use them, and the intelligent way we conserve them, and so these good people want to force us by using the big stick to give them our property. Since 1910 we have prohibited the exportation of pulpwood, and we have had results, and without trying to provoke our powerful neighbor in any way, let me tell them, as I have said before, we understand that charity begins at home. What we have practised for ten years we propose to practise in the future."

Expansion of the Riordon Interests

In a recent statement Carl Riordon, of Montreal, said: "The Riordon business was founded in 1857. Riordons have manufactured sulphite fibre since the sulphite process was first introduced, and have gained an experience and created an organization which produces the highest quality of easy-bleaching and bleached sulphite fibre. The Riordon Company and the subsidiaries will be producing early next year over 150,000 tons per annum of pulp and paper products, together with over 125,000,000 feet of lumber, with annual sales in excess of $30,000,000. It is the definite policy of the company—having in view its tremendous resources of raw material and water powers—to increase production, as conditions warrant, to 500,000 tons of pulp and paper products per year, representing an annual sales turnover in excess of $75,000,000.

Mr. Riordon also referred to the low production costs of the company and says that he is satisfied that the company's earnings, even in the most depressed market, will amount to many times the interest and preferred dividend charges, and, in due course, will permit the payment of substantial dividends on the company's common share capital.

Figures in reference to the individual mills show a present production of 128,000 tons, and the addition to the Kipawa Mill, which will be in operation in March, 1921, will increase this by 25,000 tons, making a total production of pulp and paper of 153,000 tons a day, of which 18,000 tons is book paper manufactured by the Ticonderoga mill.

Mention is made that the company's physical assets, including timber limits, townsites, water powers, etc., will, when present development and construction work is completed, be worth at least $50,000,000. Deducting the funded debt of the company and its subsidiaries, amounting to $12,401,000, there would be available for the company's first preferred shares a surplus value of physical assets in excess of $37,00,000. The net liquid assets of the company, or the working capital, after the present financing is completed, will amount to about $5,000,00.

Great Activity at Three Rivers

Many pulp and paper companies are in active development in the Three Rivers district. The St. Maurice Paper Co. is in process of doubling its capacity at Three Rivers. The International Paper Co. are constructing a sulphite mill which is nearly completed, and work will soon start on a 200-ton paper mill. The Wayagamack Pulp & Paper Co. are busy with extensions and will shortly add several machines to their equipment. The Belgo-Canadian Pulp & Paper Co. are enlarging their plant and in no place in the province is there such industrial growth as in the Three Rivers district.

Huge Increases in Timber Sales

Supplementing the brief comparison of timber sales in British Columbia for the months of May in the last three years, the Hon. T. D. Pattullo, Minister of Lands, has issued a statement giving the detailed figures for the first five months of the three years referred to. They are as follows:

For 1918—Feet board measure, 467,825,300; lineal feet, 181,830; ties, 114,410; cords, 8,738. Revenue, $137,963.44.

For 1919—Feet board measure, 77,922,000; lineal feet, 1,181,160; ties, 441,172; cords, 17,054. Revenue, $190,246.40.

For 1920—feet board measure, 23 ,078,815; lineal feet, 1,503,855; ties, 5,757,664; cords, 40,087. Revenue, $1,053,524.87.

The Glory of Work

Work! Thank God for the might of it, the ardor, the urge, the delight of it—
Work that springs from the heart's desire, setting the soul and the brain on fire.
Oh, what is so good as the heat of it, and what is so glad as the beat of it,
And what is so kind as the stern command challenging brain and heart and hand?

Work! Thank God for the pride of it, for the beautiful, conquering tide of it,
Sweeping the life in its furious flood, thrilling the arteries, cleansing the blood,
Mastering stupor and dull despair, moving the dreamer to do and dare.
Oh, what is so good as the urge of it, and what is so glad as the surge of it,
And what is so strong as the summons deep, rousing the torpid soul from sleep?

Work! Thank God for the swing of it, for the clamoring, hammering ring of it.
Passion of labor daily hurled on the mighty anvils of the world:
Oh, what is so fierce as the flame of it, and what is so huge as the aim of it
Thundering on through dearth and doubt, calling the plan of the Maker out?

Work, the Titan, the friend, shaping the earth to a glorious end;
Draining the swamps and blasting the hills doing whatever the spirit wills,
Rending the continent apart, to answer the dream of the Master heart.
Thank God for a world where none can shirk, thank God for the splendor of work.

—Angela Morgan in Chicago Labor News.

Nothing Can Really Take the Place of Wood

How Canadian Forests Must be Preserved and Not Plundered—Getting the Maximum Production and Insuring Industrial Future of Dominion

By C. B. Davis, Iroquois Falls, Ont.*

A forest is not a mine to be exploited or cut into until exhausted and then abandoned, but it is, rather, a growing crop which must be cut in such a way as to insure sustained and maximum production per unit of area. The cutting must be so directed as to result in the removal from time to time of a certain volume of wood per unit of area without impairing or exhausting the base crop. Looking at it from a financial viewpoint, a forest is the principal which yields a certain periodical interest and it is this interest only, in the form of wood, which must be cut, leaving the principal intact.

Forestry is the application of those principles and methods calculated to bring about sustained yield in the case of a forest. By "sustained yield" I mean managing the forest in such a way that a constant supply of wood commensurate with the periodical consumption will be insured. There are a number of causes which have in the past developed, and still developing, which make the practice of forestry an absolute necessity. These causes may be enumerated as follows:

1. The Necessity of Wood.
2. Depletion of Natural Timber Resources.
3. The Accumulation of Waste Areas.
4. Surface Erosion and Run-Off.
5. The Destruction of Forests By Fire.

The necessity of wood is obvious. There is no other material which could be satisfactorily substituted in the case of construction jobs; there is nothing that could be so satisfactorily used in the erection of coffer dams; there is nothing that contains the degree of elasticity and semi-rigidity which makes wood indispensible for use in mines. It is true that there are substitutes in the case of furniture, but I should think that no great comfort could be derived from sitting in an iron chair or sleeping in a concrete bed.

The second real cause for the practice of forestry in the depletion of natural timber resource. The general concensus of opinion on this continent is that there is an unlimited, inexhaustible timber resource. This is a fallacy. The present supply of wood is being cut into rapidly. Consumption exceeds natural production. In the United States 85 per cent. more timber is consumed than is produced. Obviously the end of natural timber resource in the States is in sight. In this country it is the belief that Ontario contains vast areas of pulpwood and that there is no end to this supply. This is not true. Fires, insects, disease, windfall are rampant in those areas not inhabitated or even partially controlled by man. Statistics from reports of explorations made in this north country of ours show that a great portion of the area north of the Transcontinental is swamp land and non-producing and that, periodically every twenty to forty years, fires sweep through, destroying huge quantities of timber and leaving nothing but exposed barren soil.

In the past those areas which have been burned over and those areas on which the timber has been destroyed by insect and disease and those areas which have been slashed by the old-time logger have in many cases been rendered barren. These areas will total thousands of square miles and the fact that they are barren and non-producting means that they are a dead loss and a burden to the government. These areas may not be capable of producing farm crops but they will, in most cases, produce timber. Since there is no tree growth remaining on these barren areas the only means of reclaimation and regeneration is reforestation by artificial means.

Deforestation Means Eventually Drought

With reference to the fourth cause, which is surface erosion and run-off, special attention is given the case of water sheds. Deforestation or absolute removal of the forest from a given watershed invariably means sudden floods, followed ultimately by drought. The presence of a forest on a given water shed tends to retain moisture by stimulation of ground cover growth which holds the water falling upon it long enough to permit of the seepage of that water into the soil. This water, then, which seeps into the soil, is fed gradually and constantly to the streams draining the area. If the forest is not there, there is no seepage, comparatively, and the water falling upon the area, not being held, runs immediately to the stream, causing variations in water levels which are by no means enduring or constant. The effect of this condition on a specific water power is apparent.

It is almost impossible to realize the great damage done each year by fires running over unprotected timber holdings. Annually, millions of acres are burned over transforming lands, which have been at work century after century producing forests which have maintained and renewed themselves without care or costs, into non-productive wastes, blackened stumps and bleaching snags. This is forest devastation, and it must be overcome if the timber resource of Canada is to be conserved. Oftentimes it does not require more than two fires over a given area to render that area barren and non-productive forever.

Just what can forestry do to alleviate to a certain extent the effects of those causes just enumerated? What can forestry do to conserve natural timber resources? In the first place, it can protect them from fire to a certain extent, through the installation of such control measures as are deemed necessary for any specific area. In the second place, the practice of forestry can reduce, to a certain extent, the havoc wrought in forests by insects and fungi. To deal in detail with the method of combating insect and fungus is impossible at this time since it would involve a lengthy discussion of those branches of forestry known as Forest Pathology and Forest Entomology. Suffice to say that the insects and diseases are combated by the introduction of parasites, which will act against the insects and diseases present, and the confining and isolating of diseased and insect-infested areas. This isolation is brought about by direction and regulation of cut. Forestry, or rather the principles of forestry, can conserve natural timber resources by eliminating, insofar as possible, "mine-lumbering," so called, and this may be accomplished by the installation of certain cutting systems best suited to local conditions; by the practical supervision of logging operations with a view to obtaining closer or more complete utilization and protection of young growth, and by confining definitely the logging operations to a given area which contains a known volume of wood.

Regulation and Direction of Cutting

What can forestry do to protect stream flow? Regulation and direction of cuttings to be made on watersheds with a view to retaining at least a part of the forest will prevent, to a certain extent, that condition of flood age and acute variation in water levels which invariably results when all growth is removed. In the event that the watershed is already barren of tree growth, there is only one recourse, and that is, artificial planting. Subsequent care and management of the regenerated watershed will, in time, have its direct effect on regulating stream flow and insuring constant water levels.

With respect to the fourth point, which is the accumulation of waste areas, there is, of course, only one course possible and that is reforestation, using that species of tree which will grow most rapidly under specific conditions and insure a beneficial and lasting result.

I have given what might be considered major causes which make the practice of forestry necessary and have endeavored to point out just how forestry can limit these causes to a certain degree. Now the question arises where and how has the application of the principles of forestry been proved "good business?" Has forestry operated economically and have results secured been commensurate with money and labor expended? These questions are easily answered. Two hundred years ago Germany and France were faced with a veritable wood famine. Their forests wrere practically on the verge of exhaustion; their consumption was at least 50 per cent. greater than production and wood was the main source of fuel. It became very apparent that, unless something was done to conserve and build up these exhausted forests, Europe would lose one of its most valuable natural resources and would become directly dependant upon importation to meet the demand. The necessity of doing something to remedy the situation became manifest. The practice of forestry was taken up and applied on an intensive scale. Today their forests are managed scientifically and are producing the major part of the wood needed. At certain periodic intervals the forests are cut over and this cutting is so regulated that the material cut from the forest is only that portion produced by the forest during the period between cuts. In other words, the two countries are reaping a harvest annually or periodically from their forests without reducing or impairing the "principal" or base crop and thus a sustained yield is in-

*An address delivered in Vocational Educational Classes.

sured. Canada and the United States are even now approaching that condition which Europe felt a century ago. The United States is using at this time annually twice as much as her forests produce annually and it is estimated that within fifty years the present shortage of timber in the United States will become a true famine, unless some remedial measures are put into effect immediately. The States fully appreciate this condition and are rapidly organizing forestry commissions to study the problem with a view to determining exactly what can be done to bring about a solution.

Just now pulpwood has become so scarce in the United States that a great number of the mills there are very largely dependant upon Canadian forests for their supply, and these, in their turn, will tend toward becoming exhausted due to the increased demand being made upon them.

What High Costs of Production Do

I should like to read to you some extracts from the April issue of the Canada Lumberman and Woodworker. The article appeared under the title: "How Long Will Pulp Supply Hang Out."

A cord of pulpwood sold at the mill at $2 and newsprint paper was plentiful and cheap some fifteen years ago. But that was when men could be hired to work in the woods at $30 a month, and glad of the chance, while pork was $15 a barrel and beans $2 a bushel, with everything else in proportion. Also, there were more trees waiting to be cut down and fewer magazines and newspapers and public documents to be printed.

Today the cord of peeled pulpwood is worth $21 at the mill because the loggers get $65 to $85 a month and live like fighting cocks regardless of the high cost of food, while everybody who touches a hand to the forest product, from the first stroke of the axe into the tree until the log comes out of the machine in the form of white paper, gets sky-high wages, and that, with an abnormal and constantly increasing demand, explains why newsprint costs four or five times as much today as it did in the dawn of the century.

The Canadian bureau of statistics estimates that there were standing in the eastern provinces of the Dominion in 1917 about 395,000,000,000 feet of soft woods, upon which there is an annual drain of 5,220,000,000 feet for lumber and 984,828,500 feet for pulp. At this rate of consumption the softwood forests of Eastern Canada and that part of the United States lying east of he Mississippi River would be exhausted in 49 years. As the rate of consumption is steadily increasing, the famine is likely to come sooner than 1969.

Even at the fabulous price of $21 a cord, the pulp mills are not able to get all the wood they need to meet demands for their product, for labor is scarce as well as costly. The popular impression that Canada is an inexhaustible source of timber supply is very much at variance with the facts.

Since 1917, when the stand of softwood in eastern Canada was estimated at 395,000,000,000 feet, fully one-third of the trees have been destroyed by the spruce bud form, and the supply today is not more than 225,000,000,000 feet, upon which there is an annual drain by cutting of aboout 6,200,000,000 feet. In the year 1918 there were imported into the United States from Canada 1,370,027 cords of pulpwood, but since then the volume of imports has declined, owing to the various restrictions imposed by the Canadian Government upon export."

Terrible Toll of Forest Fires

Let us consider for a moment the forests of Canada. There are in Canada 1,900,000 square miles of forested country but the greater percentage of this enormous area has been burned over and the timber thereon destroyed in the past 75 years. In addition to the burned area, there is a great portion of the area which is under non-merchantable timber. To express the area which is non-producing in terms of square miles: There are at this time 1,000,000 square miles in Canada which were once under producing forests and which are now either barren or under second growth material too small to log. The vast amount of timber which has been destroyed in the past 76 years was all on Crown Land. The Government collects a minimum tax of 50c. on each thousand board feet cut from her forests. This means that the public treasury has lost through forest devastation $1,000,000,000 in potential royalties alone. This loss in revenue to the Government has its direct effect, of course, on taxes levied. Thus indirectly the Canadian people feel the effect of forest devastation. In other words, every acre of accessible timber burned on Crown Lands makes it harder for you to live. Canada's wood consumption cannot be curtailed, but the drain on her natural timber resources due to consumption and export can be balanced to a certain extent by protective measures and the handling of forests with a view toward obtaining maximum utilization and the forests can be built up by sufficient reforestation calculated to ultimately yield, together with the virgin forest, an equal amount of wood annually to that consumed annually.

Heretofore I have generalized more or less and now I wish to confine myself, insofar as it is poossible, to a discussion of forest in its direct application to the paper and pulp industries. In the first place, I should like to point out just what the organization and installation of a paper and pulp mill means in dollars and cents. To build a mill capable of producing, say 220 tons of paper a day, requires an approximate available capital of $15,000,000. In addition to this outlay of capital, there is a certain amount necessary to the construction and maintenance of the town. And a town is almost invariably necessary where paper mills are built in remote regions. The mill which represents this huge outlay of capital must be considered a permanent, more or less non-versatile, investment. Its initial location is final. It is so built and contains such specialized machinery and general equipment that it is not possible without great expense to manufacture anything but paper. The mill and the town and all the accessories thereto are solely dependant upon the timber limit which furnishes the mill with raw material.

An Efficient System of Fire Control

Obviously, it behooves the paper and pulp industries to protect their limits from fire. There is so much at stake that these protective measures must be complete and unfailing. This is one of the first jobs of the forester of any specific paper and pulp company. He must organize a fire control system adequate enough to cope with the conditions found in his limit. He must make sure in his organization that the personnel involved is of a dependable character. He must make sure that every portion of the forest on the limit is covered by an efficient system of control in the form of observation stations and patrol routes. He must make sure that at all times transportation facilities are available in order that in case of fire men may be gotten through to the fire with the least possible delay.

To accomplish this and to accomplish the many other things necessary to the successful management of a timber limit the forester must first gather the following information:—

1. How big is the limit and what is its general character with respect to drainage and topography?
2. How much timber and kind of timber exists on the limit?
3. Where is this timber and how much of any given species is located on a definite area?
4. What is the character of the soil and the growing conditions of the timber?
5. What per cent. of the total area comprising the limit is non-producing?
6. What are the methods of cutting or logging practiced on the limit?
7. What are the possibilities of adding to the present limits?

All of this information is gained through valuation surveys which cover the limit by a system of strips run at certain intervals apart in that direction calculated to give the most average result. Also through exploration in virgin territories.

Having secured this information it is possible to arrive at certain definite figures and conclusions, namely:—

1. Just how long the existing wood supply will last, in other words, how many years the mill can operate on the basis of present and possible future annual consumption.
2. To what extent it is possible to bring about closer or even complete utilization.
3. The gross area to be reforested or planted in order that enough wood will be available to enable the mill to continue operations after the present virgin supply is exhausted.
4. If it is impossible to grow trees large enough for pulpwood by the time the present supply is exhausted, how much the limit must be added to in order to insure a supply of timber during that interval before the planted forest becomes merchantable.
5. The species of trees to plant and just where the planting can be made to the best advantage.
6. The exact number and the kind of trees to grow in the nursery, which must necessarily be built in order to permit of economic planting.
7. The number of years necessary for planted forest crop to mature.
8. The designation of the exact area upon which a logging operation will locate and the exact number of cords to be taken from the area.
9. The extent to which supervision is necessary to insure economic cutting, complete utilization, and the leaving of the forest in the best producing condition.
10. That system of cutting which will facilitate natural reproduction, eliminate windfall to a material extent, and make possible the production of the greatest quantity of wood.
11. A feasible and economic method of slash, which is composed of tops, branches, and other waste material, constitute a real fire hazard on a forest under exploitation and its removal means much to more efficient fire protection.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted

Two Hundred Thousand Feet 4/4 Birch, No. 2 Common and Better. Box 303 Canada Lumberman. 26-29

MacLean REPORTS

Review of Current Trade Conditions

Ontario and the East

Market conditions on the whole are inclined to be rather quiet, although a fair amount of stock is moving, especially in white pine. Hardwoods are in more active requisition than softwoods and prices are holding firm. The demand for maple has declined somewhat but buyers have been down the eastern provinces and through various parts of Ontario picking up a number of stocks that are now being sawn. The chief topic of conversation is the slump in western prices, especially on common boards, shiplap and dimensions in cedar, hemlock and fir. V joint, rough clears, flooring, ceiling, base, etc., are holding better than the cheaper lines. Western fir is now able to compete successfully with eastern hemlock but a new danger seems to have cropped up in the competition from southern pine on which there is practically no quotation. If the importers of southern pine were able to secure cars with which to bring in the product, the state of affairs might prove serious, but the car situation across the border appears to be getting worse rather than better. Lath have dropped slightly in price but are holding their own fairly well and as each week passes, there is disclosed the fact that not as great a production as was expected is being offered.

Eastern values are holding firm and while there is a general discussion regarding the price reduction in other commodities, some talk is heard of a rise in prices in the lumber line a little later on, and even the Board of Commerce, which is now practically defunct, gave a sort of expiring gasp the other day by remarking that a marked general reduction in lumber appeared to be warranted. It is one thing to draw conclusions and another thing to understand and get face to face with manufacturing and operating conditions. Costs of production are climbing all the time and it was not until recently, in Ontario mills at least, that help has been available in any desired quantities.

The labor situation is much improved but, owing to lack of rain this spring, driving costs up north were very high and a few mills have only started up recently owing to inability to get logs. Labor, however, is still very independent and the wage tendency is upward rather than downward. The cost of sugar, potatoes and other supplies keeps climbing.

In regard to values, a leading wholesaler asserted this week that prices may be marking time just at present owing to the falling off in demand from the United States occasioned by the Presidential election excitement and the car situation, but he believed when this flutter was over, values would re-assert themselves and he would not be surprised to see lumber going still higher. There was not nearly enough stock in the country to supply the normal and foreign demand, and building on the whole was proceeding on a very satisfactory scale.

Shingles continue to be disposed of at any old price and buyers are very cautious. A large number of plants in the west have closed down as they cannot afford to pay the prices asked for cedar logs, the high cost of labor and sell the product at the low rate which has been prevailing of late.

There is no denying the fact that the dropping of prices on western stuff has had a somewhat disquieting effect on the eastern situation and has shut off purchasing on the part of several large retailers. Some customers, who have been in the market almost continually, are trying to tell travellers that they are going to hold off for a while yet, believing that they will get the benefit of still lower prices.

One satisfactory feature of the whole trend of trade is the promising crop prospects in the West and the encouraging outlook in Ontario. Recent rains have put the farmers in a good mood, and repairs, which have been held back, are now being proceeded with. White pine, spruce and hemlock so far are holding firm particularly the former, and retail yards report a good steady trade. Crating, box and culls are in active requisition.

A leading firm, who specialize in hardwoods, report that stocks are now much more representative and complete than a few months ago, and are being offered in larger quantities than they were last spring. Whereas the wholesalers were going out after the millmen some time ago, the millmen are now coming to the wholesalers, inviting offers for their cuts for the past season and also asking what they are prepared to pay for birch, maple, elm and basswood for next fall and winter delivery.

Great Britain

The softwood importers have been passing through a difficult period during April and May, and in consequence have evinced no inclination to enter into fresh contracts. The house-building campaign has not yet got under way and until activity in this line is in full foce, it is not under way and until activity in this line is present conditions. It is said that softwood markets and prices are a sore puzzle to practically all importers and merchants, and, according to advices received from the Old Land, enough causes have militated against the market during recent weeks to upset prices, but again all calculations have gone astray and so far there has been no real break in values.

In regard to Scandinavia and Finland and how the shippers view the situation, a recent issue of the Timber News says:—The Swedes just laugh to scorn the idea of lower prices. If any weakness should appear, they argue, it will only be local, and due to stupidity or lack of foresight. The Swedish exporters themselves have sold nearly 75 per cent. of their 1920 production, and they tell us that they are being pressed to enter into large contracts for 1921 delivery with 7 in., unsorted red on the basis of £35 per standard.

Norway does not carry much in the way of stocks of sawn wood, but for what supplies are available the shippers demand extraordinarily high prices, owing to the fact that woodpulp and paper factories are strong competitors for the unsold stocks.

Finland we know to be fairly well stocked, but there is not the slightest indication of weakening quotations. From £35 to £38 f.o.b. would seem to be the basis for 9 in. deals and £30 to £33 per standard for 7 in. battens.

Respecting freight outlooks, the situation has not changed very much and one cannot say how long it will take matters to get to a reasonable level. In the timber trade itself lies the power to force better terms out of the shipowner. It cannot be done by employing people of kindred spirit; only those firms who are engaged in the matter of rates and the handling of fixtures. The regular charterers in the timber trade are quite capable of fixing rater for their own particular trade without the help of outsiders. Let it be understood that we are now approaching a time when boats will be more numerous and when Great Britain will be doing more chartering for wood cargoes than probably any other country in the world. Surely then the timber trade is now in a position to dictate its own terms and to see they are carried out says an exchange.

An interesting announcement is that the Guild of Builders (London) Ltd. has been formed and among other things which this organization will undertake will be to carry out work for every type of building, whether public or private. It will build for agreed prices, or for prime cost plus a fee. But in every contract the price or the fee must include the percentage necessary to secure during its run, to all engaged thereon, the continuous Guild pay described in the last paragraph. Beyond this, there will be a small percentage for the purchase of plant, for overhead charges, and, if necessary, for the hire of capital, at fixed rates without powers of control. The Guild will give no financial guarantee for the performance of its contracts. It pledges itself to carry out the work that it undertakes, and it supports this with a roll of volunteers pledged to do the work.

Relating to importations, a recent despatch from Liverpool sums up the situation as follows.—As regards spruce, recent importations have been difficult to move to realize shippers' f.o.b. values and freight charges, etc. The transferred Government stocks and other holdings have been offered at lower figures, which has created the difficulty; although the general demand being very inactive is probably the chief deterrent. The condition and specification of the freshly imported wood are points greatly in its favor compared with the old stock. However, a lull in fresh shipments is almost sure to ensue, as shippers are quite acquainted with the position on this side. Yellow pine is in improved demand, and values are very firm. Quebec birch planks and boards are arriving regularly. Merchantable quality is quoted round £60, but a rather slow demand is reported. This should improve considerably when the general inactivity passes. Halifax and St. John birch plank stocks are sufficient for present needs. Values are difficult to appraise, but are in

the neighborhood of £35 c.i.f. There is a shortage of 2½ in. planks, and naturally a demand for this size with disaction on shippers' part; an improvement in the position of this wood is certain.

United States

Owing to the Presidential election excitement, the tie-up in transportation, labor strikes and other causes, the general tone of the lumber market in most centres is quiet. As one authority has it, the lumber industry "falters" and this possibly sums up the situation comprehensively. Southern pine is being sacrificed in price and one hears of all sorts of offers. A great deal is reported regarding the car situation and one writer, in referring to this phase of the question, says:—In my personal opinion, we have the worst car shortage to-day that we have ever known since I have been watching the lumber industry, and on top of the absolute famine of cars—not in any particular location, but north, east, south and west—we have a most critical and severe embargo situation that is adding to the extreme seriousness of lumber transportation. I have never seen the time before when the car situation was one-half as bad as it is to-day.

Now, I am not an expert on transportation matters, and I don't pretend to be able to diagnose the car situation, so I simply accept the opinions of men who are in position and who should know, and they tell me that the car shortage hasn't decently started yet, as far as lumber is concerned, but that conditions will become more and more tense as the crops begin to mature and move to market, because the railroads are going to move the nation's food, even though everything else stands still. I asked a wise man to-day, who is in position to know about the railroad situation.—"When will the mills have more cars?" and he replied,—"There ain't no such animal; they've lost the pattern."

At a number of points lumber prices have been dropping for some time and even those stocks in the strongest position are commencing to feel the influence of low levels in other woods. Competition makes the lumber market, and no kind of lumber can maintain a high position for very long in the presence of low prices for other woods that can be used as well. It may be somewhat unsafe to make predictions, but it hardly seems possible that lumber prices, as represented by southern and western lumber quotations, can go to a lower level. An increase in the demand, which, it would seem, cannot be much longer delayed, would strengthen the market all around, though it is not probable that it will again go to the heights reached last winter.

Weather conditions in the south have been improving and if they continue to do so, so that the woods may have a good drying out, a normal state in the hardwood industry may become possible. The mills are now becoming more active and the supply from this out should be more certain. Many plants are getting more log supplies and the output is approaching normal. On the whole, there is a general betterment in productive conditions. The chief difficulty is transportation. Prices are easier on some items, but on others are firm. The present dullness of the market would not discourage increased production of hardwoods, if such should become possible, for the reason that stocks of all kinds are far below normal, and actually unsuited to the requirements of the market. Most of the stuff now moving is green, practically direct from the saw, whereas the great need is for dry hardwoods. An early increase in business activity is looked for by more lumbermen, and they feel that by the time fresh stocks have seasoned there will be a heavy demand that will keep stocks moving freely.

If crop success means as much this year as it usually does, the outlook for trade is most encouraging. Of course, it is yet too early to make definite predictions of yield, but all grain shows improvement and if nothing intervenes to stop progress the total crop will be much larger than was anticipated. It had been thought that the shortage of farm labor would prevent the seeding of as large acreage as usual, and this is true in many localities, but, as a general thing, crops look good now, and there is enough land under cultivation to insure a plentiful supply of food, if the yields come through undamaged.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Good Demand at Halifax with Stocks Low

Halifax yards report an exceptionally brisk demand for building material during the past month. A great deal of house building is going on in the city, and still the demand for living accommodations is in excess of supply. The indications are that the present activity will be maintained up until the end of the season. A great deal of money is being spent by the city on local improvement, which is reflected in business in general, and a spirit of optimism prevails.

Owing to local conditions prices of random lumber are a shade lower here than in most other Canadian cities, and dealers who are carrying stocks, purchased at current prices will have no reason to regret their action. On the whole stocks in Halifax yards are below the average.

Reports from the American side of the line would seem to indicate that prices there were in process of readjustment. This, however, is not taken too seriously by shippers here, who are more or less accustomed to the sharp fluctuations that take place among our neighbors to the south. No doubt, however, the weakness of this market is more apparent than real, and is due to the unwillingness of American firms to enter the quiet season during midsummer with more stocks contracted for than they can conveniently carry, particularly in view of the rapid changes that may develop in a period of two or three months.

A number of schooner cargoes, consisting principally of 2 in. spruce and spruce boards have gone forward from Halifax and outports to New York and Sound ports during the past few weeks, and rail shipments are being made as fast as the limited supply of suitable cars will permit. Fortunately most of the embargoes have been raised by the American railroads, but shippers are still badly handicapped by the shortage of American cars. The situation has been relieved to a certain extent by a modification of the restrictions applying to Canadian cars for use in this capacity.

It may be mentioned here that the Canadian Railway authorities are reported to have issued a recent order that all empties are to be sent to Sydney to be used in the coal trade. At the present time the car shortage is being acutely felt, and if this report is true it will certainly work a great hardship on lumber shippers. The prosperity of the province is closely associated with the lumber business and in view of the enormous revenue the railroads receive from the industry, it is entitled to only the most favorable treatment in the matter of transporation.

During most of the month of May the Halifax waterfront has been almost bare of shipping. This was in very striking contrast to conditions for the same period last year, when almost every available berth was taken throughout the entire season by sailers loading deals for the British market. Since the beginning of June, however, conditions have changed considerably for the better, and by the middle of the month shipping was well up to normal. It is not expected that shipments will be maintained at this level for any considerable period.

The British market is still in an unsettled condition. It is gratifying to note the remarkable rise in the rate of sterling exchange, but with the rise of the rate of exchange, there has been a falling off in the c.i.f. prices At the present time, consumption of spruce and pine at Liverpool and Manchester is well in excess of imports. Owing to accumulations earlier in the year and the unsettled state of labor and the difficulties of finance, there is little demand for new shipments of Nova Scotia goods. Exporters here are, however, optimistic, and look for a greatly improved market later in the year when excess stocks have been worked off.

Prices Firm and Trade Fair at Ottawa

Very little change as compared with the first part of the month occurred in the Ottawa lumber market during the closing period of June. Prices remained firm. The demand was about the same as in late May, coming principally from the United States, and conditions with the woodworking plants and factories as to the outlook and operation of the sawmills for a full season were not the best.

Somehow or other the month of June did not seem to get away to a good start, and the lumber trade in general felt it, and the "drag" appeared good to stay until the month of July breezed in. Early in the month there was the likelihood of a strike of the members of the Inside Woodworkers and Factory Workers' unions, which later materialized and closed up fourteen plants. Next came the talk of the Board of Commerce going to inquire into the price of lumber, and

finally, about June 22nd, reports from the drive end of operations indicated that large drives were stalled on account of low water.

Taken on the whole month, trade generally was slower than in May, but the end of the third week and the beginning of the fourth, showed some improvement over the preceding weeks. The principal demand continued to come from the United States, and was for the better grades, indicating that, though the prices for these are already at high levels, buyers do not expect a drop, for the present, at least. The outlook toward the domestic demand brightened a little and was almost wholly for culls and the poorer grades.

The greatest firmness to the market was gained from the pine grades, which were in principal demand. Some reports indicated that there was a tendency toward a weakening in spruce. However, with a possible shortage of logs occurring at the sawmills, there did not appear to be anything that would cause any disturbance with a trend toward seriously lowering prices.

As was forecasted in the previous report, the strike of the members of the Inside Woodworkers and Factory Workers' Union materialized. About five hundred union employees walked out on June 12th and up to June 22nd had not returned to work. The heads of the plants concerned made no overtures to the men after they had gone out and the general principle seemed to be, to keep the plants closed until the men had returned to work under the old conditions or had modified their demands in regard to increased wages and a closed shop principle for the mills.

Among the larger plants which closed down were: W. C. Edwards and Co., James Davidson's Sons, McAuliffe-Davis, Ottawa Stair Work, George M. Mason and Son, M. C. Neate, part of the Ottawa Car Works, James E. Wilson and others. In some contracting circles reports indicated that if the strike was prolonged it would have a considerable detrimental effect on building, as it would stop necessary supplies of sash and door, flooring, and other building materials. On the other hand, it was heard that the operators of the plants had foreseen such a contingency occurring as early as April, and kept on building up reserve stocks to meet just such a situation. In several circles at Ottawa it was believed that the date of the walkout of the men was ill timed.

The foreign car situation became a little easier, but even though more cars became available, there was still a considerable difference between the number of cars supplied and those required. As a consequence many large shipments on order continued to be held up.

The sawmills outside of a growing scarcity of logs reported a fairly good season up to the present but last week reports began to be received iin Ottawa of several large drives being stranded on the Kipawa, DesMoines and other rivers and streams. Unofficial estimates of the probable number of logs held up varied all the way from the hundreds of thousands into millions. The situation with some mills and companies was regarded as being serious.

Jackson Booth, and P. C. Walker, of Shepard and Morse, two of the companies affected, stated frankly that some of the drives they had been counting on to have logs in their mill pond for this season's sawing were stranded. Mr. Booth thought most of the sawmills were in the same boat as his own. Sawmill operators pointed out that with drives stranded, there would be considerably fewer logs reaching the mill pond, with the likelihood that either one of two things would have to happen. Either shut down, or reduce the time of the sawing season. For the next two or three weeks it was expected there would be enough logs on the way to ensure operations, but beyond that time they did not care to prophesy.

The lack of rain in the north country during the spring months was given as the principal contributing factor for the stranding of the drives. Though not as yet officially stated, it is almost certain that as a consequence of the hold-up of the drives that the sawmill production of the Ottawa and Ottawa Valley mills will be decreased this season.

Stocks of all dry lumber continued to remain scarce, and it was not expected that this season's green cut would reach the market until around July 15th. The manufacturers so far have continued to hold back in making quotations to the wholesalers with the result that some seemingly good orders have had to go begging, or, in other words, were not placed because the purchasers were not told what the price was going to be. The attitude on the part of the manufacturers to all appearance was that they intend to keep on withholding announcing their price until they have pretty well ascertained what their production costs for this year are going to be.

Sawmill labor, while not exactly scarce, was not as plentiful as it had been. Lath and shingles remained scarce, and though there was no change in the market quotations of the latter the trade seemed to think that it would continue to grow more plentiful.

The situation in regard to European export for some reason or another did not open up nearly as much as had been expected it would. There seemed to be an atmosphere of uncertainty as to what was going to be done. Whether the shippers were waiting on the Imperial Lumber Conference to be held in London, or for the exchange rate to right itself, or bottoms or ocean space to become more plentiful and cheaper, continued to remain questions for speculation and doubt. Certain it appeared that this year's export season outside of shipments on government account, is nowhere near what it was previous to 1914.

One of the bright features in connection with the market was the apparently strong tone of real estate and the outlook toward future building in Ottawa. May property transfers involving a consideration of over $3,000 amounted to nearly half a million dollars.

St. John Complains of Car Shortage

Quietness reigns over the shipping end of the lumber trade at St. John as the car situation is in the most serious state it has been for years. Practically no foreign cars are to be had for lumber, in fact all kinds of goods as well as lumber are held at St. John for want of American cars for shipment to United States points. This state of affairs has grown more serious since the closing of the winter port as during the cold weather many foreign cars came loaded to West St. John with goods from U. S. points and were in turn loaded for U. S. with all kinds of commodities including lumber. All the mills at St. John finding the same trouble. They cannot get foreign cars so are forced to pile up their lumber at the present time. This situation does not hold any bright hopes for relief in the near future, and possibly it is one of the best things that can happen as too much lumber going to U. S. points might have a tendency to weaken the market and reduce the price. There is no cause for alarm as to any reduction in prices of lumber. The costs during the past winter were very heavy, added to which there has been a dry spring causing the most expensive driving season ever known on the St. John River. Probably the average driving costs will be over double those of last season and this will therefore make the most expensive logs ever produced around St. John. Unless prices remain firm the profits for 1920 will not be very heavy.

The mills at St. John are running full capacity and turning out altogether about 400 M feet a day, largely sawn into 3 inch deals with about 25 per cent. of two inch. No sales of any consequence have been made to date and probably will not be for some time as slight reductions have been made in prices in the Boston and New York market, the base price at Boston for dimension having receded about $5.00 per M. to $6 00 per M.

This may only be temporary and for financial purposes, as many banks are forcing heavy borrowers to pay back some of the money loaned by them. It is certain that manufacturers cannot turn around and replace for less money the raw material, and the same thing applies in all lines of trade. The warm season always sees a lessening of trade with U. S. but as much building must be done a call must come before long for structural material and prices will again rise. Random is still worth $40 00 on cars St. John with payment in American funds. Stocks of pine of better grades are very scarce and will continue to be so for some time to come. The lath market is weakening and buyers will not today pay $8.00 on cars. St. John for American shipment.

Pulpwood prices are the best ever, about $15.00 per cord being paid on cars. St. John for peeled spruce and fir wood. This is the highest figure ever ruling in this section since the history of the pulpwood trade began.

The box shook trade is also good and prices are very firm. Wages show no lessening and labor is not over plentiful.

Many More Marriages than Homes

An average annually of 1,040,000 marriages in the United States as against 70,000 houses built in 1919, is the interesting contrast made by the manager of the St. Louis Housing Association in a recent address before the American Society of Mechanical Engineers. Only 20,000 houses were built in 1918 and 70,000 in 1919 according to this authority who points out the need in that country of 3 340 000 additional houses. The Association is building houses for workmen at cost and suggests that similar associations be organized in every city to prevent house famine.

Cutting Second Growth Timber

The possibilities of conservation and reforestation are indicated by pine timber now being cut in the Ottawa Valley district. One of the busiest lumbermen in the Valley states that much of the present cut is second growth timber, and some of it is two feet in diameter. Questioned as to the time elapsed since the first cut, he said it was sixty or seventy years ago. This timber has grown without any assistance or planting and gives an idea what can be expected if orderly reforestation is carried out.

How Big Industry Has Made Its Way to Front

Tremendous Development of Pulp and Paper Activities During Last Ten Years—Canadian Woods Suitable for the Manufacture of Pulp

An interesting and edifying address on the "History and Development of the Pulp and Paper Industry" was delivered recently before the Peterborough branch of the Engineering Institute. The remarks of the speaker, Mr. P. Westbye, general manager of the William Hamilton Company, were illustrated by lantern slides and moving pictures. Mr. Westbye holds numerous patents for pulp and paper mill machinery, being an expert in that line of wood. The pictures of barking drum machines and centrifugal screened patented by Mr. Westbye and manufactured by the William Hamilton Company were displayed.

The history of paper making carries us back about 6,000 years (3966 B.C.) to the time of the ancient Egyptians, said Mr. Westbye. The use of a material which required no special fabrication may help to constitute the primitive form of an industry which has now come to rank among the foremost in the world, and the products of which not only represent a great diversity of raw material and finished fabrics, but also call for great engineering skill, the utilization of large capital, and the employment of costly and intricate machinery for their development.

The contrast between the primitive papyrus paper obtained by the expenditure of comparatively little labor, and the highly finished product of today has resulted from a series of laborious processes and probably affords one of the most conspicuous examples of industrial development which the world can show.

Use Displaced

The papyrus was widely employed between India and Egypt as a paper until about 190 B.C., when its use was displaced by parchment. Among the Islands of the Pacific interesting forms of primitive paper may also be found, as illustrated in the Tapa Cloth of the Sandwich Islands, which they use for the manufacture of clothing. The material employed is a very fibrous bark of the paper mulberry. The application of the fibres of wood to manufacture paper is commonly attributed to Reaumer who in 1719 observed wasps constructing their nests of fibres gathered from wood, which they wove into paper. The most familiar paper-making wasp is the common black and white wasp, ordinarily known as the hornet. We find the wasps nest constructed upon the identical principles which underline our modern production, but produced by the most primitive of all paper-makers whose origin antedates that of even ancient Egyptians, and it thus becomes evident that the use of wood pulp in the manufacture of paper is a fact of great antiquity, though but recently discovered and utilized by man.

No reliable record can be established in England as to the first paper making. It is stated that in the personal expenses of Henry VII. of England in 1498 there appears the following entry:

"For reward at the Paper Mill, 16 shillings."

John Tate, it is said, had a paper mill in Hartford, England, in 1498. The beginning of paper making in America dated back to 1690, when a paper mill was erected by Mr. Rittenhouser, in Delaware, Penn.

Continuing, the speaker said: Paper was first made in Canada at St. Andrew's, Quebec, in 1803. Canada's first large paper mill was built in 1865, and produced 1 tons of paper in 24 hours. Today a modern paper mill produces from 250 to 300 tons in 24 hours. Prior to 1800 all paper was made of rags. Since that time wood pulp has formed the basis of all the ordinary grades of paper, including that which is used for printing paper.

Canada is the second largest pulp and paper producing country in the world, and is rapidly overtaking the United States, which holds the first place so far. Canada's pre-eminence as a paper producing country lies in the possession of hundreds of thousands of acres of pulp wood forests and conveniently located water powers. Canada has the largest forest area of any country in the British Empire. It embraces 350,000 square miles of pulpwood timber estimated to yield approximately 1,050,000,000 cords of pulp wood. There are about 95 incorporated companies and other concerns engaged in manufacturing pulp and paper. The combined capital invested is approximately $200,000,000. This is a greater amount of capital than is invested in any other industry in the country, with the exception of Hydro-electric power developments.

The annual output of the Canadian pulp and paper indushtry is about $90,000,000. The industry employs about 26,000 people. Its annual payroll is about $16,000,000.

In 1890 Canada's export of pulp and paper products amounted to about $120,000. In 1910 they were worth $10,000,000. For the fiscal year ending with March, 1918, they raised a total of about $72,000,000. Canada exported paper last year to the value of about $38,000,000; about $26,000,000 worth of pulp, and about $8,500,000 unmanufactured pulp wood. Canada's pulp and paper exports lead all the manufacturing industries, with the exception of explosives, while the bulk of Canada's pulp and paper exports go to the United States; they also send to Great Britain, Japan, Australia, New Zealand, South Africa, India, Cuba, Mexico and South America.

Consumes One-Half

Canada produces for sale 2,600 tons of newsprint paper and 2,500 tons of pulps of all kinds every day. The United States has about 2,550 daily and Sunday newspapers, and 14,000 weeklies with an approximate total circulation of 72,000,000 copies. With one-fifth of the world's population, the United States consumes one-half of the world's production of paper. Canada in proportion to the population is a close rival to the United States as a paper consuming country. The United States newspapers consume 2,000,000 tons of newsprint every year, of which Canada supplies one-fourth. Since 1912 all newspapers have been admitted to the United States free of duty. Canada has 140 daily and 952 weekly newspapers. It takes the product of 20,000 acres of pulp wood forest every year to supply Canadian newspapers with white paper. Some of the largest Canadian and American newspapers consume from 50 to 100 tons of paper daily. The daily consumption of newsprint paper in Canada is approximately 260 tons; in the United States approximately 6,000 tons. Canada's daily output of paper made in a continuous strip 3 feet wide would be long enough to girdle the globe to the equator.

Spruce, balsam, fir, hemlock, jack pine, tamarack, poplar, and basswood as used in the manufacture of pulp. It takes from one to one and a half cords of wood to make a ton of paper. Spruce trees best suited to the production of pulp require from 90 to 140 years to arrive at maturity. The average labor cost of producing a ton of paper has increased about 100 per cent. since 1912.

When one looks back at the beginning of this industry and we see the tremendous development of the skill and study and hard work that has put the pulp and paper industry where it is today one fully appreciates that full of dignity, significance, and truth is the whole conception which finds expression in Tennyson's verse—that we are heirs of the ages, the inheritors of all that has gone before us; and it has been truly said that the past has made us, the results of the past are ourselves said Mr. Westbye in conclusion.

Slides Shown

During the evening the assembly which was the largest which has yet attended the Engineering Institute in Peterborough, Ont., enjoyed the slides showing the process of paper-making, from the time the tree is cut until the finished material is turned out from the mill.

Some reels of films (kindly loaned by the Government) of the process of paper-making were also shown, as were pictures of the barking drum machines and centrifugal screens patented by the speaker himself and manufactured by the Wm. Hamilton Company, Peterborough.

Distribution of Safety Literature

The Ontario Safety League continues to place a large amount of literature in the hands of motorists, school children, industrial workers, and others throughout the province. In the first three months of 1920, the League has distributed an enormous amount of safety material, including 35,000 industrial safety bulletins; 32,400 school safety bulletins; 8,500 special bulletins; 8,500 traffic bulletins; 2,700 electric railway bulletins; 150,000 motorists safety bookmarks; 10,200 health bulletins; 65,000 news letters; 9,000 safety calenders; 12,000 leaflets to the "new man"; 125,000 gummed seals; 3,000 safety cards and posters.

Supplementary letters patent have been issued, increasing the capital stock of the Beaver Abitibi Timber Co., Limited, from $1,000,000 to the sum of $2,000,000, for the creation of 10,000 common shares of $100 each.

Contracts have been let for the erection of fifty houses on Bruce Ave., Windsor, Ont., by the Civic Housing Commission under the Government Housing Plan. The houses will be sold for $4,500, with a first payment of 10 per cent. down.

The Seaman, Kent Co., Limited, manufacturers of hardwood flooring, are erecting a new office and warehouse at 263 Wallace Ave., Toronto, at an expenditure of $50,000. The new building consists of two storeys and basement 75 x 135, and is of brick construction.

Loans under the Federal housing scheme were recently increased from $3,000 to $3,500 for four or five roomed houses and from $3,500 to $4,000 for six and seven roomed houses. This is the maximum loan. The period of repayment is twenty years, with interest at five per cent.

The lumber mill owned by Robert Hare, of Laird Township, Algoma District, was recently destroyed by fire. The origin is said to have been sparks from the sawmill engine. A quantity of lumber was also consumed. The loss is estimated at $4,000 and is partly covered by insurance.

The sawmill of John McChesney, R. R. No. 1, New Liskeard, was recently destroyed by fire. The mill was equipped with a circular saw. Some 18,000 logs on skids and 35,000 ft. of lumber were consumed by the flame. About 300,000 feet which had been drawn by truck some distance away escaped.

The Simcoe County Council has taken definite action in the matter of reforestation and has authorized a committee to purchase 1000 acres of waste land to start on the work. The Ontario Government will provide the trees and see to setting them out but the plots will be entirely the property of Simcoe County.

The Ontario Retail Lumber Dealers' Association, Incorporated, head office at Toronto, Ont., have been granted a provincial charter to co-operate in the interests of the retail lumber trade. John B. Reid, W. C. Irwin, Walter C. Laidlaw, T. H. Hancock and Thomas A. Paterson, all of Toronto, are the incorporators.

Frank H. Bowden & Sons Co. Limited, Toronto, Ont., was recently granted a provincial charter to conduct a business as general lumber dealers. The business formerly known as Frank H. Bowden & Sons Limited will be absorbed by the new firm. Capital $200,000.

J. H. Reid of Jarlsberg, Ont., who has sawmills at Bear Lake and Canoe Lake, states that he will have twice his usual cut this season and expects to realize prices commensurate with the advanced costs of production and operation. The supply of men is plentiful, wages are high and shipping facilities good, but the market at present is a little quiet.

The Eagle Lake Lumber Co., who have been operating a mill at King Lake, near South River, for several weeks past, finished their cut in that section and are now running their mill at Eagle Lake. The company sawed about 100,000 ft. of pine, 200,000 ft. of spruce and hemlock and 250,000 ft. of birch at King Lake, and will turn out about the same quantities at Eagle Lake.

The sawmill of John Aitchison, New Liskeard, narrowly escaped destruction during the recent forest fires which raged in New Ontario. Every precaution was taken in view of the approaching danger and the carriage, saw and other equipment were removed from the mill and taken some distance from the scene. It was fully expected at on etime that the mill would be burned but it happily escaped.

The New Ontario Contracting Co. of Port Arthur say that last season was the first one in which they took out saw logs. They have not done any sawing this year as their mill is under construction. In regard to the labor situation, they state that during the past three weeks they have been able to get any number of men but prior to that there were only a few to be had and they were not skilled in any way.

According to reports of fire ranger Curtin of the McDonald Lumber Co., Peterboro, who recently returned from an inspection of the company's timber interests in Galway Township, the damage done to the logs of the firm was not as serious as at first reported when it was stated that several thousand logs had been destroyed. It now appears that only three hundred were touched by fire and these were only burned at the ends.

Word received from Ottawa states that there will be a substantial decrease in the season's lumber output in the Ottawa Valley occasioned through the scarcity of logs arriving at the mills. There are fears entertained by some sawmill men that the season may be short. It is reported that many large drives, containing hundreds of thousands of logs, have been stranded in the Kipawa and other rivers, which are used to float down the timber from the woods to the mill.

A charter has been granted to the Kaministiqua Pulp & Paper Co., Limited, with headquarters in Toronto and a capital stock of $1,000,000, to construct, operate and maintain mechanical and ground pulp, paper, cardboard and other factors, and generally to carry on the business of making, selling and dealing in these lines. Among the incorporators are Arthur E. Murdock, financial agent, Toronto, and others.

There was an entire absence of rain in northern Ontario for several weeks and some mills found it very difficult to get in a supply of logs. One well-known concern had one-third of its logs held up in the Black River at Ramore on account of low water. However, recent downpours have ma-

terially improved conditions and manufacturing is proceeding with satisfactory results at most centres.

Eastern Canada

C. G. Scott is erecting a new sawmill at Fredericton, N. B.

The sawmill of Price Bros. & Co. at Montmagny, Que., was recently destroyed by fire. The loss is $100,000.

The lath mill owned and operated by Fred T. Hazen on the Ben Lomond road near St. John, N. B., was recently destroyed by fire.

The Laurentide Co., Ltd., Grand Mere, P.Q., have adopted the group plan of insurance for their employees, paying half the cost of the policies.

The sawmill of Price Bros. at Montmagny, Que, was recently destroyed by fire and is a total loss. The mill was valued at $75,000 and employed over one hundred hands.

The Gatineau, Limited, Montreal, Que., was recently incorporated to conduct a general lumber business, manufacturing and dealing in logs, lumber, pulp and other forest products.

Alp. Baril is rebuilding a sawmill and sash and door factory at Shawinigan Falls, Que., at a cost of $15,000. The building will be two storeys high, 100 x 40 and concrete block construction.

A recent fire at Le Francois lumber yards, Quebec, consumed over 700,000 feet of wood, mostly British Columbia fir. The total loss caused by the fire is about $100,000, partly covered by insurance.

The Port Arthur Shipbuilding Corporation, Limited, Montreal, Que., have been incorporated to build and deal in steamships, barges, tugs and other water craft. Capital $100,000. F. H. Markey and W. W. Skinner both of Montreal are two of the incorporators.

The British American Shipbuilding Corporation, Limited, Montreal, Que., was recently incorporated to manufacture, build and deal in steamships, barges and other water craft. Capital $100,000. Two of the incorporators are F. H. Markey and W. W. Skinner, both of Montreal.

The plant of the Kemptville Steam Sawmill Co. Limited, at Kemptville, N. S., was recently destroyed by fire. There was no insurance on the property. The company has a cut of logs equal to at least a million feet of lumber and up to the time of the fire only half the quantity had been milled.

The Greening Lumber Co., Limited, Greening, Que, was recently incorporated to conduct a general lumber business manufacturing and dealing in lumber, timber, pulp and other forest products. Capital $175,000. H. S. Ross of Westmount, and E. R. Angers, of Montreal, are two of the incorporators.

Mrs. James Johnston was awarded $15,000 damages against the News Pulp & Paper Co., St. Raymond, P.Q., owing to the death of her husband, who was killed in the plant in November last. Mrs. Johnston sued or $25,000 and the jury awarded her $15,000, she to get $10,000 and each of her two children $2,500.

It is reported that Sir Lomer Gouin, Prime Minister of Quebec, will shortly resign. At a recent meeting in Montreal he stated that it was not the intention of the Provincial Administration to deviate from the policy of embargo on pulpwood, so far as Crown lands are concerned, despite the attitude of the United States.

The large lumber mill owned and operated by James Robinson at Millerton, N. B., was recently destroyed by fire. Only the brick engine room remains. In addition to the mill several piles of lumber on the wharf were also consumed, but the main lumber yards were saved. The loss is estimated at about $100,000 and more than one hundred men are thrown out of employment.

The Cote sawmill at St. Joachim, in the Quebec City district, was recently destroyed by fire as well as a number of houses. The damage done was in the vicinity of $200,000 and the flames were only got under control after assistance had arrived from neighborhood municipalities. The sawmill was over a century old. It is understood that considerable lumber was also burned.

A new mill is being erected by the River Valley Lumber Co. of Oromocto, N. B. The equipment consists of a Waterous double band saw, a Yates band re-saw and there will be an equipment of Disston saws. A 300 horse power Leonard engine is being placed in position and, it is understood, that the River Valley Lumber Co. will purchase and install machinery for making apple barrels.

Work at the Proulx nursery of the Laurentide Co. has been completed for the current year, with a record of 800,000 trees planted in the woods, and about 1,250,000 trees planted in the transplanted beds. The trees placed in the woods are three and four years, depending upon their size and development while in the seed and transplant beds, and if conditions are favorable for their growth, they will be ready for pulpwood in about twenty-five years.

A new mill has recently been erected by Chas. Boudreau at Victoria Bridge, N. S., and has started operations. It is a water-power mill and gets its power from the North Mountains, being driven by a 250 horse power turbine. A fine dam of concrete and stone, 211 ft. long and 21 ft. high has just been completed, and in case of necessity the dam can be raised to 50 ft. The sawmill is 80 ft. long and 30 ft. wide and will turn out, in addition to the usual lines of lumber, flooring, heading lumber, lath and shingles, besides hardwood manufactures of various kinds.

It is understood that Price Bros. have under consideration a plan for the increase of their capital stock. Since Laurentide and Abitibi were split up, Price Bros. enjoy the distinction of being the highest priced stock on the market to-day. When it touched at $350 a short time ago and since has been turning around at $335, it then reached the highest point of any stock with the exception of Abitibi. The regular quarterly dividend of 2 per cent. has been declared on Price Bros.' stock.

C. Alf. Gingras & Sons, Limited, who were recently granted a provincial charter to operate sawmills, manufacture lumber, timber, etc., with a capital stock of $45,000 and headquarters at Sherbrooke, Que., have recently moved their plant to larger and more commodious quarters. The company have been formed under the name of C. Alf. Gingras & Sons, Limited, to manufacture all kinds of fixtures, such as those for churches, banks, stores and offices. The firm will also supply contractors with all the material they may require. L. E. Gingras is general manager of the organization.

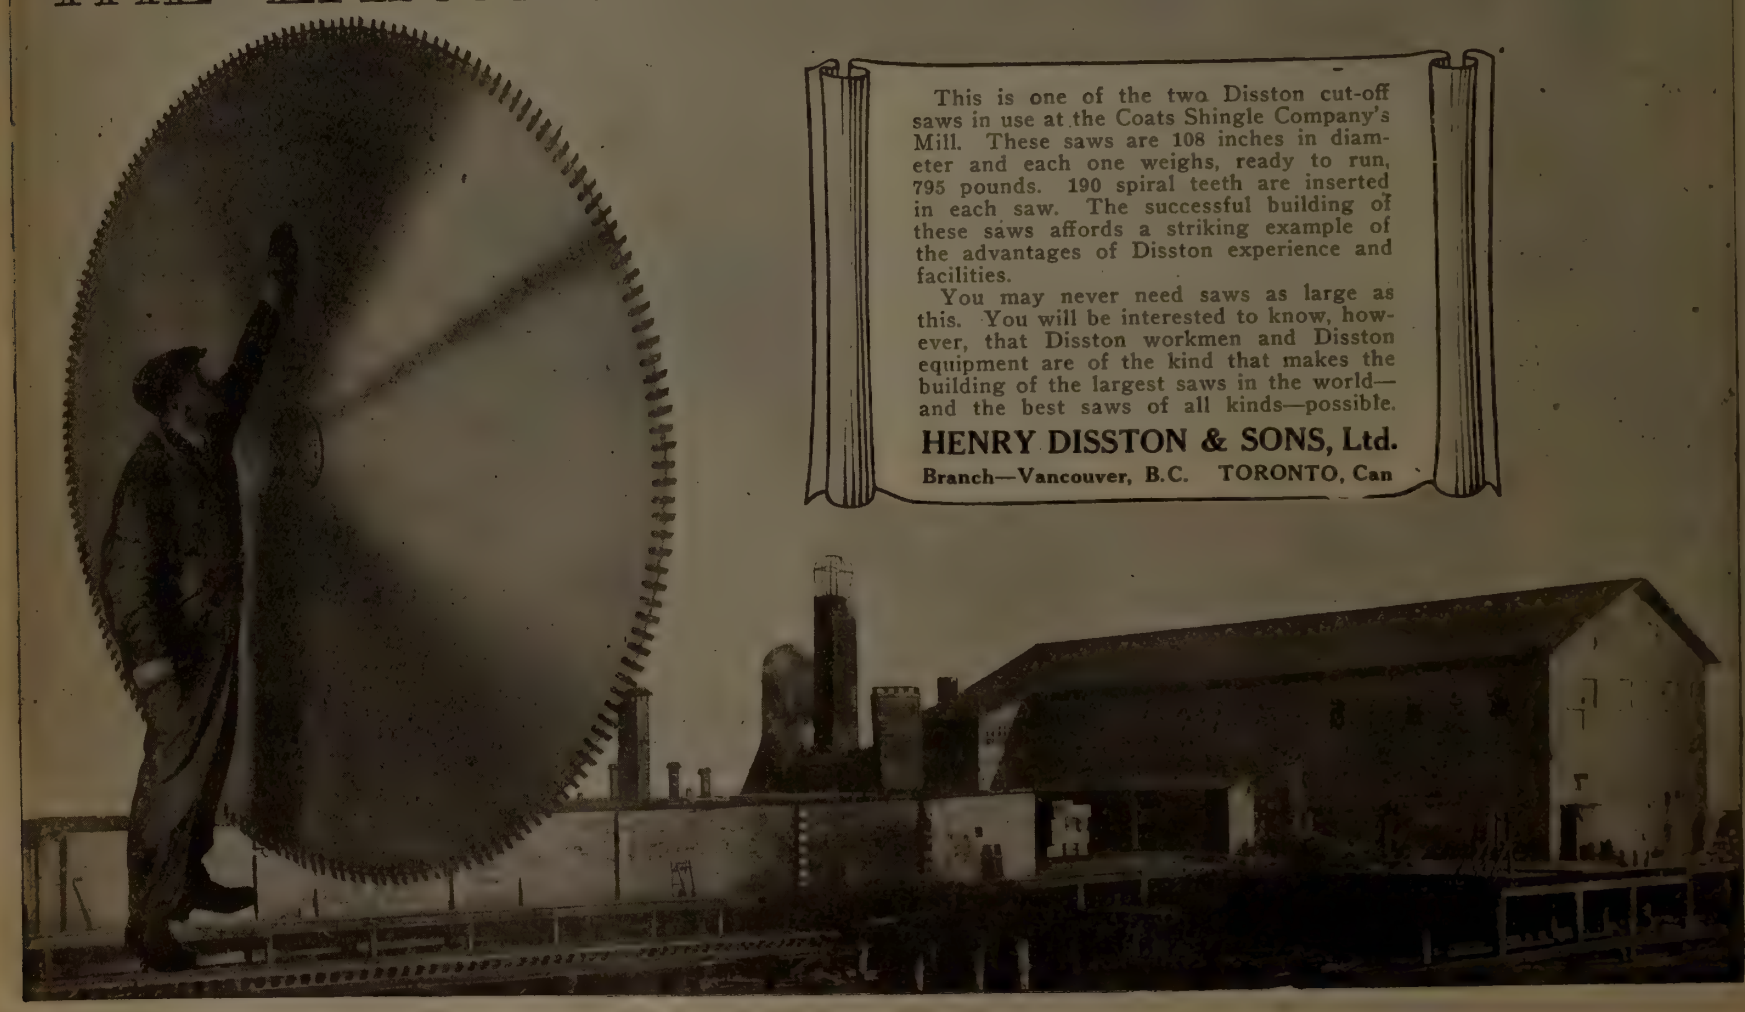
THE LARGEST SAWS IN THE WORLD



This is one of the two Disston cut-off saws in use at the Coats Shingle Company's Mill. These saws are 108 inches in diameter and each one weighs, ready to run, 795 pounds. 190 spiral teeth are inserted in each saw. The successful building of these saws affords a striking example of the advantages of Disston experience and facilities.

You may never need saws as large as this. You will be interested to know, however, that Disston workmen and Disston equipment are of the kind that makes the building of the largest saws in the world—and the best saws of all kinds—possible.

"Plus Service" Transmission

Service, not price, should be the basis on which your purchases of belting are made. The highest-priced belt is built to give maximum service and is the most economical.

Low-priced belting is the most expensive, for it cannot be expected to wear and usually doubles its first cost in expensive repairs, power waste and lost production.

The possibilities of waste in buying and placing belts is so great that no one but a belting expert should ever be permitted to select a belt for even the most unimportant purpose.

It isn't necessary that you maintain a belting expert. We have established a special service department in charge of belting engineers who will, without cost, gladly take the responsibility of making your transmission belting give Plus-Service by keeping its cost at the minimum. They will specify

Dominion Friction Surface Belting

because of its unbroken record of satisfactory performance, but only when it will most efficiently meet your requirements.

Phone or wire our nearest service branch that you may test the value of this service.

HURLBURT

Motor Trucks

Come First

This is the verdict of users who have tried them out by years of constant heavy work; and by comparison with other makes.

The idea behind the build of every Hurlburt Truck is the best that money and brains can produce regardless of cost. That idea has been realized in actual performance.

No lumberman should buy a truck without first knowing the specifications of the Hurlburt.

Write for further particulars.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "Rotex"

When It Comes to Rope—

the best is the cheapest

Too much is dependent upon the rope you use—the safety of your men and horses, the operation of your plant—to take chances on inferior, little known brands. By insisting on Lion Brand Cordage you are assured of a rope, 100% efficient, composed of the best materials only--subjected to exacting tests before leaving the plant.

Let us figure on your requirements.

Here's Another Letter

Vinton, Que., May 25th, 1920.

McLean Machine Works,
Campbell's Bay, Que.

Dear Sirs:—

Having had fifteen years' experience as sawyer and used several makes of feed works, I must say the feed purchased from you is the easiest operated and without any special attention, giving excellent satisfaction in every way.

I would not use any other, and I recommend your feed works to any who are desirous of securing a feed that gives satisfaction.

We are sawing from 18 to 20 thousand feet per day, and are running 6½ inch feed and 15 gig without any trouble whatever.

THE O. A. LETTS LUMBER CO.,
Per O. A. Letts, Sect. Mgr.

Gasoline Power For Loading and Skidding

By actual test the little machine shown in this illustration will handle any log of the sizes commonly found in Ontario and the Eastern Provinces, including Newfoundland.

The Six Horse Power size, as shown, is the size commonly used, but for those who desire a good reserve of power for emergencies we build the Ten Horse Power size.

These machines are made with either ONE Drum, or TWO Drums, to suit the work; and with either BELT DRIVE, as shown, or with GEAR DRIVE.

The price is moderate, the weight of the machine is little, but it does big work.

Write for fuller information.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.
When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

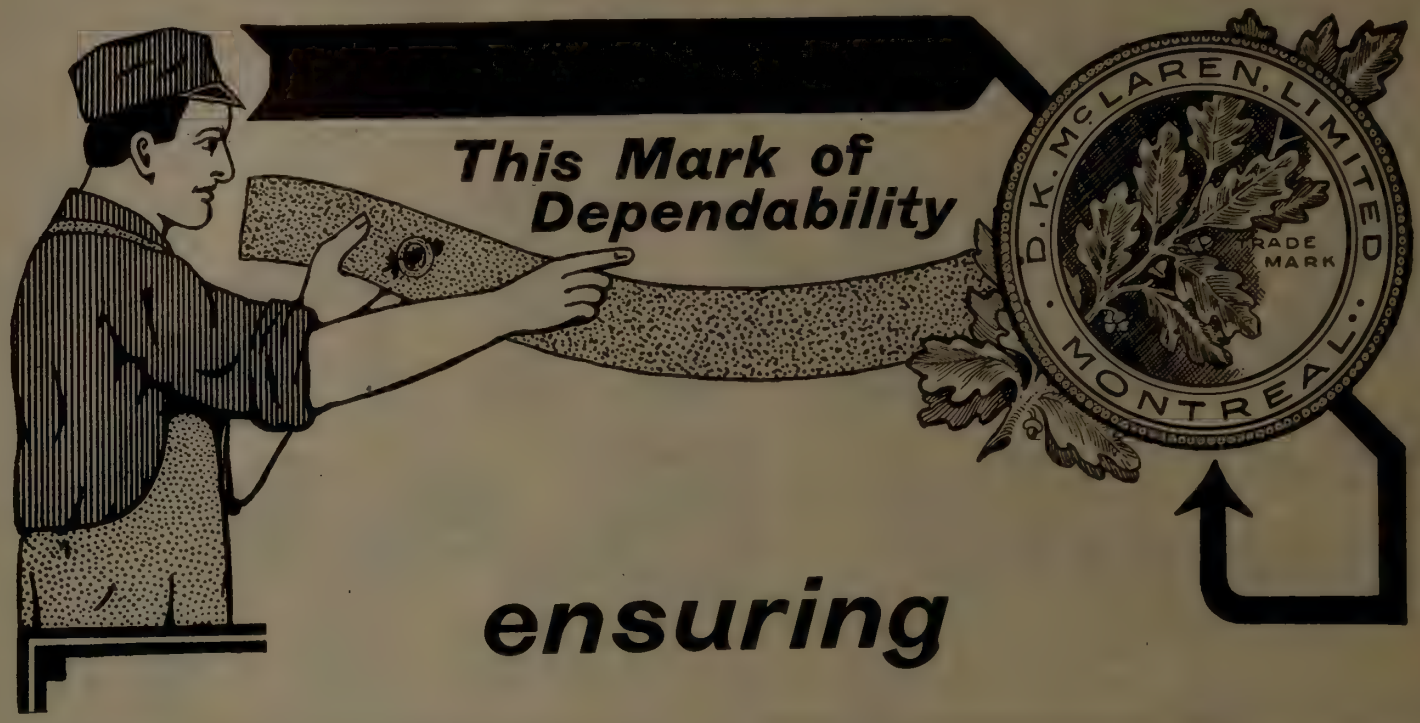
ATKINS ALWAYS AHEAD — TRADE MARK — E.C. ATKINS & CO. HAMILTON, ONT.



ensuring

Constant Service

This mark on your belting is a guarantee of absolute dependability. It represents the product of a manufacturer who is satisfied with only one standard of service-giving quality in every belt that leaves his hands.

D. K. McLaren's genuine oak tanned leather belting has for years been building a reputation which indicates its practical value to the men who use it.

D. K. McLaren's may be found on the heaviest drives and serving under the most exacting conditions where a belt of unvarying service, strength and dependability is essential.

Users are never disappointed.

The result is always the same with D. K. McLaren's. Always look for the trade mark when purchasing.

THEY CUT CLEAN

ALOXITE Saw Gumming Wheels cut clean. They cut free.

This is true, because every little, hard, sharp, tough Aloxite grain gets a real chance to do its work.

The skillfully made Aloxite Grinding Wheels are open or porous enough to give each grain what might be termed a clearance—allowing it a full opportunity to cut.

The bond holds the grain just long enough, breaking down at just the instant the grain is dulled.

Fresh grain, fresh cutting edges are thus brought into play and the wheel always cuts clean—cuts free.

These are just some of the reasons why Aloxite Saw Gumming Wheels will do everything good saw gumming wheels should do—plus.

Carborundum Products are: Carborundum and Aloxite Grains and Powders, Grinding Wheels, Sharpening Stones, Paper and Cloth, Garnet Paper and Cloth and Carborundum Refractories

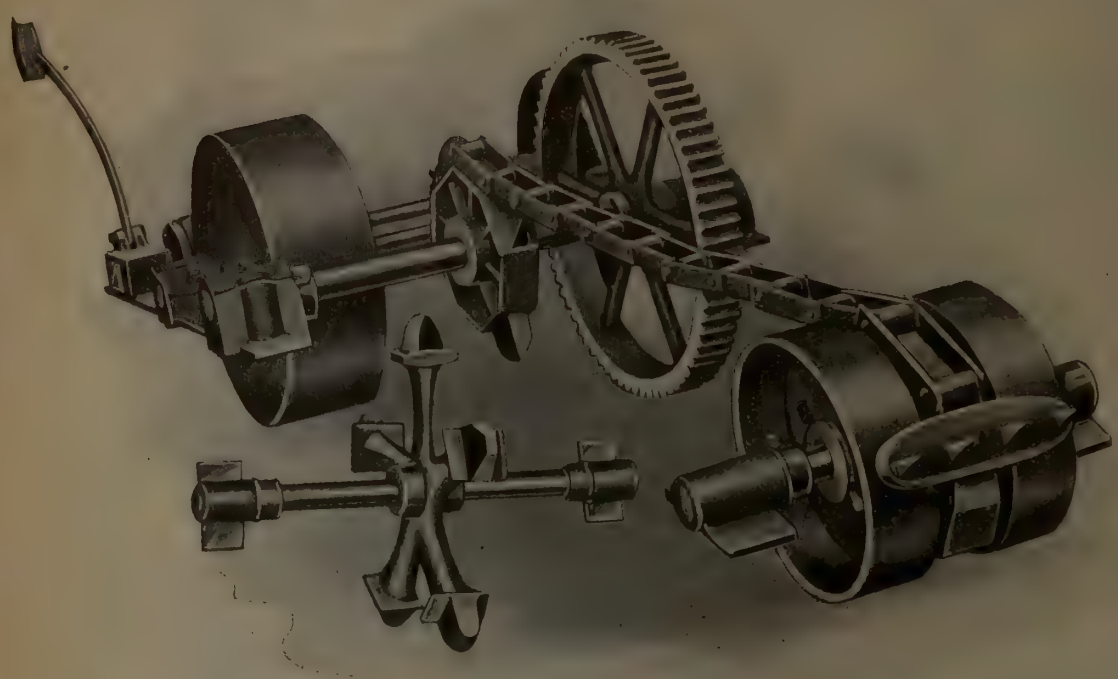
The Log Jack for Heavy Work



New Double Powered Log Jack

The accompanying illustration gives a correct idea of our new Double Power Log Jack, designed for hauling heavy timber into Saw Mills.

GEAR.—The large Gear Wheel is 36 in. in diameter, with 72 teeth, 4 in. face, and 1½ in. pitch.

PINION on intermediate Shaft has 13 teeth, 4 in. face and 1½ in. pitch.

PAPER FRICTION is 10 in. in diameter and 10 in. face. Iron Friction Pulley is 30 in. in diameter and 10 in. face.

CHAIN is made of extra heavy steel, and the bunks have steel spikes, the whole outfit being calculated for heavy logs.

Solve your transportation problems with a

Bell, Oil Burning Locomotive

A locomotive that will provide a speedy and economical means of lumber haulage, one that will work on inexpensive fuel, (kerosene, fuel oil, distillate or crude oils), and one that has a greater tractive power than a direct type locomotive of equal weight. In sizes 2 to 24 tons.

Small wonder that the "Bell" is in such extensive use when it embodies such wanted qualities.

Perhaps your haulage problems could be solved by an investigation into the merits of this greatest of all locomotives.

A post card will bring full particulars and entail no obligations.

Shoe Packs

Utmost Reliability, Combined with Maximum Comfort and Wear

Reliability is the important factor in considering lumberman's footwear. For this reason it has been our aim to embody reliability in every shoe which leaves our factory. A glance at the sample here shown will readily bear out this statement.

Copeland Shoepacks are made from best selected oil tanned leather. Every pair guaranteed, and made in Canada.

Let us send you our catalogue and price lists
A postcard will bring them

The Michigan Lumber and Skidding Harness

Work in the bush and in the lumber camp is of such a strenuous nature that it demands a strong, sturdy harness that will stand up under all conditions. For such work there is no harness made that excels the famous "Carson Quality" Michigan Lumber and Skidding Harness. It is made of the best quality oak tanned leather by the best Canadian workmen.
You will make no mistake in equipping your outfit with "Carson Quality" harness and horse equipment. Let us send you full particulars.

Send for Catalogue.

Sawmill Machinery

Built for long service and dependable operation

The construction, general design, and material which enter into the making of Bertrand Sawmill Machinery insures the millman longer service and a freedom from costly breakdowns.

These features have given them a steadily increasing preference throughout the industry until now they may be seen in practically every section of the country. Why not get full particulars?

Our line of sawmill and woodworking machinery includes planers and matchers, buzz planers, band-saws and resaws. Write for booklets.

Rugged Belts For Rugged Work

Rugged work is characteristic of a saw mill. This holds true generally from the time the logs are towed to the mill or hauled from the water until the sawn lumber is ready for sticking in the yards. There isn't any of the equipment, from board saw and planer through to stave saw or trunnel machine that has an "easy job."

To keep this machinery steadily at its work, turning out lumber to the full capacity, the belting must be more than merely something which transmits some power. It must be belting like G & K which transmits all the power your mill is capable of developing. G & K belting does this because it is made and put on the pulleys by a definite standard of engineering which leaves nothing to chance or guesswork.

One type of belt cannot do the work on every drive in a saw mill and give the proper distribution of power. In our Standardized Series Leather Belting, we have provided a belt for each different drive in a saw mill. In this series is Neptune Belting for use where dampness or water is encountered. There is also Spartan, which resists better than any other belting, steam, heat, cold, acid fumes, etc. Every G & K belt will give you rugged service, for it's built to give it.

Tradition was Disregarded When Goodyear Built Hose

THE beaten path of established customs has rarely been followed by Goodyear scientists.

Rapidly-changing industrial conditions demanded new and more efficient methods.

Breaking away from preconceived ideas of tire-building created the Goodyear Cord Tire—the finest tire in the world.

Applying the same analytical methods to industry, Goodyear redesigned Industrial Hose—scientifically developed it to meet the needs of present-day industry.

Take Goodyear Water Hose as an example.

Water Hose is rarely destroyed through high pressure. But every year thousands of feet is prematurely worn out because the *outside covering* is not sufficient to stand the constant scuffing and pulling over cinders, pieces of iron—against the edges of machines—and so on.

To overcome this, Goodyear Water Hose is built with an extra thick covering of exceptionally tough rubber. A cover which gives greater protection, *longer wear*—lowers costs. And a good inner tube and strong fabric are in keeping with its superior covering.

There is a particular Goodyear hose scientifically designed—as in the case of Goodyear Water Hose—for every Industrial use.

A man trained by Goodyear will be sent to study *your* hose problems—without obligation. Phone, wire, or write the nearest branch.

In Big Mills Everywhere in Canada

In Canadian mills where quality and quantity are equally important, Waterous Sawmill Equipment is used as a matter of course.

WATEROUS SAWMILL MACHINERY

As an example, the Spanish Mills Lumber Co., of Cutler, Ont., are using two Waterous 8 ft. New Model Bandmills for handling their daily cut of 125,000 feet in ten hours. More than fifty other large Canadian mills have installed these machines within the past five years.

One of them writes:

"We have sawed 20,000,000 feet this past season—our logs run about 40 to the thousand—and have not broken or cracked a saw."

Only good equipment will show a record like this.

Remember, we build everything for the sawmill. Whether you are running a portable outfit or are cutting 150,000 feet a day, Waterous Equipment is the best for your work.

It Lasts Longer if "Waterous-built."

MOLSONS BANK BUILDING, VANCOUVER, B. C.

WINNIPEG, MANITOBA

Waterous

BRANTFORD, ONTARIO, CANADA

LOG LOADING

Use your motor truck for this work by installing a BAY CITY WINCH.

You can load your truck or a trailer without other power than the truck engine. It saves time, money, men and labor.

Bay City Foundry & Machine Co.

1601 Water Street **BAY CITY, MICH.**

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

LOST !

Two—three—five—ten, precious minutes, yesterday, today, tomorrow—by the careless employee who is never in "on time."

Why should he? He knows he'll get paid for eight—for ten hours ——whether he works the eight or ten hours or not—that is, if his employer has not yet installed a time recorder.

How many minutes are lost from you each day? Enough to pay for an "International" in a short time. Think it over.

Write for full information.

EDDY'S FIRE PAIL for Bush Camp or Mill

Made of Indurated Fibreware without hoops, seams or joints, Eddy Fire Pails are practically everlasting.

No metal to rust or corrode. Lighter than wooden pails and more durable than metal ones.

Made in the Eddy plant at Hull—the home of the famous Eddy matches.

The E. B. EDDY COMPANY, Limited, Hull, Canada

Where the Strain is Greatest Specify

PATENT

The Waterproof Belting that will not Stretch

It is on the long drives—the heavy drives—that "Gripoly" particularly distinguishes itself.

There are many such instances in the mill—perhaps in your mill——where, due to unsuitable belting, the frequent breakdowns and short life of the belt sends transmission costs soaring.

If this has been your experience an investigation of the merits of "Gripoly" will bring you big returns.

Our representative is waiting for your enquiry. Why not get in touch with him today.

Maintaining a Standard

The quality of lumber, its manufacture and its grading are three prime requisites in maintaining a standard of production. When you get them all you know you are receiving full value.

With each shipment of our

White Pine

there is the quality because it is cut from the best growths in Ontario, the proper manufacture due to our excellent milling facilities; and the right grading because we invariably satisfy.

Try us with your next order.

Bear this in mind-

The car shortage is growing more serious each week.

The actual net shortage increased 28 per cent. from the second week in May to June 8th.

You should put your stock in good shape before the grain moving begins, which according to early reports will require all available box cars to handle.

McFADDEN & MALLOY

Red & White Pine **LUMBER** In Any Quantities

The above is supplied by us in all standard grades and dimensions. All lumber is of guaranteed quality and grade as ordered. Our location and facilities enable us to give our patrons the utmost in service and prompt shipments. Let us quote on your requirements. You will find our prices right, and our product satisfactory.

Mills at: - SPRAGGE, ONT. & BLIND RIVER, ONT.

Your Stocks will contain No White Elephants if You Place Your Orders with Us

ANY CHANCE of "white elephants" being among the shipments leaving our yards is made impossible by reason of our graders, who rigidly enforce our standard: "Quality First." It makes no difference whether your order be for a thousand feet or a carload—a rush order or otherwise—we give to each that same careful attention which means true satisfaction. A trial order would convince you.

ROGERS BUILDING - VANCOUVER

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of **maximum value for their dollar.** If you have not used "Utility" grades, write us —no others produce them.

Electricity in Your Mill

Is your electric lighting equipment giving you every possible satisfaction? Perhaps you have had trouble with that motor running your trim saw or the grinder? We have known of cases where a steam mill was wasting power by producing electricity by out-of-date methods.

If you have any electrical difficulties that you would like expert advice on—write our editor a line. He will be glad to help you. Perhaps he can help you twice a month through our columns. It is only $2.00 a year of 24 issues.

British Columbia

RED CEDAR

SHINGLES

—the standard on this continent for economy and satisfaction in roofing or siding.
—gives a weather surface which for durability and artistic appearance cannot be equalled by any type of building material on the market.

Our shingles are made from selected material—the giant red cedars of British Columbia—the finest stand of red cedar in the world.

Our shingles are made right—Our grading rules demand "Vertical Grain"—"Strictly Clear"—

"Free from Sap"—regulations which assure you of a product that will give the highest satisfaction.

Write us for a supply of our Dealer's Booklets — literature which gives just the facts about roofing and siding your customers want to know.

Service That Counts

WE are bent on giving service—service that means something to our customers. For **real** service means satisfaction, and our customers **must be satisfied.**

Our Service Yard at Logansport, Indiana, is one mark of service. It enables us to deliver promptly. The following is some of the lumber that can be shipped from there immediately.

Ash		Plain Oak	
1 " FAS, No. 1 & 2 Com. ..	14,860	1 " FAS & No. 1 Com.	34,545
1¼" FAS, No. 1 & 2 Com. ..	48,311	2 " FAS & No. 1 Com.	58,320
2 " FAS & No. 1 Com.	19,190	2½" FAS & No. 1 Com.	102,740
2½" FAS & No. 1 Com.	24,485	3 " FAS & No. 1 Com.	83,600
3 " FAS & No. 1 Com.	64,566	4 " FAS & No. 1 Com.	58,900
4 " FAS & No. 1 Com.	9,640		
Hickory		**Poplar**	
1¼" FAS No. 1 & 2 Com. ..	12,000	1 " FAS No. 1 & 2 Com. ..	48,200
1½" FAS No. 1 & 2 Com. ..	33,000	2 " FAS No. 1 & 2 Com. ..	44,180
2 " FAS No. 1 & 2 Com. ..	12,000	2½" FAS No. 1 & 2 Com. ..	18,110
3, 3½, 4 FAS No. 1 & 2 Com.	10,000	3 " FAS No. 1 & 2 Com. ..	33,440
		4 " FAS No. 1 & 2 Com. ..	16,770

If you wish you will find it convenient to have your representative inspect this stock at our Service Yard. We'll be glad to show him what excellent stock it is.

LUMBER and TIMBER

Carefully Selected and Graded

Basswood—We offer, subject to prior sale, one car 1st and 2nd, 10% No. 1 Common, 1½" x 9" and up by 6' to 16'.

Stocks at Our Mill—Large quantities of 2 x 4, 2 x 6, 2 x 8, 2 x 9 and 2 x 10" Spruce, in all lengths.

Fir Timber—We have a fine stock of Fir timber. Send us all your inquiries for anything from the Coast, as we have a representative there who will attend promptly to requests for quotations.

We are in an excellent position to supply mixed cars, also large block of mill flooring in 2" x 4", 5" or 6", which can be dressed on short notice.

SPECIAL OFFERING

20,000' 1" Clear Spruce.
15,000' 2" Clear Spruce.
50,000' No. 1 Hardwood Flooring.
2 Cars 1" Good Pine.
75,000' 1¼" x 9" x 6' & up 4th and Better Spruce.

Simonds Crescent ground Cross-cut Saws

There is no other cross-cut saw on the market that gives so much satisfaction as a Simonds Crescent Ground It is a fact, established by tryouts in the heavy timber belt, that a Simonds will cut 10 per cent. more timber in the same time, than other brands of saws. Not only is it fast cutting, but it is also an easy running saw, honestly made and ground scientifically. A Simonds Crescent Ground Cross-Cut Saw does not bind in the kerf, and is fully guaranteed.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol 40 Toronto, July 15, 1920 No 14

Fresh Spin to Industrial Wheels

The question arises on all sides: what about the demand for lumber this fall; what price will it command; will there be a surplus of dry stock and manufacturers left with quantities of unshipped forest products on their hands owing to inability to secure foreign cars? Numerous and diverse are the opinions expressed with regard to the future of the industry and as to the probability of the present values of eastern woods holding firm. Many believe that each succeeding month sees conditions more stabilized, and look for a promising season in the lumber arena by reason of the fact that men are more plentiful than usual and also more efficient, but, on the other hand, they view with considerable alarm, the increasing costs of logging, and mill operations, not only in the matter of higher wages, but also in camp provisions and other disbursements.

While prices in all lines of lumber ascended considerably, it is doubtful if they have kept pace with increased cost of manufacture. There have been flurries in the market and a few months ago there was a lot of speculative buying and strong competition for season's cuts. Now conditions are on a more substantial basis and a saner state of affairs prevails. Values in nearly every commodity rose sharply and then seemed to have reached the apex. Next they marked time for a short period and a decline set in. This tendency on the part of things in general naturally had its influence and effect on lumber, which is not a product of a week or a month's manufacture but of a whole season. A number of structural enterprises were halted, but there are many signs that great undertakings at present in abeyance will be proceeded with early next year. So far as any slump is concerned this is neither probable nor advisable. The excellent crop reports from all parts of Ontario are decidedly encouraging; in fact, throughout the western provinces the yield promises to be the greatest in years. All this tends to create a feeling of confidence and assurance in the future and naturally will counteract a great deal of the talk in regard to the collapse of prices.

While the financial and industrial situation is complicated at the present juncture by many issues, some seen and others unseen—and it is not possible to gauge accurately the future—there is every indication that business will be active this fall. A further tendency is manifested in the rehabilitation and re-establishment of financial and commercial affairs on a basis that existed prior to the war. As soon as the spectacular and feverish element is eliminated from world markets and the law of supply and demand again in operation, with both producer and consumer obtaining a clear conception of each other's position the fog, which has obscured the vision, will be raised and discerning ones will be able to descry the future with more certainty and assurance than they have for months past.

Summing up the distinct features of the last few months and the present trend of affairs, a leading authority, which has given careful study to the whole situation, remarks. "It seems probable that continued restriction of credit will present a barrier to the wild upward movements of prices which have characterized the period since armistice, but belief in a permanently lower price level in the near future is hard to justify. Declining prices in a world where almost every important article is in scant supply seem impossible. How long the shortage will continue is beyond prophesy. Unless labor conditions become more settled, it will take some time to remedy. Production has seldom been so slow and expensive as it is at this moment in many industries. Strikes and lowered efficiency of labor, difficulty and delay in obtaining raw materials, all contribute to heavy costs of operation, and at the same time retard production. Even were the present effective demand filled, there would still be in the stricken countries of Europe, an enormous potential demand, which may make itself felt on the market from time to time during the next few years, and in so doing give a fresh spin to the wheels of commerce all over the world."

Vision About to be Realized

It is contended by a certain town that it has too many shade trees and that some of them must be cut down in order to afford growth for the remaining ones. This is a most unusual complaint as most urban and rural communities have not enough possessions in the way of arboreal adornment.

It requires vision and faith to plant a tree in these days when most epeople expect their plans to fructify overnight. Herein lies the reason why forestry in the past has not made greater progress. It is not in the nature of an annual crop and too few are inclined to do anything for posterity, believing in the prinicple that "sufficient unto the day is the evil thereof." Men who view things in the large are the leading spirits spirits of a people and a nation. They have dreamed a dream which, at last, is being realized in the extensive reforestation plans now being carried out, not only by provincial governments but by pulp and paper companies, counties, townships and even private residents. A beginning has been made in Simcoe and other counties in Ontario, and it is hoped that the movement, which is encouraged by the provincial governments, will be warmly supported and that county and provincial officials will work together in an enterprise of a character which means so much to the future stability and industrial development of Canada.

It is only now that lumbermen and others are starting to realize fully the potentialities of practical, scientific forestry. The campaign of education and instruction has been long and at times disappointing but is now bearing fruit. The evidence is seen in the rapid growth of membership of the Canadian Forestry Association, extensive nurseries, the development of the aerial patrol service, the increase in the number of look-out towers, wireless telephones, forest protective associations to guard the timber wealth of Quebec, Ontario and New Brunswick in the east and British Columbia in the west against the fiery foe, which has done more to lay bare the great stretches of this great country than any other agency.

How We May Learn From Others

The agitation in the United States to force Canada to open her supply of pulpwood to the mills across the border, free from all restrictions, has focussed attention on Canada's pulpwood resources. While we have a good supply, there is evidence that the roseate estimates of certain paper mill owners in the States have no foundation in fact, and that there is urgent need for Canada conserving her resources.

The example of the United States should have its lesson for Canada. The ruthless depletion of American pulpwood has resulted in the agitation which would compel Canada to sell wood from Crown lands limits, without regard to the needs of our own industry, and without regard to the investment of Canadian capital in pulp and paper.

For the moment, the agitation has quietened, but it is certain to be revived under the stimulus of scarcity of wood and the abnormal demand of paper. The answer made by the various provinces to the Underwood resolution is sufficient to show that a renewal of the agitation will have no more success than hitherto, but this will not deter those who are behind the movement to secure our raw materials in order to convert them into the manufactured article. Canada has not such an abundance of industries that she can afford to jeopardize the most promising one of recent years by allowing any other nation to use her forest wealth without restriction.

The Trade Acceptance As An Asset

Despite an earnest campaign towards inducing all lumber concerns, retail and manufacturing, to adopt the trade acceptance as a part of their business curriculum, but little success has been achieved. A wonderful assistance would be rendered the government to-day were all commercial transactions exclusively handled upon the trade acceptance plan. A general use of the acceptances would unquestionably relieve the present strain upon cash supply of the nation and make less necessary the action of Federal Reserve banks in restricting commercial loans, says the "Lumber Trade Journal."

The commercial credit of a country is its most important financial resource. Its tying up discourages business and paralyzes industry. Any legitimate means for the conservation of such a vital resource should be utilized to its fullest extent. Consider the volume of this country's annual internal commerce and realize the amount of real commercial paper that could be based thereon. The conversion into trade acceptances of the big credits or open book accounts of the country would unquestionably strengthen and conserve a necessary national resource.

While there is a large amount of the commercial credit business of the U. S. handled as trade acceptances, its use is confined principally to the North. The lumber industry would find the adoption of the trade acceptance plan a valuable one other than as a conservation of a great national resource. The manufacturer who would compel his customer to furnish a trade acceptance would find the volume of claims largely lessened as the maker would hardly be in a position to make claims that were not legitimate at least. It would also do away with those 30 and 60-day discount customers all have on their books.

The lumber industry is thus vitally interested in trade acceptances. Trade acceptances being negotiable, all sales would virtually be on a cash basis. The financial gain to the industry would add materially to its dividends. Best of all the great commercial asset of America would be strengthened and made safe—its credit resource.

Editorial Short Lengths

The effect of the lumber scarcity, and its antecedent, the depletion of the forest, is being felt by the ambitious householder who undertakes to make his own repairs or improvements. Costs of material are rapidly mounting, and the expense entailed causes a delay in making repairs. In many cases, however, the necessity for repairs is due to delay in protecting woodwork. By the use of paint, much of the labor and expense of renewal would be obviated. It is remarkable how little thought is given to the protection of wood where it is exposed to the weather. The alternate absorption and drying out of moisture are conducive to decay. By painting the woodwork, moisture is excluded and the life of the wood greatly lengthend.

* * *

Mr. Dealer, take a few days off and go with Ontario Retail Lumbermen on their annual outing to North Bay and Lake Nipissing from July 30 to August 2. It will be a splendid trip and will be one of profit, instruction and pleasure.

* * *

The secretaries of the various lumber associations in Canada are the men who behind the scenes do a vast amount of work and keep the machinery of the organizations in motion. They are energetic, aggressive and quietly persistent in carrying out anything that falls to their lot. The result is that the different lumber bodies are alive and alert. As it is, these hardworking and conscientious officials are responsible for the prosperity, co-operation and development taking place within the ranks. How different their position is from that of another secretary who is identified with the U.F.O. and present at every political picnic. He is a perpetual platform speaker, evidently trying to run governments, direct policies, conduct referendums, harmonize varying interests and incidentally keep himself in the limelight. There are Secretaries and Secretaries.

* * *

In rendering service the retail lumberman is often expected to do more by certain patrons than should be carried out in these days when the scale of wages, delivery and operating expenses are so high. One firm who estimate that it costs them $3.60 an hour for a driver and operation of their truck, recently were asked by a customer to have 10,000 lineal feet of various-sized material shoved up by the driver to a second-storey window, an operation which would require fully two hours and take practically all the profit off the transaction. Complaints are frequently received that drivers do not deliver in the right spot and generally disregard the directions of the purchaser. On the other hand, the latter is not entirely blameless for he is often not explicit enough in his instructions and takes too much for granted. However, by a policy of mutual conciliation and frankness, much may be done to overcome these petty misunderstandings and increase the efficiency and reliability of the service. Just how far a customer can have his wishes met, depends largely upon his attitude, the extent and nature of his purchase, his relations with the firm, etc. A patron, who is disposed to meet the retail lumberman half way, can generally get little acts or courtesies performed that a crank, a blow-hard or a brow-beating individual fails to put across.

* * *

Wood is so adaptable to every construction use that a great many persons think all it needs is the carpenter, says a prominent lumber authority, but it must be remembered that some wood is more adaptable than another to a certain purpose; also that while it may be that in other forms of art "the more difficult the medium, the greater the art," in architecture the more adaptable the medium, the greater the possibilities of true art in its use, and true art must include a certain amount of restraint. Wood is not only adaptable to art and to permanency but it is adaptable to change, not simply the change here and there of a detail during construction but the change that is inevitable to all construction in the course of time, as the adding of a new wing or a sleeping porch to the home, the converting of a stable into a garage and minor changes which are necessary to install newer methods of ventilation. There is always a little changing and in the course of a generation or two this changing is an important feature to be considered. It is in this respect that the adaptableness of wood may be emphasized. The builder must use wood intelligently and look to the proper construction of chimneys and other vent shafts, as nearly half of all fires may be traced to faulty construction in chimneys or fire places.

How Lumber Manufacturers View Outlook

Operating Conditions Are on the Whole Favorable with Labor More Plentiful Than Last Year—Transportation is Hampered at Numerous Points

Reports received from various parts of the north and east indicate that lumber manufacturing conditions are progressing favorably and labor and other contributing agencies are better than they have been for a number of seasons. There is still considerable complaint about the car service and the inability to make shipments across the border. The transportation situation is more acute at some points than at others. It is interesting to note the views as expressed by a number of representative firms and how they view conditions, present and prospective.

Graves, Bigwood & Co., Byng Inlet, Ont., report that manufacturing conditions with them are proceeding nicely and that their cut will be fully as large, if not larger, than last year. Labor is more plentiful and more efficient than in 1919 and while the supply of logs on hand is not large at the present time and there was some difficulty in getting them to the mill, owing to low water, still affairs on the whole are very satisfactory and matters are running more smoothly than for several seasons past.

The Hocken Lumber Co., whose plant at West River. Ont., recently began operations, report that labor is more efficient than last season, and, while manufacturing costs are higher, there is a better selection of men. The mill is cutting about 40,000 ft. per day and the output of white and red pine will be, perhaps, a little larger than last season. The demand for lumber at the present time is good and the outlook promising.

Lumber May Go Still Higher

The Devon Lumber Co. of Pine, Ont., write that their drive, amounting to 134,000 jack pine logs, is practically finished, and they expect to saw about 7,000,000 ft. of lumber this season, as compared with slightly more than 4,000.000 ft. during 1919. Writing the "Canada Lumberman" A. L. Morse, manager of the Devon Lumber Co., says: Mill labor is about as hard to get as it was last year and rather more difficult to keep, and there is a tendency to ask for higher wages about every pay day. During the past two months it has been practically impossible to obtain foreign cars, for shipping to the United States, but the situation has been relieved, to a certain extent, by the supply of coal cars, of gondolas, which have been fairly plentiful. At the present time we have a good supply of this type of car, but are unable to get foreign boxes. We have not sold any of our cut this year, to date, and there does not appear to be a very active demand for the new stock, although the purchasers of our old stock are very impatient for delivery. The lath market, in particular, is very quiet. We hope, and rather anticipate. that there will be a sufficient increase in the price of lumber, this season, to make up for the extra cost of logging over last year's figures but, just at the present time, there is no particular indication that it is going to turn out that way.

Drives Now Coming Along Well

Graham & Shannon of Spanish Station have sufficient logs to stock their mill for a long cutting season, but were recently shut down temporarily owing to backward drives. Market fluctuations do not affect this firm as their output is usually all sold the previous winter. Foreign cars are difficult to obtain at present, and it would help matters greatly if the situation eased up. A large portion of the cut of the firm usually goes by rail to the United States. Some shipments are, however, made by boat. Labor seems to be plentiful in the Latchford district.

The Spanish River Lumber Co., Cutler, Ont., declare that lumber manufacturing conditions in their district are not quite as good as last season. Wages are somewhat higher but labor is more unsettled and the cut of the company will be about the same as last year. Mr. W. J. Bell, general manager of the company, in speaking of shipping facilities, says they are having some difficulty in getting sufficient foreign cars for their needs, but as the great bulk of their lumber is carried by boat, they have not experienced any very serious drawback. The prices obtained for lumber this season are not quite commensurate with the advanced cost of production and operation.

Will be Smaller Crop of Logs

The Hope Lumber Co. of Thessalon, report that their output will be about the same as last year with about six months' run for their sawmill. They have a full crew of men and are paying about 20 per cent. more wages than last year. Most of their stock goes by water shipment and they have had some difficulty in securing cars when they needed them. All the season's cut of the firm is sold, but they have been receiving numerous inquiries. Mr. C. N. Carney, general manager of the company, remarks: We figure the cost of logging will be more this year than last, as feed for horses, flour and some of the staple articles used in camp are higher. There will be a smaller crop of logs put in the coming season.

The New Ontario Colonization Co., Limited, whose office and mills are at Jacksonboro, Ont., say that from present indications they question very much as to whether they will be able to increase their last year's cut of lumber, which was not sufficient to supply the demand. Woodsmen are still very scarce, which makes it uncertain as to the summer logging operations of the company, who are planning to work every man they can secure. W. K. Jackson, Buffalo, president of the company. states that they have shipped out their entire last year's cut and are now sending out this year's cut. The demand is fair and steadily improving. Our real difficulty is to secure cars to move out what the company have sold.

The Dennis-Canadian Co., Whitney, Ont., state that lumbering operations are about normal in their district and the supply of men sufficient to keep the work going nicely. The wages are the highest ever known. There is but little shipping being done as the dry stocks were all sent out early in the spring and the new cut it just now getting ready to be moved. The output of the company will be larger than for the past few seasons and mostly sold in advance sufficient to cover additional costs.

Shipping Conditions are Not Good

The Utterson Lumber Co. of Utterson, Ont., report that their output of lumber this season will be about 1,000,000 ft. Although prices are about 20 per cent. higher, their cost of labor and supplies have gone up fully 30 per cent. more than last year. Logs are costing 5 per cent. more per M. and the assessment on the Workmen's Compensation Act is nearly one-third higher than a year ago. The company are under the impression that, faced with these conditions, lumber manufacturers will not realize as large a profit for their trouble and investment this year as they did twelve months ago. Labor in and around Thessalon is scarce and not at all efficient, while shipping conditions have been very bad and, from present indications, are likely to continue so.

How Costs are Still Climbing

R. B. Herron & Co. of Tionaga. Ont., report that they have not experienced any shortage of labor in their operations up to the present, but find a rather restless feeling among some men. In some cases men prefer travelling to working, which, no doubt, is more expensive and less remunerative. The company say that their shipping facilities have been very satisfactory so far this year and they have been able to secure sufficient care to take care of their output.

Mr. Herron says: I think that our conditions are about the average to be found in this vicinity; everybody seems to be getting along very well with their sawing and shipping. Of course, the exceptionally high cost of supplies and the high wages being paid for the amount of work being done in return makes operating expensive; consequently it is very hard to estimate where the cost of logging and manufacturing is going to stop. Even with the present high prices of lumber, unless supplies and labor take a change the industry is very uncertain.

Others Report from the North

Conkey & Murphy of Latchford, Ont., are sawing about 25,000 ft. per day and their cut this year will be larger than last. The firm expect to produce about 2,000,000 ft., while in 1919 the output was only a little over 1,000,000 ft. They also took out about 6,000 cords of pulpwood along the Montreal River, which was sold to J. R. Booth, of Ottawa. Conkey & Murphy report that the demand for lumber is fairly good. but that it is particularly hard to get cars to ship across the line. They have orders four and five months old and cannot secure cars to fill them. In the Latchford district labor has been scarce all winter and the costs of putting lumber in the pile is very high. If the present high cost of living and high wages continue, it is not likely the cut in the north will be increased any during the coming fall and winter.

The Lake Rosseau Lumber Co., Limited, Boakview, Ont., have just wound up operations after a busy period of years. They com-

pleted the cutting of the timber on their limit in December, 1918, and finished manufacturing it in June of the following year. Before March, 1920, the lumber was all sold and shipped out. Since last winter the company have been disposing of their stock of slabs and have just got the last of them shipped.

The Lake Rosseau people report that there has not been quite so much trouble in getting men as there was last year and the year before. The car supply has not been bad since the opening of navigation on the big lakes for the grain boats, but during the time the boats are not running there is generally a shortage of cars owing, no doubt, to so many of them being sent west to handle the grain traffic.

A northwestern Ontario firm sent the following interesting information: Manufacturing conditions are fair with us for this season. Wages are high, but help is reasonably plentiful and fairly efficient. Our output of lumber will be smaller than last season on account of a shortage of logs and the demand for our product is only fair. The car supply is all right. Our home market is taking very little lumber at the present time and we are exporting considerable to the United States but there are signs of weakness in this market as well. We hope that improved crop conditions throughout western Canada will have a tendency to increase the demand for lumber.

J. H. Reid, of Jarlsberg, Ont., says he will have twice his usual cut this season and expects to realize prices commensurate with the advanced cost of production and operation. The supply of men is plentiful, wages very high, shipping facilities good, but demand at present is rather quiet.

May Be Steadying Down Of Prices

John P. Newman Sons, of Wiarton, Ont., say they are completely cleaned out of dry stock and have been unable to supply orders on hand. This year their stocks are somewhat smaller than last, and 1919 quantities on hand were below normal. The severe winter, deep snow and bad roads prevented larger stocks from coming out last winter in the Wiarton district. Continuing, the firm say: The labor problem has been more satisfactory than one year ago. Although wages have advanced about 20 per cent. in that time we have been able to secure a more satisfactory class of help. The prices of lumber have generally been well maintained since the upward move in prices stopped, although it is our opinion that there will be some steadying down of prices when the new stock comes on the market.

The Pigeon River Lumber Co., of Port Arthur, Ont., remark: Regarding lumbering and manufacturing conditions in this district, we would say that our output will greatly depend upon whether we can get the drive down in time. Men are fairly plentiful but our output of logs was considerably below normal. We had no trouble in getting cars but the market outlook for this vicinity is not very promising for immediate benefits just at the present time.

F. C. McInnes, Leeburn, Ont., says he has rented his mill to Farquhar & Taylor for this season's cut, which will be about 125,000 ft .of birch and maple and about the same quantity of hemlock and balsam.

Hayward Lumber Co. is Progressing

The Hayward Lumber Co., Limited, Edmonton, Alta., are constructing a new sash and door factory, 66 x 164, two storeys high. This concern was founded in 1905 by G. E. Hayward, having headquarters at Vermillion, Alta. In 1916 they moved to Edmonton and took over the sash and door factory and lumber yard conducted by the Northern Lumber Co. The new plant will be equipped with modern machinery, including machines manufactured by such well-known firms as P. B. Yates & Co., of Hamilton; American Woodworking Machinery Co., Rochester, N. Y.; Cowan & Co., and Canada Machinery Corporation, of Galt, Ont. A Grand Rapids vapor kiln is being constructed. The equipment will be driven by electric motors and the power plant used for heating purposes only. About 100 men will be employed and such lines as windows, doors, interior finish, store fronts, store fixtures, etc., will be manufactured.

This firm operate about 20 retail yards throughout the West and a large proportion of the product of the new factory will be disposed of through these yards. The cost of the new buildings, not including equipment, is anticipated to run in the neighborhood of $100,000. G. E. Hayward is the president of the company and John Hening, secretary-treasurer.

National Retailers' Convention in St. Louis

The fourth annual convention of the National Retail Lumber Dealers' Association will be held in St. Louis, Mo., on Monday, Tuesday and Wednesday, September 6, 7 and 8, and it is expected that the gathering will be attended by over one thousand delegates, a number of whom will be present from Canada. Charles A. Bowen, of Detroit, secretary of the N.R.L.D.A., in a letter to the "Canada Lumberman" states any retail lumberman will be welcome and invites as many as possible from the Dominion to come to St. Louis, assuring to them a warm welcome.

There are many problems to be solved and the gathering will afford every opportunity to exchange ideas and information and participate in the discussions. Mr. Bowen adds:—

We want to urge you to arrange to be at this conference and to bring your competitors with you. Monday, September 6th, will be devoted to meetings of committees, association secretaries, board of directors and officers of the association. The convention proper

C. A. Bowen, Detroit, Mich.
Secretary of the National Retail Lumber Dealers' Association

opens at 10.00 a.m. Tuesday, September 7th. St. Louis is a fine city; is centrally located and an important business centre. It is the logical point for our conference this year. The St. Louis retail lumber dealers are a wide-awake, progressive body of business men who are planning on entertaining you royally outside of convention hours. They and our association also especially invite the ladies who will be entertained during their stay. It is only a few weeks until the dates set for the big conference. We expect you to attend. Make your arrangements now and prepare accordingly.

They Will Confer on Freight Matters

The Transportation Committee of the Wholesale Lumber Dealers' Association will hold a conference with the members of the Canadian Freight Association at the Union Station, Toronto, at 10 o'clock on the morning of Tuesday, July 20th, when certain items in reference to the new railway tariff No. 14, will be taken up. These refer particularly to radical departures in the weighing of cars, elimination of allowances, alteration of estimated weights, etc. It is thought that an amicable agreement will be reached in connection with the matters which have been under discussion and consideration for some time.

Railways Want To Jump Rates

The Canadian railways want an increase in rates, claiming that the present scales are insufficient to provide a profitable return.

Recently a delegation headed by President Beatty of the Canadian Pacific, Chairman Howard G. Kelly of the Grand Trunk management board, and President Hanna of the Canadian National Lines, along with a number of other high officials of the various lines, were closeted with the Government at Ottawa.

While no official statement was issued and secrecy was preserved, it is understood that the rate question was up, and also the demands of various railway orders for higher wages, demands which are said to threaten trouble.

Although the question of rates is one for determination by the Railway Commission, the Government is interested by reason of the extensive state ownership. Any increase would be general, and would apply to all of the lines, whether Government or privately owned.

The question was discussed in the House this session and drew considerable opposition to the increase proposal, particularly on the part of western members. The whole matter will receive the consideration of the Government.

What Advertising Will Do For Retail Dealer

Central Thought in Publicity Should Be an Appeal to the Sentiments Through Beauty, Comfort, Pride, Service or Economy—Securing Results

There are several general reasons why so many retail lumbermen take so little interest in direct advertising, circular letters, newspaper space, etc. To look after the details of a lumber yard takes a whole lot of time, and a fellow is always busy or tired just at the wrong moment.

Lumber ads of whatever nature should be written just after breakfast, while the exhilarating influence of a cup of "Java" coffee is pouring through the system; and preferably when there is a good sized cash job hanging fire. Then, having prepared the copy, let it rest until the transactions of the day suggest reflection and revision, and work it over at least once before going to the printer.

The first principle of salesmanship is to attract attention, create interest, and so on through a natural sequence, up to the closing of a deal, and a dry, lifeless ad, will not do any good.

Lack of time is not nearly the main reason for the dealer neglecting to advertise. We just don't realize the value of it for trade building and trade drawing, but are all the time keeping our good eye on our neighboring yards, instead of the hundred other hustlers who crave a bankroll, and who bait their hooks in such attractive ways that greenbacks—printed for no other earthly purpose than to purchase lumber—get side-switched for white buck shoes, dollar bacon, pleasure trips, pianos, or automobiles, when the helpless victims are honestly trying to save it to buy a new home or rebuild an old one.

I have no objection to these luxuries except when they stand in the way of the purchase of building materials.

About the best way to get an idea of the real hard down effect of good advertising is to study your own case and remember the many times when advertising caused the chink to slip from your own affectionate grasp like buttered orka.

Here is an instance frequently duplicated. In our household the law of supply and demand is beginning to assert itself, and there is a surplus of buys and a shortage of furniture. This is made apparent to us when we see in the paper a picture of a beautiful suite of imitation Circassian walnut, with the price marked up thirty plunks, and then marked back twenty. So it is promptly agreed that we will use less ice, and milk, and cut out the "movies," so that by next month we can pay the first instalment, and get some real nice, serviceable furniture. Our courage is strengthened when we see another furniture ad, but the furniture man doesn't know we are waiting for pay day for the chance to trade with him, and he only advertises in "spurts" like a lumber puncher.

About the time we get the money, the furniture man's space is filled with an ad of Levy & Son, who keep everlastingly at it, and this week he shows the latest style of men's hats, offered at reduced price, to make room for another dozen of the same kind. Also a brand new lot of silk umbrellas guaranteed to turn moisture like a mesquite brush. To admit the truth, we don't need these things, but our attention is diverted, and somehow we just drop round that way to see how they really look. The $7.50 hat is only $6.98, and it sure looks nobby, and that quarter ounce of mercerized cotton stretched on bamboo stick and haywire is a beaut. Also, there is a matinee at the Majestic, and a wrestling match in the town hall, and it becomes perfectly clear and logical that we can wait another month for the furniture. And we do.

Some lumbermen don't believe in advertising, nor in ways and means of influencing the human element in trade, honestly contending that price is the only thing that gets business.

But I recall that the day after I bought that hat at Levy's I saw one in another store exactly like it for $5, and found out that I could have had a better bargain in a dozen other places. Then what did Levy's ad do? It suggested the idea of buying a hat, and it led me unconsciously to Levy's store, because his was the name that I saw in connection with the original idea. It therefore eliminated the idea of competition with other hat dealers, and worked successfully against the furniture man, who laid down at the logical moment to the enterprising Jew.

Our chief trouble has been that we are dealing in raw material, and no raw material, except fresh oysters, appeals like the finished product. No, John Henry. We have to jump the woods, the mills, and the yard, and land on the front porch of a cozy bungalow, to begin effectively speiling about our stock in trade.

The picture of a nice, smooth lumber pile, sloping gently down to the rear, and projecting with a perfect incline to the front, with a man on top shoving down a board, or a prospective sucker of skeptical turn of mind searching for defects through a big magnifying glass, is good as far as it goes. It makes four bits for the stock cut manufacturer, and saves the printer some labor on composition, and there its usefulness ends. Not that all "canned" advertising should be condemned, but most of it gets no results for the reason that it does not act on the imagination of the reader.

The central thought in advertising any line of building material, is to appeal to the sentiments through suggestions of beauty, pride, comfort, service, or economy. And when the population of your territory is in a rut, you have this way of reviving them in a profitable manner, by advertising. It is a fact that a building idea can be started on its way, and that it may result in a contagious epidemic.

But you can't start it by advertising: "When you need lumber come to see us." Levy's ad didn't say: "When you need a hat come and see mine." It said that the hat was nobby, stylish and popular, and the picture showed a man wearing one who wore diamonds and a walking cane.—D. E. Mead in Gulf Coast Lumberman.

Will Inaugurate an Aerial Patrol

Among the firms that have been quick to realize the advantages likely to result from putting into force an aerial service is that of Price Brothers' Limited, of Quebec City, whose limits cover an area of over 8,000 square miles, scattered throughout the eastern part of the province of Quebec.

Its operations will consist of photographing with special aerial cameras a part of the limits of Price Bros. and Company. The photographs once developed will either be enlarged or reduced to a predetermined scale, built into mosaic maps and then re-photographed into finished aerial maps, ready for comparison with known surveyed ground. Special photographs of dams, river heads, burnt areas, etc., will be made from photographs taken at a height of 1,000 ft.

To facilitate this work the maps of the province of Qebec have been squared according to the military system used during the war, and approved by the Forestry Branch of the Provincial Government of Quebec.

The machines to be employed are two Martinsyde type "A" Mark 1 seaplanes, convertible into land planes. Their climbing power with full load of 1,000 pounds is 10,000 feet in 15 minutes. They have a maximum speed of 127 miles per hour. The pilots employed are late officers and instructors in the Royal Air Force, who had had an extensive experience in flying various makes of planes equipped with different kinds of engines. The mechanics also are late of the Royal Air Force.

My Creed of the Out-of-Doors

I believe in the wonder of the out-of-doors, in the inspiration of the stars, and in the allurements of life in the open

and

I believe in the strength of the hills, in the silence of the night, and in music of the birds and trees.

I believe, also, that my body was made for action, that my mind was made for thinking, and that my heart was made for loving in unison with the life in nature.

I believe that to laugh and sing, to swim and walk, to study and play, to eat and be happy, to be kind and free, to grow strong and good, is my God-given right.

I believe too, that to be happy, I must be good, that to be worthy I must be kind, that to be loved I must think love.

I believe that God is as near as man, that I can hear Him in the brooks and pines, and that happiness and lasting peace are mine, as I live in the atmosphere of kindness so near me in the life or the open world.

RUDOLPH CARL STOLL.

New Lumber Commissioner Here from Coast

Lieut. Loren L. Brown Enters Upon New Duties in Toronto—Attractive Quarters Which Display to Advantage the Forest Products of British Columbia

Lieut. Loren L. Brown
Newly appointed B. C. Lumber Commissioner for the East

Lieut. Loren L. Brown, M. C., of Vancouver, the newly-appointed British Columbia lumber commissioner in Ontario and the east, has arrived in Toronto and entered upon his new duties at the attractive offices and display rooms, 1 Adelaide St. East.

Mr. Brown succeeds Mr. Wm. Robertson, who has been acting commissioner for several months past and is returning to Victoria where he will resume his former duties in connection with the Forests Branch of the Department of Lands. Mr. Robertson has won the regard of many during his stay in Toronto but is naturally anxious to get back to his wife and family and his warm friends on the Coast.

Mr. Brown is already becoming acquainted with the details of the work and calling upon various members of the industry as well as getting plans in shape for further extension of the work. Good results have been achieved by the B. C. Forest Branch in the lumber trade extension line in Eastern Canada, with the happy outcome that British Columbia forest products have become popular and more widely known than ever.

Until recently Mr. Brown was superintendent of the Dominion Forest Products Laboratory attached to the University of B. C. He has both a practical and technical knowledge of the lumber industry and building trades, and as stated in a previous issue of the "Canada Lumberman," is a graduate civil engineer possessing the degree of B.Sc. and being an associate member of the Engineering Institute of Canada. In addition to having made a special study of British Columbia woods, he has had practical experience in the lumber mills, and for some time under the former government was superintendent of important building construction in the province.

The reception and display room of British Columbia Lumber Commissioner at 1 Adelaide St. East, Toronto, finished in B. C. Fir

Mr. Brown who was attending McGill University, Montreal, when the war broke out, enlisted as a private at Montreal on May 29th, 1915, and arrived in France in September of that year. There he transferred to the Canadian Engineers, and for his excellent achievements was given a commission in May, 1916. In June of the following year he was awarded the Military Cross for his work with the First Canadians.

It is understood that the Department of Lands in British Columbia, at the head of which is Hon. T. D. Pattullo, intends prosecuting with greater vigor and system than ever trade extension work in the lumber line, and with this in view central and attractive quarters have been opened up in Toronto, where all kinds of western woods are on display in their natural state. The offices are visited daily by a large number of Toronto citizens and others from various parts of Ontario and a cordial welcome awaits everyone.

The purpose of the B. C. lumber commissioner's office is along the line of propaganda work. No sales are conducted or made but information of all kinds in regard to the timber resources of British Columbia, the species of wood grown, its uses, characteristics, adaptability, etc., are fully explained, so that the Eastern manufacturer and builder, as well as ordinary consumer may become thoroughly acquainted with the merits of the forest products of the Pacific Coast province.

There has recently been received at the office numerous sample pieces of B. C. forest products which are much in demand among architects, contractors and prospective builders. The interior of the new office displays to advantage the many beautiful qualities and splendid finish of Douglas fir and other Western woods. The whole of the panelling is finished in natural wood and there are also shown various samples of western red cedar, western hemlock, Sitka spruce, and Douglas fir in different finishes. Tables and settees of Douglas fir form an attractive port of the furnishings of the most inviting and attractive quarters of the B. C. lumber commissioner for the East.

Wooded Assets of Pacific Coast

An interesting report recently issued by the British Columbia government contains the following information.

(a) Merchantable:—Export data are not available as to what area may pe called merchantable and what is not, but 25,000 to 30,000 square miles may be classed as merchantable and accessible. The estimate is made as follows: 52,000 square miles or slightly over one-third of the tota area is estimated to be timber land without reference to its accessibility. (This includes all land on the Coast bearing 833 cubic feet or more per acre). About three-fourths of the total stand of timber is on the various forms of alienations—chiefly leases and licenses—comprising about 20,000 square miles. This includes the bulk of the saw-timber now accessible and merchantable. There is an additional area of probably 5,000 to 10,000 square miles of accessible Crown timber, making a total of 25,000 to 30,000 square miles. About 5,000 square miles of the total will be suitable for agriculture when cleared.

(b) Unprofitable or Inaccessible:—22,000 to 27,000 square miles of timber land may be classed as inaccessible at present; 97,000 square miles is young forest in various stages of restocking and growth.

Other Land (unproductive areas)—148,000 square miles is above merchantable timber-line, 40,000 square miles is below merchantable timber-line, and includes lakes, swamps, rivers and areas too dry, too rocky, or too steep to grow merchantable timber.

Western Red Cedar (Thuja Plicata), also known as Great Arborvitae and Pacific Red Cedar—Red Cedar is one of the most important trees of British Columbia, both commercially and in point of size. The veteran or full-aged trees attain heights of 150 to 200 feet. The diameter (breast high) ranges ordinarily from 3 to 8 feet, but trees having diameters from 10 to 16 feet have been found. The total stand is about the same as that of Douglas fir; i.e., 22 per cent. of the saw timber of British Columbia.

Standing Timber of North America

	Cubic Feet
Ontario	13,333,333,000
Quebec	27,500,000,000
New Brunswick	1,588,888,000
British Columbia	30,500,000,000
United States	230,500,000,000
Total	305,338,221,000

Will Lumber Associations Brand Their Product

Wood Goods Should be Advertised on Merit as Building Material and the Various Grades and Sizes Guaranteed, Declares an Old-Timer

When I was a youngster in the retailing game we had but one kind of lumber to handle. It was a number of years before any other than white pine was on the market, and so far as practical knowledge was concerned we knew little or nothing of any other wood as a building material. Consequently neither ourselves nor the building public had any other choice but to use it. Notwithstanding this, however, we were bothered a good deal from their being no standardizing of grades, thickness, widths and matching. Every manufacturer was a law unto himself in this regard, and "did what was right in the sight of his own eyes," having always his own particular interest in mind and under no restraint but competition. Consequently the retailers had some choice after all in making their selections of who to deal with for getting good bargains in the way of "rich, creamy grades," as we used to term them, says C. H. Ketridge, in the "Mississippi Valley Lumberman."

There were mills that were distinguished for the grade excellence of some one or two particular articles. One mill would so grade its No. 1 Common that a retailer could select while, on the other hand, the dealer would spot the mill where this grade was "skinned" too close to suit him, and so on all through the different grades. Some mills were more liberal in their grading than others and after a dealer had been in the business a year or two he knew where he could do the best for what he wanted.

The older dealers now can remember seeing cars loaded with lumber with a sign nailed on them showing the name of the concern shipping them. When the load was on a flat car, some selected boards from the grades in the shipment which were placed edgewise between the stakes and this sign was stenciled on them. This was to advertise the excellence of the grades and the concern shipping them.

Making Known His Business

In those days pretty near every retailer did the same thing with the loads he sent out. In some cases, no matter if the load was only No. 2 Common a finish board was stuck up on each side of the load and the name of the yard where it came from stenciled on it. Putting the clear boards in this way on the outside was simliar to the well-known practice of putting the big apples on top in the barrel. These stenciled signs on brands as you might call them, were about the extent of the advertising that some dealers indulged in; this, and similar signs on fences on the roads leading to town. There were a few mills and wholesale shippers who put this stencil of their concerns more or less on pieces of dimension and boards in their shipments. It was in the nature of a brand.

I was reminded of this practice one day last summer when looking at the process of wrecking an old house that was built over fifty years ago, and I saw on the edges of some of the piece stuff and surface of the sheathing boards the name of a Chicago wholesale concern that has passed into history; and scattered all over this middle west there are thousands of old houses built of white pine that in this way perpetuate the names of the early manufacturers and wholesalers, and also those retailers who put their brand, too, on the stuff as it went out. Unfortunately, though, it will never be seen till the old building is being repaired or taken down to be replaced by a new one. When we were putting out stencil brand on the loads we sent out, the idea of its serving to keep us from being forgotten and letting the coming generations know that we had been on earth, never entered our heads, and doubtless we would have ridiculed it if mentioned, for such a sentiment would not have appealed to us at the time. But there comes a time in one's life when this kind of sentiment has a value not hitherto realized.

We Like to be Remembered

We all like to be remembered for what we have done, and it occurs to me that it would be a good idea for a retailer to have an inexpensive tablet made and inscribe on it his name and the date of selling the materials for the building on which the tablet is placed. I merely make the suggestion, and if it should be favored by anyone, he can work out the details of making it practicable. The idea itself is not new. It is simply putting an old idea to a new use. You will see on public buildings the names of the architect, contractor, and officials inscribed on the cornerstone, as evidence of their taking a pride in their work, and, therefore, why should not a lumberman take the same kind of pride in the buildings he has sold and have it recorded in this way?

This idea of recording one's self in this manner was once more common in the building trades than it is now, when the individuality of the workman is merged into the union man, and all are supposed to be alike. When I was serving my apprenticeship, I was taught that I must put my mark on the face edge of every piece of lumber that I dressed and jointed for use. This mark I chose for myself as did every other workman. It was done so as to show which was the face edge, and also when it was put into place, the boss would know who had slighted his work. The workmen on a job were known by their particular marks or brands, as you mind to call them.

An army officer who was over in France related to me this incident in his experience. He was billeted in a town that had suffered severely from the enemy shelling. In the ruins of one of the larger buildings he noticed on every one of the stones dislodged a distinguishing mark chiseled out by the workmen, and no two of them were alike. Making some inquiries, he found that the building had been erected some time during the ninth century, and probably by the guild of operative masons that flourished in those early times. I know this will interest you who have learned something about marks in another place.

The Trade Mark of To-day

This same idea of marking or branding a product of skill, has been applied also through centuries of the modern era to the products of industrial merchandise, but it is so common we do not realize the fact and its significance. There are very few articles of manufacture but what have the mark or brand of the manufacturer on it and for the purpose of distinguishing it from others of the same commodity. As is well known, there is a natural law pertaining to these trade marks and penalties for their infringement. Consequently they have a particular value.

The primary idea of this trade marking was to protect the degree of excellence the maker put into the product as being superior to any other, and the real value in trade of any trade-marked commodity consists of its quality being kept up to the assumed standard of excellence. Otherwise it becomes a symbol of unreliability. Therefore, the adopting and advertising a trade mark carries with it an increased degree of responsibility because confidence is something that takes a long time to build up but only a little while to destroy.

New in the Lumber Industry

Although trade marks have for centuries been a common feature in the mercantile world, yet, strange to say, until within the last two decades, they have been comparatively unknown in the lumber industry. Manufacturers have had their own particular brands which they used on their office stationery and in their advertising, but it was hardly ever used as a stamp on their product, with the possible exception of shingles. The branding of shingles has been a practice universally followed by shingle makers, and is more for the retail buyers and builders than for the consuming public.

Notwithstanding the establishing of standard rules of manufacture, there has always been more or less difference in the qualities of shingles under the various brands, and in many cases, the brand on the outside of the bunch has meant nothing so far as quality was concerned.

As far as my knowledge extends on the subject, the association of cypress manufacturers were the first producers of lumber to put a trade mark on their product, and for some time they were the only ones in the trade to follow the practice. It proved to be successful and it was not long before it attracted the notice of other lumber manufacturers. If I am not in error, I think it was the Long-Bell Lumber Company of Kansas City that took the initiative of putting their trade mark on every piece of southern pine lumber coming from their mills. And now, I understand, there is a prospect of the example being followed by other concerns. This is a form of competition that was little expected years ago would ever come about in the lumber industry, but it is one of the logical results of individual lumber manufacturing concerns advertising to the public the merits of their own particular product. For in doing this the natural desire was created for the public to use it and having no other way to let the consumer know he was getting what they advertised. They insured him this by putting their brand on it after the fashion of manufacturers in other lines, and after once embarking on the project of publicly advertising the products of their mills, they were justified in doing

this, and at the time it seemed to me they were rendering a service alike to both retailers and consumer for it gave them a guarantee of what they were buying. Back of all this advertising, of course, is the idea that people will go to the retailer's yard and want this advertised lumber with the brand on it, just as they go to a store and inquire for a certain make of safety razor or fountain pen, and don't want any substitute.

A New Wrinkle in Selling Lumber

This is decidedly a new wrinkle in selling lumber and a shrewd one, but it's a part of the emulative feature of the new competition in merchandising. Like every other change, however, it brings with it the requisite for adjustment and the retailer is the party who has to do it. It seems though that it is not meeting with the unqualified approval of those dealers who have had the experience of having customers come and want the branded lumber.

At the meeting in April of the American Lumber Congress, some of the members of the National Retail Lumber Dealers' Association held an informal meeting of their own, and expressed their disapproval of branded lumber in the following language, which I give here for the information of those who perhaps did not read it when first published.

> "Whereas, some lumber manufacturers brand their lumber with their individual brand, which practice we disapprove, because of the fact that consumers are thereby confused and misled as to grade values.
>
> "Therefore, the National Retail Lumber Dealers' Association suggests and recommends to this Second American Lumber Congress at Chicago, April 20 to 22, 1920, and this in the public interest as well as in the interest of more orderly methods of distribution, that if the branding of lumber is deemed advisable, it be done through the medium of association branding rather than individual branding."

So far as I am informed the congress took no formal action in this matter. Neither do I know that it came up for discussion. I don't imagine anything will be done about it unless perhaps it is brought up again at the next meeting of the congress, and I wouldn't gamble that it will then, for perhaps by that time other manufacturers will have adopted the practice of branding, and it is not likely, therefore, that the disapproval of the retailers' association will be seriously considered.

This matter is somewhat similar to the action of the shingle makers on the coast, in changing their methods of packing. The majority of them have favored the change and have put it into effect. It is a question, however, favorable to the change, and also, whether their disapproval will have any effect to influence a return to the old system of packing. I am of the opinion that the new system is with us to stay and it is only a question of time and education when it will become universal so far as the coast shingles are concerned. The retailers must recognize the fact that the manufacturers are cooperating in their organizations as never before, just as the retailers are in theirs, and so long as they confine themselves to ethical practices in their relations with the retailers, we cannot reasonably expect much of anything else. So, in this matter of branding if it does not suit a dealer to handle branded lumber, he has the choice of handling other stock, for with the standardization of grades and sizes as recommended by the congress there will be little or no difference in what is branded and what is not.

Favor Association Branding

If branding is going to be done, I am inclined to favor the branding of the manufacturer's association, as in the case of the cypress association, and I think this eventually will be done, and the consumer will get the same benefit from this method as he will from private branding. I believe that lumber should be advertised on its merits as a building material and its grades and sizes guaranteed by single organizations representing the respective kinds of woods. But as this is not being done, and private brands and guarantees are taking its place, the retailer has no recourse but to live up in adjustment with what he can't help.

It is traditionary with lumber yard men to object to any kind of a mark, stamp, print, stain, whereby the grade of lumber is made known to the dickering customer, although probably the new generation is not so particular in this respect. In the "good old days" when we considered it legitimate to sort over our stock as we got it in, we didn't want anything of this kind to let the carpenters know what we were doing. When picking boards out of a No. 2 grade to put in the No. 1, we had to be careful that the figure "2" was not penciled on the piece. Some dealers handled nothing better in boards than a No. 2 common, and sold it for No. 1, and they had to do some explaining when a carpenter called their attention to there being many boards in it that had the grader's mark No. 2 on them. As before said, we didn't think it particularly wrong to take the privilege of making our own grades, and it was largely the fault of the manufacturers, who were careless about making their grades. The dealer who knew a board of a better grade when he saw it thought he had a right to put it on the pile where it belonged. When a customer paid for a No. 1 common he was not entitled to the D Select that came in the shipment.

But those days in the retail business are in the realm of reminiscence. Present day dealers don't do this sort of thing; they haven't the chance. If they had they probably would do the same thing, because they have the same human nature which never changes under all conditions.

I have not had any experience with private manufacturer's brands, but I doubt if there is any practical difference from the best that is unbranded. The psychology of the thing is what the dealer has to contend against.

New Position for Mr. Van Meter

L. Van Meter, Ottawa, Ont.

Mr. L. Van Meter, who for the past eight years has been a prominent member of the Canadian lumber industry and vice-president of the Dennis-Canadian Co., Whitney, Ont., is leaving that organization at the end of the present month to enter upon a responsible post in a manufacturing business at Cadillac, Mich., which is his old home town. During his residence in Ottawa and his activities in the Nipissing district, Mr. Van Meter has, by his quiet, earnest and gentlemanly qualities won a large circle of friends who wish him every success in the new duties upon which he is about to enter. He has been an enthusiastic member of the Canadian Lumbermen's Association and was always present at its gatherings.

In his younger days Mr. Van Meter spent several years in the logging camps of Michigan and then entered upon a journalistic career for a decade. He could not get over his first love for the open and the fragrance of the pine had so thoroughly impregnated his system that it was impossible to neglect the call any longer. He returned to lumbering, working in various departments of the industry. He gained a splendid insight as buyer and inspector, mill superintendent and manager, and nineteen years ago went with Dennis Bros. of Grand Rapids, Mich. He managed the mills of the A. L. Dennis Salt & Lumber Co. at Dighton, Mich., for eight years. When the Dennis-Canadian Co. was organized and the purchase of mills and limits at Whitney completed, Mr. Van Meter came to Canada and has since been manager of the business, which, under his able direction, has met with a large measure of success. The company cut from about 10,000,000 ft. to 15,000,000 ft. a year of Canadian hard and softwoods, and hauled a considerable portion of their logs to the plant by means of a logging railway some ten miles in length.

Brunette Sawmill Has Changed Hands

The Thurston & Flavelle interests at Port Moody, B. C., have purchased the Brunette sawmills at Sapperton, B. C., at a cost approximating $1,000,000. A new company is being formed which will be known as "Brunette Sawmills, Limited." Mr. L. A. Lewis, who has been general manager of the plant for many years, will retain an interest in the new concern and will, probably, remain as general manager. The deal involves a transfer of some $400,000 in cash. The Brunette plant is one of the oldest in British Columbia, and in machinery and equipment, has kept abreast of the times.

The new owners first became active in Coast lumber circles some six years ago, when they secured control of the J. S. Emerson plant at Port Moody. Mr. Thurston and Mr. Flavelle are both from the East, the latter being a nephew of Sir Joseph Flavelle, former head of the Imperial Munitions Board in Canada.

Telkwa, another new settlement on the G. T. P. in the Skeena valley, which is taking on increased activity with the coming of many settlers for the land, has two saw mills now in operation also a planing mill and woodworking factory. So many new settlers have arrived in the district that many are compelled to live in tents until they can get lumber for erecting houses.

It is the business of advertising to sell goods. The advertiser must deliver them.

Canada Must Conserve Her Wood Resources

Anyone Who Advocates Shipment of Raw Product Out of the Country is Neither Consistent nor True Canadian – Perpetuity of the Crop

By Frank J. D. Barnjum, Annapolis Royal, N.S.

These so-called high prices for pulpwood and paper are here to stay, with a continual upward trend, but as a matter of fact the price for wood and paper is not high as compared with other commodities and especially based on cost of reproduction. A crop that takes seventy-five years to mature and to which, in addition to the use of the land and the long wait for returns, must be added the cost of planting the seedlings, protection from fire and insects, taxes and interest, together with the losses continually occurring in the forest from disease, wind and fire, must of necessity cost high.

Take a cord of wood to-day, even at $40.00 f. o. b. cars at shipping point, and deduct the charge for cutting, peeling, hauling and loading, say $12.00, this would leave $28.00 for growing a cord of wood or a matter of less than 38 cents per cord per year for gross receipts from which it would be safe to deduct at least one-half for costs and wastage above enumerated, showing only 19 cents per year per cord, which certainly, to say the least, could not be classed as "profiteering" by the individual or corporation who undertakes to reproduce the trees which are now being cut. This is so unattractive to the individual that this, the most important work confronting the continent to-day, must be assumed by governments, communities and the large paper companies.

Everyone, from one end of Canada to the other, is now advocating reforestation, and it is certainly the crying need of the hour, but why plant tiny seedlings while a continual stream of mature trees are allowed to be shipped out of the country in the shape of more than a million cords of pulpwood per year and at a loss to Canada of more than seventy-five million dollars annually, if simply turned into ground wood only.

Any many who advocate and still approve or even countenance the shipment of raw wood out of the country is neither consistent nor a true Canadian. All this hue and cry and flourishing of the "Big Stick" for the removal of the restrictions on Crown land wood is simply made in the vain hope that it may prevent the placing of an embargo by Canada on fee land wood as well, and not with any expectation that the present regulations will be in any way changed. American paper manufacturers have frequently expressed surprise to me that Canada has not restricted the shipment of fee land wood long before now and it is the one thing they are all expecting from day to day.

If the boot were on the other foot and wood was being shipped from the United States to Canada, how long would it be allowed to continue? While, as a matter of fact, from an economic standpoint, that is just what should be occurring at the present time, as peeled wood is selling in Maine at from $15.00 to $18.00 f. o. b. cars while the same is being sold in Quebec for $25.00 with the asking price running up as high as $40.00 per cord f. o. b.

All these government investigations and attempts to regulate the price of newsprint paper are simply like trying to sweep Niagara Falls back with a broom! The more investigation and regulation, the higher the price goes. They are working at the wrong end of the problem. Germany, the most highly organized country in the world, tried price regulation during the war and abandoned it as a miserable failure.

Don't try to hold the price down—let it advance as far as the law of supply and demand will allow. The best remedy for newsprint shortage is high prices. Nothing will stimulate production like high prices for pulp and paper, and nothing will so well keep down consumption and prevent waste. Let prices advance to a point where the mills can go out into the remote sections for wood, even up to a cost of $50.00 to $60.00 per cord or even more.

High prices for paper are bound to curtail waste—this applies not only to the print paper but the newspaper as well. With high prices the paper companies can afford to spend more money on their woodlands for fire protection and reforestation which, for the future, will be quite a burden, as six trees at least must be planted for every one cut down, as only one tree out of six ever reaches maturity; in fact, the mortality is greater even than this.

The remedy, therefore, for the newspaper publisher is a five or ten per cent. paper which is bound to come in any event in the very near future. The newspaper will even then be one of the cheapest articles obtainable to-day.

The pulp and paper business is on an entirely new basis and it has come to stay, so we might as well acknowledge the fact, face the issue and prepare for the future.

Some of the statements made at the recent Underwood hearing at Washington are so ridiculous that they are hardly worth a passing notice. If there is a four per cent. growth, as intimated at the hearing, and there is the amount of standing timber claimed, there would be more standing wood to-day than there was a hundred years ago. In fact, the trees would be crowding us off the earth. Just think of an annual growth of 24 million cords in Quebec against a cut of only 3 million cords, or a net gain of 21 million cords per year in one province. The same would be applicable to the State of Maine, only in a greater degree, as the growth is much more rapid there than in Quebec. As a matter of fact, there is no net annual growth in our forests as they exist to-day. The wastage and destruction by wind, fire, insects, fungi and waste in logging are so enormous that they more than offset the growth. Any man of ordinary intelligence must acknowledge that all of the above causes of destruction combined must of necessity amount to more than the 20 per cent. growth claimed by some.

A paper company must be in desperate straits indeed when it would permit such ridiculously misleading figures to be presented to a committee composed of Senators of the United States in the vain endeavor to obtain an increased wood supply through a release of Canadian Crown land restrictions. These statements are an insult to the intelligence of the Senators and will no doubt result in a well merited rebuke from the committee.

Reference was made at the above hearing to a single quotation from a speech delivered at the recent annual meeting of the Canadian Pulp & Paper Association by Sir Lomer Gouin in which the Prime Minister stated that under proper management four or five times the present cut might be made. But this remark was applicable to what might happen in the distant future under a well-regulated forest. Every one knows there is no such thing on this continent to-day, and it will take from 50 to 75 years to produce one.

Any further quotations from the speech of Sir Lomer Gouin were carefully omitted and I will merely repeat the following:

> "Our Province, Mr. President, as you were kind enough to say a few moments ago, was the first to realize the importance of keeping in our province our raw material for the use of our own mills. We do not intend to relax that policy at all. We may have to go further, and the time may come when we will have to limit the cutting of our Quebec forests for the exclusive use of the Quebec mills, and if the situation demands it, we shall not hesitate, sir, to take the necessary measures, because we cannot forget that "Charity begins at home."
>
> . . . . . .
>
> "But this is not enough. I do not think it is sufficient for you to reduce the volume of your cutting. The time is come, we are told, for you to think that you should restock your timber lands."
>
> . . . . . .

I would suggest in this connection that there is still probably rising a million acres of land that this paper company can buy in the State of Maine at or around $20.00 per acre—land that will average 4 cords or more per acre, or $5.00 per cord stumpage, and $5.00 stumpage with ground wood selling at $100.00 per ton is just as low as $1.00 stumpage was when pulp was only bringing $20.00. This would make cheaper wood for these American mills than wood shipped from Canada.

May Adopt New Method of Scaling

G. C. Hurdman, ex-M.P.P., Ottawa, and now of the Department of Lands and Forests, visited Sudbury recently in connection with the recently-adopted scheme of the department to have test scales made of the logs going into the various sawmills throughout the districts, as well as measurements of the cut lumber. The plans call for each mill to be visited for a week two or three times each season. This move is not in connection with the timber probe which was recently held in Ontario, but is simply part of the system adopted by the Department of Lands and Forests.

Personal Paragraphs of Interest

R. G. Chesbro, of Toronto, and Mrs. Chesbro have returned from a motor trip to St. Louis, Mo.

Frank J. D. Barnjum, of Annapolis Royal, N. S., was a recent visitor to Montreal.

Hugh Munro, lumberman, of Toronto, is enjoying a few days' holidays in Lake of Bays district.

H. G. McDermid, of the Union Lumber Co., Toronto, and Mrs. McDermid, are holidaying at the Lake of Bays.

D. A. Webster, wholesale lumberman, Boston, Mass., was in Toronto recently calling upon the members of the trade.

J. M. Allen, of the Allen-Stoltze Lumber Co., Vancouver, is spending a few days in Toronto and other cities on business.

N. L. MacDonald, of the MacDonald Lumber Co., Toronto, is holidaying in Nova Scotia and other eastern points.

A. E. Eckardt, of the R. Laidlaw Lumber Co., Toronto, and Mrs. family, are spending a holiday at the "Royal Muskoka," Lake Rosseau.

S. G. Denman, of Montreal, of the Imported Timber Section of the Board of Trade, England, has been on a visit to Halifax in connection with the stock of British Government lumber there.

J. D. McCormack, head of the Canadian Western Lumber Co., Fraser Mills, B. C., spent a few days in Toronto recently on business and called upon a number of friends in the trade.

W. F. V. Atkinson, who for several years was head of the forestry and hydraulic departments of Spanish River Pulp & Paper Mills with headquarters at Sault Ste. Marie, Ont., has removed to Toronto and taken up his residence for the present at 186 Warren Road.

George A. Grafftey, son of W. K. Grafftey, president of the Montreal Lumber Company, has opened an office at Room 41, 212 McGill Street, Montreal. as a dealer in wholesale lumber. Mr. Grafftey is a selling agent in Canada for the Wapske Lumber Company, and also for some New Brunswick mills.

Guy Tombs, of the Canadian Export Paper Company, Montreal, left lately for Vancouver. He expects to remain on the Pacific Coast for a month with his family, and while there may visit the various large pulp and paper plants which have been established in British Columbia in the last few years.

Z. Mageau, M.P.P., Sturgeon Falls, Ont., and Mrs. Mageau have gone on a trip to Great Britain and the Continent. They will be absent about three months during which time they will motor over the war area of Europe and visit Palestine. Mr. Mageau is head of the Mageau Lumber Co., of Field, Ont.

Word has been received of the death of Hugh Stewart, formerly with the C. G. Anderson Lumber Co., who left Toronto some months ago to take a position with a leading New York wholesale lumber concern as purchaser of mahogany in the Philippine Islands. Mr. Stewart, during his year and a half residence in Toronto, made many friends in the industry who will regret to learn of his demise.

Ex-Reeve J. R. Davidson, of Beachburg, Ont., passed away as the result of a terrible accident in a saw mill there recently. In some unaccountable manner he was thrown on a revolving saw and one of his legs was completely severed and the other was badly mangled. Fellow workmen rendered first aid as quickly as possible and he was hurried to the Pembroke hospital but medical aid was unable to overcome the shock. He was aged 69 years and a prominent resident.

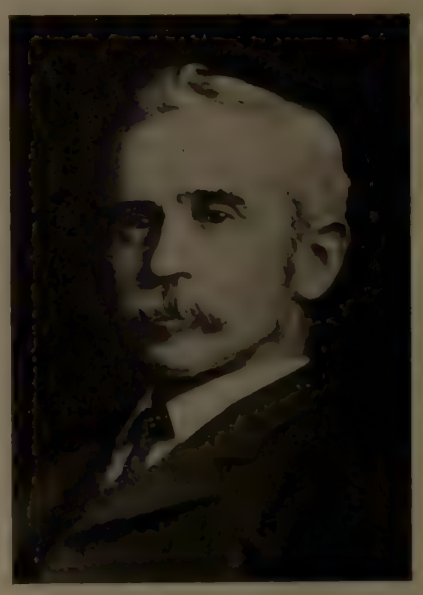
M. A. Grainger, Chief Forester of British Columbia, accompanied by William Turnbull, timber commissioner for the same province, visited Grand Mere as guests of the forestry department of the Laurentide Company, en route to London, to attend the Imperial Timber Conference. Both gentlemen were enthusiastic over the reforestation work and experimental work carried on for the company, and stated that they believed more real substantial forestry work was being done there than by any government or private concern in the Dominion.

Headed by John W. Enoch, poet laureate of the Cleveland lumber trade, and George T. Barner, of the Barner-Meade Lumber Co., nine Cleveland lumbermen took time recently from their business to make a trip across Lake Erie to Port Stanley, Ont. The leaders of this party had sent out invitations to thirty of their lumbermen friends. but there were only nine at the dock when the steamship left for the Canadian port. That all of those who made the trip had an enjoyable time is certain, for they have been telling their friends of the excursion and there is no doubt but that when another party is organized there will be a larger attendance.

R. V. McCabe, who for several years has been the popular office manager of the Dominion Pulp Co., at Chatham, N. B., is starting in business for himself in the pulpwood line, and has formed a partnership with John W. Bowes, of Blissfield, N. B. Mr. McCabe, who recently resigned his position with the Dominion Pulp Co., is a thoroughly experienced and practical man, and his many friends wish him every success in his new venture. McCabe & Bowes have opened an office in Chatham, N. B.

Robt. Arthur Hurdman, of Ottawa, for many years associated with the well-known lumber firm of that name and since the commencement of the war prominent for his participation in the work of the Canadian Patriotic Association, died in Ottawa recently. He was in his fiftieth year.

A Veteran Montreal Lumberman



W. K. Grafftey, Montreal

Mr. W. K. Grafftey is the new president and managing director of the Montreal Lumber Co., Ltd. He has had 44 years' experience in the lumber business, commencing in the year 1876 with the late Mr. G. A. Grier, with whom he remained for 20 years. In 18906, the company of which he is now president, was formed by Ottawa and Montreal men, and from small beginnings the business has expanded until it now handles annually about 25 million feet of spruce and pine, besides a large quantity of hardwoods. Their Montreal yards are at Basin 4, Lachine Canal, where spruce is principally brought in by water transportation, while the main offices and yard for the better qualities of pine are situated at 759 Notre Dame Street W.

Mr. Grafftey was president of the Montreal Lumber Association for two years, and represented the lumber interests on the council of the Montreal Board of Trade for the same period. He also served the city of Westmount for ten consecutive years as chairman of the Light & Power Dept., which duty he performed with great success.

As a subsidiary company for the supplying of material for ships, the Montreal Lumber Company operate the Steamship Supply Lumber Company, using large quantities of spruce. During the war this section grew to very large proportions. The present officers of the company are: Mr. W. K. Grafftey, president and managing director; Mr. George Dewar, of Ottawa, an expert in the pine business, vice-president; Mr. Stewart Grafftey, director; and Mr. H. Brown, secretary-treasurer. At the age of 72 Mr. Gafftrey is hale and hearty and his many friends wish him many years of health and prosperity.

Whalen Company is Steadily Expanding

The annual report of the Whalen Pulp & Paper Company, Limited, of Vancouver, of which Sir George Bury is the head, and which operates several large plants in British Columbia, shows greatly improved earnings for the last twelve months. The stock is at present in the unlisted department of the stock exchanges, but there have been several raises in values of late. All the plants of the company are busy and a large trade is being developed with Japan and other countries. The pulp production of the company will be 72,000 tons annually from now on. During the past year the output was about 48,000 tons, a large part of which was marketed in the Orient. Gross profits for the year's operations amount to $1,050,000 compared with the $900,000 estimated at the time of public issue of the company's 6 per cent. first mortgage bonds last July. Deducting administration and general expenses of $173,000 the amount available for interest, taxes and depreciation was about $877,000, compared with $497,000 for the year ending February 28, 1919. After deduction of bank interest, the amount available for bonds and debentures was about two and one-half times their interest charges. Surplus for the year totalled $323,000, adding to this the amount of $32,000 brought forward at the end of the previous fiscal year balance to the credit of profit and loss stands at about $355,000. In the matter of working capital, net current assets have increased by $1,600,000. Construction work to the extent of about $700,000 was completed at the company's various plants.

How about that clean up, paint up drive? Have you started it in your town?

Besides, lumber is today more valuable than dollars. Don't be careless with it.

National Hardwood Inspectors in Canada

John E. Banks, Toronto, chief inspector of the National Hardwood Lumber Dealers' Association in Ontario, is well-known in the lumber arena. He has been connected with the lumber business for the past ten years and was formerly employed by G. Elias & Brother, Inc., of Buffalo, N.Y., and later by the Hugh McLean Lumber Co. of the same city. Mr. Banks has been identified with the inspection staff of the National Hardwood Lumber Dealers' Association for the

John E. Banks, Toronto

Arthur G. Bowler, Montreal

past year and a half, being first stationed in the Buffalo market and shortly after being transferred to Toronto, of which market he has now charge.

His associate, H. F. Holton, is an Ontario boy. being born in the province in 1879 and has geen engaged in the lumber line practically all his life. Previous to linking up with the National Hardwood Lumber Dealers Association he was on the staff of Hart & McDonagh, wholesale lumbermen, Toronto, for four years.

Arthur G. Bowler, who is in charge of the Quebec District, with headquarters in Montreal, became a National Deputy Inspector in December last. Mr. Bowler was born in 1891 and commenced his connection with the lumber business in 1907 as yard inspector for Parker & Page Co. at East Cambridge, Mass. In 1914 he left that firm to take charge of the yard of the New England Lumber Co. at Charlestown, Mass. He was in the service of the U. S. government as an inspector of propeller wood for a year during the war.

Shall I Build This Year?

This is a question that almost every farmer is asking himself today. He may substitute the word "remodel" for the word "build" but consider the question in one way or another he must.

A recent issue of the Ottawa Farm Journal summed up the situation very clearly. This paper is known all over Canada and is an ably-edited journal with an accurate understanding of the farmers' problems. The full article is rather long to republish here, but the concluding portion of it covers the situation so well that we repeat it.

"But as conditions stand to-day, is the farmer likely to gain anything by waiting if he has building to do? The Ottawa Farm Journal, viewing the matter from every standpoint, firmly believes that to put off doing the work now, simply means heavier expense later on. Here is the reason. The present labor unrest is world-wide and it has not by any means reached its zenith. The sooner the farmer realizes this, the better it will be for himself, and the sooner he prepares to meet the situation and deal with it, the easier will it be handled. Good buildings, modernly equipped with labor-saving equipment, is one way to meet labor emergencies. The farmer with barns and stables handily arranged, and supplied with those things which mechanical invention has provided, can snap his fingers at labor during the greater part of the year. In other words, he can to a very great extent do his own work, except during the rush seasons of spring and summer.

"Another reason for going ahead with building now is that lumber is likely to be dearer for several years to come. Of course, we have lots of timber in this country yet, but it is costing more than it formerly did to get it ready for market, which, coupled up with the foreign demand, has created a situation almost unique. And this demand from abroad for our lumber is bound to continue throughout the period of reconstruction with prices going up from time to time, until the needs of Europe have been supplied.

"Still another reason for suggesting that the farmer should construct now, if in need of improved buildings, is that the tendency of the age is for a higher standard of efficiency in the production of milk and its products. The consumer to-day is demanding cleaner, purer milk and the factory the same. The successful farmer must be prepared to meet this demand or else take less money for his product. Better stables will enable him to do it.

Sized up then, the situation would seem to be that the farmer can build more cheaply in 1920 than for some years to come, and that to do so now puts him in a position of being more independent in the matter of labor, and better able to produce what the market demands."

Price Bros. Erecting Several Sawmills

Price Bros. & Co., of Quebec, are extending their operations in several directions and have built a new mill at Matane, equipped with Waterous machinery, consisting of one double cut and one single cut band mill, two horizontal band resaws and two "Champion" Waterous edgers with trimmers. At Metis the Price Company have erected a new mill equipped also with Waterous machinery, consisting of one double cut band mill, one band resaw and two "Champion" edgers, with necessary trimmers, etc.

Extensive improvements have been carried out at Rimouski and that plant now possesses a double cut band mill and a single cut band mill, two horizontal band resaws, two edgers and one double edger with necessary trimmers, the installations all being supplied by the Waterous Company.

Price Bros. have just completed their new mill at St. Juste and although it is not a large plant, it is a very busy one and is fitted with one large carriage for circular saw, two circular resaws and two edgers with trimmers. At Matane, Metis, Rimouski, and St. Juste lath departments have been put in operation for using up all slabs.

Dyehouse and Bleachery Ventilation

The Buffalo Forge Co., Buffalo, N. Y., have issued a recent bulletin No. 721, entitled "Buffalo Dyehouse & Bleachery Ventilation." The new booklet is dedicted to all dyehouse and bleachery owners, and operators of the firm state that their egnineers, after exhaustive study and experimentation, have solved the problem of successful dyehouse and bleachery ventilation, and are now making this information available to all interested. One of the aims of the Buffalo Forge Co. is to help operators keep their dyehouses and bleacheries free from steam and roof condensation. The publication is splendidly illustrated and describes the dyehouse apparatus, with pictures of actual installations, which are both interesting and edifying.

The Timber Regulations of Ontario

The timber resources of Ontario seem always to have been in the hands of politicians and never in those of a statesman, says the Toronto "Star."

When a lumberman, at his own expense, sends a timber cruiser into the wilderness to find, in some remote place, a timber tract that nobody knew anything about, he seems to regard the "find" as one that really ought to be his own, for which he ought only to pay enough to make his title good, and should not be embarrassed by regulations that cost him either money or trouble. The timber is of no use unless cut; it stands there through the years unseen of man; he is willing to employ labor and cut it, extend the range of human enterprise, meet and surmount the difficulties in the way of getting the logs out—he is willing to face all the hazards, take all the risks and make what profits he can. Or, maybe, if he is shrewd about it, he can sell his rights for a neat sum, but if he does, is it not because he knows his business and knows where to go in search of a customer?

It is not unnatural, perhaps, that men in the timber trade should look upon the forests as theirs and feel that rank outsiders should not spoil their business by making them compete with each other at auction for every tract of timber that any one among them may deside to possess; and it is natural enough, perhaps, that these men should regard fees, regulations and restrictions as merely being concessions which politicians feel called upon to make to public opinion—restraints which they resent and are justified in evading if they can.

All this may be natural enough, but the serious fact of it is that this attitude of mind appears to have manifested itself itself pretty much all along among the politicians and officials who have for a generation or two had charge of the public domain. The regulations are evidently meant to sound well enough to please the public ear, but not to be put into effect in such a way as to inconvenience anybody in particular. The airing which Crown lands affairs are now receiving, with the new United Farmers of Ontario labor government looking on, will probably lead to important changes.

Toronto Firm Erect New Planing Mill

The Sheppard & Gill Lumber Company, Toronto, Ont., have just completed the construction and installation of an up-to-date planing mill and equipment. This firm, which is composed of L. B. Sheppard, H. L. Sheppard and E. I. Gill, purchased the lumber yard formerly conducted by O. & W. R. Smith and have added the planing mill to enable them to handle the large volume of building material required in their section of the rapidly growing Danforth district.

The mill is a two-storey frame building, 48 x 54. The lower storey where the heavy machines are located, has a smooth concrete

Yates band resaw in Sheppard & Gill planing mill

floor. The upper storey is used chiefly for storing sash and doors, which are stocked in large quantities. One corner of this floor is fitted with a couple of work benches and a C. M. C. No. 317 variety saw, and is used for odd jobs.

The equipment on the mill floor consists of modern production planing mill machinery, the sash and doors brought in by the carload, and includes the following items: Yates C 3 moulder, Yates A 4 fast feed moulder and matcher, C.M.C. self-feed rip saw, Yates 4 in. band resaw and a Yates No. 137 emery stand. These machines are all new and of the latest design.

Electric power is used, with an individual drive for each ma-

Fast feed moulder and matcher, Yates A4, in Toronto plant

chine. Two shavings exhaust systems are employed, one to collect the sawdust and the other to carry away the shavings from the stickers. Separate storage vaults are provided for each material. The layout of the machinery is such that a large volume of work may be handled. The machines are placed crosswise of the building so that stock may be fed in one side and carried away through doors on the other side. The latest style profile heads with milled cutters are used and everything provided for the efficient handling of all the work that offers.

Timber Limit Brings Quarter Million

One of the biggest timber deals that has been put through in Algoma in many years has been completed, whereby the timber area of the Rankin location, comprising 6,400 acres, has been purchased by Jerry Lynch, of Sault Ste. Marie, Michigan, the purchase price being in the neighborhood of $250,000.

The Rankin location adjoins the Canadian Soo, and for a great many years has been held by United States speculators for a profitable sale. Last summer the forest fires which swept the north country levelled a great number of the big trees, and it became absolutely necessary for the owners to realize on the timber as soon as possible. Timber cruisers were sent out over the area last fall and the timber was placed on the market.

It is understood that the purchaser has five years in which to clear the timber off, then the probability is that the land will be opened up for farm purposes.

New Bankruptcy Act is Now Law

The Bankruptcy Act, passed at the first session of parliament at Ottawa in 1919, came into force on the 1st of July, under the provision of a proclamation issued in January last. Some amendments, which consideration of the Act during the last year showed to be necessary, were made at the session just prorogued. The rules, which contain very important provisions respecting the carrying out of the Act, have recently been passed by the Governor-General-in-Council.

These rules were first printed in draft form and circulated amongst the judges, members of the legal profession and chartered accountants throughout Canada. They were carefully considered by Mr. Justice Middleton, of the Ontario Bench, and Mr. Justice Maclennan, of the Montreal Bench, and also by representatives of several bar associations. The act, amendment and rules are now in the hands of the distribution branch of the Printing Bureau, and may be obtained upon application.

The first list of authorized trustees is not complete, but is made for the purpose of having trustees in all Provinces, so that the provisions of the Act may be carried out. It is likely that supplementary lists will be considered by Council and approved at an early date. Authorized trustees are required to file a bond in $15,000 issued by an approved surety company. It is intended that the appointment of trustees shall not be complete until the bond has been filed.

Creosote Oils in Wood Preservation

Light creosote oils properly injected into wood apparently will prevent decay until the wood wears out or until it checks so badly that the untreated portions are exposed. Such is the indication of service records collected by the Forest Products Laboratory on railway ties and telegraph poles preserved with low boiling creosotes.

Creosotes used in ties from 25 to 50 years ago were for the most part oils having 50 per cent. or more distilling below 235° C., with a residue not to exceed 25 per cent. at 315° C. The ties so treated lasted from 15 to 20 years, and failure was traceable, in most cases, to mechanical wear, such as rail cutting and spike killing. In no case was failure found to be the fault of the preservative.

Of 1558 telegraph poles in the Montgomery-New Orleans line, which were pressure-treated with a light creosote oil, 1049 poles were still sound after 16 years. In 91 per cent. of the cases of decay, the fungi had entered the wood through checks and shakes. Representative sections in the Norfolk-Washington line showed that after 17 years service, of the 1614 poles inspected, 1469 were sound, 92 decayed at the top, and 105 decayed at the ground line. The decay at the top was caused chiefly by cutting off the poles. In those decayed at the ground line, the causes of failure, as determined in 88 per cent. of the cases, were checks or shakes. Here again, as in the ties, the preservative outlasted the mechanical life of the wood.

Unless some other factor than protection from decay is considered important, therefore, there is apparently no need to specify high boiling oils. The important point is that any coal tar creosote which is not extremely low boiling or extremely high boiling, will satisfactorily prevent decay, and in the selection of an oil, factors such as price, penetrability, and convenience in handling should receive greater consideration than moderate differences in volatility.

Faced with a steady shortage in the number of skilled employees available in the lumber industry, both for mill work and in the woods, it is a matter of wonder that the lumbermen have not undertaken the training under some regular system of additional men for the places that are sure to be vacant. Even the farmer, without meaning invidious by the expression, has long taken up the systematic training of experts in all branches of the agricultural industry. The public schools of the country spend thousands in manual training, most of the course being in wood-working.

Would Open Up Fine Timber Resources

Urging the extension of the Temiskaming and Northern Ontario railway north from its present terminus at Cochrane, a correspondent from New Ontario says: The people of New Ontario want the present railway extended, eventually to James Bay, but immediately to Kettle Falls. Public opinion in that country would be satisfied with the completion of the first link of from twenty-five to forty miles during the present year. The immense timber, power and pulp resources in this region are alrady known, so there should be little risk in the venture thus far. In the case of the forest wealth there is always the danger of fire, which may make any delay in harvesting this product disastrous. More thorough investigation of the country farther on could be made before proceeding with the final linking up of James Bay with the rest of Ontario.

Canada Has Well Staged Exhibit

Prince Arthur of Connaught opened the Empire Timber Exhibition at Kensington, Eng., promoted by the Government Department of Overseas Trade with the object of bringing into more universal use the timber grown in the Empire.

The promoters give a special word of praise to Canadian Forestry Laboratories at Montreal. Canada has a fairly extensive and well staged exhibit, and a few Canadian firms have individual displays.

The exhibition is of a purely technical character, intended to attract traders. The official catalogue, which contains a list of shippers, importers, etc., will doubtless prove useful to specialists in the timber industry.

New Members of Hardwood Association

Anderson, Shreiner & Mawson of Toronto, and Chas. T. White & Son, Limited, of Sussex. N.B., have recently become members of the National Hardwood Lumber Association. The official Bulletin, which was recently issued by the Association, states that the Twenty-third Annual Meeting surpassed all its predecessors and exceeded all expectations, being a cost successful climax to a most prosperous year. The attendance, as shown by the official registration, was 1168, and this represented every foot of the hardwood field from Calgary to New Brunswick and from Maine to Florida. The executive work of the convention was transacted with despatch and thoroughness, and the proposed changes in the inspetcion rules of the Association were rejected as a whole.

Unique Use for Even Knot Hole

That a use has been found for the knot hole, which is regarded generally by lumbermen as about as much value as the squeal of the hog, is vouched for. Chicago packing houses are said to use all of the hog but the squeal but a Yankee going this one better, is said to have found a use for the knot hole. Taking a piece of board one inch thick which has been cut off in some factory because of the knot hole which the piece contains, the Yankee squares the pieces with the knot hole centered, sets it upon a ½-inch wooden base, glues the two together, smooths the surface of the piece and gives it a bath of varnish. Behold, the piece is a wooden novelty suitable for the desk as a receptacle for paper clips, fasteners, pins, or the like!

New Company Taking Over Big Interests

Twelve hundred square miles of pulp lands, situated in Newfoundland, and held under option by S. Duncan McLean, of Sydney, are likely to be taken over by an American syndicate in the near future. The tract which is valued at $500,000 will be cruised by surveyors sent to Newfoundland by the American interests, within the next few days. The syndicate has been formed in the United States to take over this property and work it, providing the report of the surveyors is a favorable one, which competent lumbermen assert is practically a foregone conclusion.

The timberland is owned by Canadian and Newfoundland interests and is practically a virgin area. It is readily accessible for cutting. If the surveyors return a favorable report on the proposition, operation will be commenced as soon as possible. Mr. McLean has held the option now for several weeks. Finally his endeavor to interest a corporation has met with success.

Mr. C. G. Walsh, who is now at North Sydney, is the man that has made arrangements with Mr. McLean for the survey and general cruise of the property. Mr. Walsh is acting in behalf of American pulp and paper interests. While he makes no definite statement it is surmised that one of the large American dailies is behind him. The papers of the Southern nation will go to any length to secure an adequate suspply of newsprint, as a general shortage has occurred in the American pulp industry.

Survey of Sawmiils in Fraser Valley

Evidence of the important part lumbering and its allied activities pay in the affairs of B. C. is afforded by the many camps and mills throughout the Fraser Valley. Old timber lands are being worked over again, and the world-wide demand for lumber and forest products which characterized the war period, and which still prevails. is reflected in the volume of business being done in these lines.

A typical mill is that of the Campbell River Lumber Company near White Rock. The concern operates several camps to secure its own logs, and has lately increased its capacity fifty per cent. to 150,000 feet daily. The power is electrical with the exception of the headsaw equipment. The company is providing cottage homes for its married employees.

Another large mill recently remodelled and equipped with the very latest machinery, electrically driven, is the Hammond Cedar Company's big plant at Hammond. This company also is helping to solve the housing problem for its employees.

The Dominion Shingle and Cedar Company, Ltd., has replaced the big plant on Lulu Island near Eburne, burned down last September, with a mill equal to the best in the province, and operates 14 machines at Eburne and ten at other centres in the Fraser Valley. The Abbotsford Lumber Co. has an output of 90,000 feet daily, and specializes in large timbers for the rail trade. This concern employs 230 men.

The Beaver River Lumber Co., with a nominal capacity of 70,000 feet per day, tops the 74,000 mark some days at its mill alongside the B. C. E. Railway some 30 miles northeast of New Westminster, and with a subsidiary concern at Sullivan employs over 100 men. Other concerns swelling the output include the Popcum Co., ten miles east of Chilliwack; the Vedder Crossing Co., west of Vedder Mountain; the Promontory Sawmills, Sardis; Clayton Co., nine miles east of New Westminster; McLean and McKay Co., two miles south of Cloverdale; which is opening up a new stand of 3,000,000 feet near the mill; Galbraith and Sons' Lincoln mill, with four miles of logging railway; Wolverine Co., two miles south of Lincoln station; Craig-Taylor Co., near Otter station, with a capacity of 60,000 feet daily; Anthony A. Rerrie Co., two miles north of Aldergrove; the G. B. King Co., operating at King station, which under the new name of the King-Farris Co., has lately acquired 125,000.000 feet of spruce and fir, including the magnificent tract known as the Big Green Timber near Cloverdale; the Lombard Co., at Langford on the B. C. E. R., and a host of smaller outfits and shingle mills scattered throughout the Valley.

Paper Company is Reorganizing

The Belgo Paper Co., Limited, is reported to represent the reorganization of the well-known Belgo-Canadian Pulp & Paper Co. of Montreal, who were one of the best-known pulp and paper concerns in the province of Quebec. The new company is capitalized at $20,000,000, with headquarters in Montreal, and is a Canadian incorporation. The older company was a Belgian concern with a capitalization of $5,600,000, and a bond issue of $2,500,000. It is not known whether this reorganization means that additional Canadian capital has been taken in or whether as heretofore the Belgian interests will be in control. The company holds a number of excellent timber limits in the St. Maurice district.

How Timber Policy Will Be Improved

In connection with the investigation into the timber industry in Ontario and the conditions surrounding it which has been going on for some time, some practical suggestions have been made to the Commission with respect to the plans which may be pursued in the future. It has been suggested that timber licenses should be for a substantial period during which the lumberman might reasonably and profitably take off the estimated amount of pine or other wood, and that instead of charging "a more or less" nominal sum in the form of Crown dues, these be increased to perhaps $5 a thousand for white pine and corresponding rates for red pine and other woods, also that the limits be sold either by public auction or tender to the highest bidder as under the former system.

It was the idea of Mr. White that this would be in the best interest of all concerned, would stimulate the interest of the Government and lumbermen from a standpoint of fire protection, and would tend to prevent wastefulness in cutting operations and also prevent the sacrifice of immature timber on the part of the licensees.

Even the Bolsheviks are using modern efficient mechanical equipment in drying high grade veneers. At least a Proctor Automatic Veneer Dryer is in the factory of A. M. Luther of Reval, Russia. This concern, one of the largest European manufacturers of veneers, writes: "The factory is in the hands of the Bolsheviks."

All Aboard for the North Bay Trip

Annual Outing of Ontario Retail Lumber Dealers will be Held July 30-Aug. 2—Big Attendance Promised

Details are now about complete for the annual trip of the Ontario Retail Lumber Dealers' Association, which will be held to North Bay and Lake Nipissing, July 30th to August 2nd. The itinerary of the party was published on page 53 of the July 1st edition of the "Canada Lumberman" and practically remains unchanged.

From reports received by Secretary Boultbee, Toronto, there will be an unusually large and representative attendance from all parts of the province. A number are coming from as far east as Ottawa, as far west as Windsor and as far north as the Soo and Fort William. Every arrangement has been effected for the entertainment and instruction of the visitors and the outing may be well termed an "educational" one. Those from the central and western portions of the province will assemble in Toronto on the afternoon of Thursday, July 29th, and leave by the evening train for North

A. J. Young, North Bay, Ont.
Who is a live worker for success of retail lumbermen's outing

Bay, where they will arrive on the morning of July 30th. After breakfast at the Pacific Hotel, the party will depart by motor for Callander to visit the mills of J. B. Smith & Sons and A. B. Gordon & Co. The members will be provided with a lunch at Callander and in the afternoon will wend their way back tto North Bay and inspect the plant of Wm. Milne & Sons at Trout Mills. This will be followed by a fishing expedition on Trout Lake.

On Saturday morning, July 31st, the lumber merchants will leave by train for Cache Bay to make a tour of the extensive sawmills of George Gordon & Co. and afterwards will journey to Sturgeon Falls to see the splendid pulp and paper mills of the Spanish River Co. There they will be entertained to a lunch, and at 2 p.m. in the afternoon will enjoy a sail on the "Northern Belle" across Lake Nipissing to the French River and Chaudiere Falls, where they will remain overnight and also on Sunday, August 1st.

On Monday, August 2nd, which is Toronto's Civic Holiday as well as the Civic Holiday of a large majority of the towns and cities in Ontario, the party will return to North Bay where arrangements have been made for motoring, sightseeing and fishing. It is expected that some interesting angling competitions will be engaged in and great success met with by the experts.

John B. Reid, president of the association, states that this will be the best trip ever and that any retail lumberman, who fails to attend, "will miss half his life." All yardmen, whether members of the association or not, are cordially invited to come along and take part in the annual outing. A few days' holiday will benefit any man in the business, widen his horizon, increase his acquaintanceship, broaden his ideas and afford a pleasant nd restful change from the ordinary duties and routine.

Each annual outing has always been better than the preceding one and the jaunt to North Bay and Lake Nipissing on July 30th to August 2nd promises to eclipse any previous pilgrimage. Last year seventy retail lumbermen took in the excursion to Penetang, Midland, Victoria Harbor and up the Georgian Bay, and from present indications it would appear that over one hundred representative dealers will make it a point to participate in the proceedings at North Bay and vicinity. The town promises to extend the visitors a warm welcome.

One of the most enthusiastic boosters of the North Bay trip is A. J. Young, of the Young Lumber Co., North Bay and Toronto. Mr. Young thoroughly knows the north where he spent many years in logging operations and has extensive business interests. He declares that the sawmills in the Lake Nipissing district are well worth visiting and that the citizens of the progressive town of North Bay will see that everything is done to make the stay of the Ontario retail lumbermen a pleasant and memorable one.

Mayor Ferguson, of North Bay, has written Secretary Boultbee stating that a committee of the town council has made every preparation for the reception of the visitors, and the freedom of the town will be extended to them Arrangements have been made for a shanty lunch in the open air at Sweet Briar, and many other interesting features are on the programme.

Orangeville District Holds Meeting

Government Sales Tax Still Needs Many Points Elucidated, Declare the Members

Branch No. 6 of the O. R. L. D. A., Inc., celebrated July 1st, this year, by holding a meeting at Harriston, Ont., the home town of one of their most enthusiastic members, Mr. John Howes. In spite of the fact that the Dominion Day holiday presented strong local attractions everywhere throughout Canada, there was a good attendance at the meeting. Harriston itself was in gala attire for the day and presented a fine appearance to the visiting dealers, who were much impressed by the attractive appearance of the town and the exuberant loyalty of its citizens.

J. A. Matthews, of Orangeville, chairman of the Branch, presided at the meeting and directed the deliberations in his customary effective manner. As usual, J. B. MacKenzie, of Georgetown, was on hand to give the proceedings the benefit of all the energy he could put into them. Mr. Howes' two sons were also present, and Robert Dixon of Grand Valley brought along his son, who assists him in the business, and promises to become as successful a dealer as his father.

The natural subject for the opening discussion of the meeting was the government's sales tax. Since this tax was announced, on May 19th the varied assortment of amendments and rulings which have issued from the Department of Inland Revenue, and from the Finance Minister, have resulted in making the whole situation bewilderingly difficult for the retail lumber trade. A lengthy discussion of the subject took place, but at its conclusion the members were unable to reach any other conclusion than that it would be necessary to struggle along in the dark for a further indefinite period, until the government tells them what they must do, in a manner which can be understood. They were unanimous in their opinion that there had never been so confusing a tax imposed in Canada before and that the government had made a serious mistake in endeavoring to put it into effect when its details and the method of collection had been only half baked.

Following the consideration of the tax, the members devoted most of the balance of the afternoon to the exchange of opinion regarding trade conditions. The gist of the discussion was to the effect that it might be said to be a favorable and advisable time at present for purchasing shingles, but that dealers should be careful about purchases of all other stocks. The members were all careful to give the others the opinion that they should not abandon purchasing altogether, but should buy solely for their known requirements, or those which they could reasonably foresee.

J. B. MacKenzie told the members about a visit he had recently paid to St. Marys. Ont., for the purpose of looking over the yard conducted there by D. C. Baird, one of the progressive members of Branch No. 7 of the O.R.L.D.A., Inc. Mr. MacKenzie was loud in his praises of the splendid shed used by Mr. Baird for storing his stock. He explained that the shed was divided into compartments in which all the stock was stored on end. This kept the stock in the best possible condition and made handling it a much simpler and quicker matter than when material is stored flat.

Motor truck delivery and the question whether a charge should be made for delivery came in for discussion also. The truck question seemed to be a doubtful matter to several of the members present on acount of the impassability of the country roads in winter. Some of the members reported, however, that they knew of dealers in Ontario who managed to operate trucks successfully nearly the whole year round, and to arrange for the use of horses during the period in the winter when the roads made sleighs necessary.

It was decided that the next meeting should be held at Orangeville during the first week in December.

The Price of Logs Drops Heavily

There has at last come a change over the market, so far as logs are concerned. In plain language the bottom has dropped out of it and logs are now going begging, says a recent despatch from Vancouver. Not so many weeks ago, cedar logs were quoted as high as $40 a thousand feet. To-day the same logs can be obtained at as low as $20, and in one instance it was stated that one of the most prominent sawmill men in the province made a big sale at $15.

It was inconceivable that the prices of logs could remain in the clouds, with the country almost ready for big deliveries of lumber and shingles. A few weeks ago, the loggers were asked to reduce. But economic conditions took control, and, to-day, logs are being quoted at almost the price they were a year ago. It looks like the beginning of the end of the inflated prices, and it now only remains for the demand to become more pronounced and more stable to bring market conditions back to what they should be from the point of view of orders.

Not a few of the sawmill operators are marking time to see what is to be the outcome of the present condition of affairs. Few, if any of them, have been talking a close-down for an indefinite period, but with the rosy reports from the prairies on the crop conditions, and the urgent necessity that exists for more houses all over the country. it is felt that before many weeks have passed, the demand will be much greater than it is now, or has been for some months.

As a matter of fact there is, as one of the operators expressed it, no log market to-day. Lumber manufacturers are buying where they can get the logs and that is almost anywhere and, for the first time for many years, the lumberman practically is in the position of being able to say he will pay so much and no more. Just how long that will last remains to be seen. Once the real process of building construction starts throughout Canada and the United States it is more than probable that there will be a different story o tell, but meanwhile, logs have dropped and it would not be surprising if they continued to drop in price for at least the next thirty days.

The consumer need not think for a moment that this means tremendous reduction in the price of lumber. Prices have already fallen off, but there is still a considerable differenec between the figures of to-day and those of eighteen months ago when more normal conditions prevailed, comparatively speaking. Eventually there may be some reductions, but nothing worth getting excited about. The ultimate result of all the fluctuations that have taken place and the vicissitudes through which the lumber market has passed, is going to be higher than they were in pre-war days and that these rates will be maintained for the next five years.

Reference was made recently that important developments in the shingle industry were likely to take place in a short time. The indications are that that time is approaching and it will not be surprising if a radical change is shortly brought about in a matter that has engaged the attention of those engaged in the industry for the past six months. Nothing definite has yet been done.

May Develop Power at Grand Falls

Definite action of some sort, with regard to the development of the power possibilities of Grand Falls, the largest potential power in the province of New Brunswick, is expected as a result of the conference between representatives of the Great Falls Power Company, in which the late Sir William Van Horne was interested; the International Paper Company, which is understood to have control of the power company, on the one hand. and the Provincial Government on the other. At the last session of the Legislature an ultimatum was delivered to the company; those in possession of the falls must undertake their development to the satisfaction of the Government, or give way and permit the Government to make use of the power. Their chief consideration is that the power should be made available, and any steps in that direction will be warmly welcomed.

Lumber Transit Car Penalty Still Stands

The ten dollars a day penalty on cars of lumber held at reconsigning points in the United States after the expiration of free time, which was to have been removed June 1, has been continued until November 30. The Interstate Commerce Commission gave special permission to file on one day's notice, notwithstanding its prior action in issuing a reduced rate order, the effect of which would have been to cancel the penalty. The reduced rate order was changed so as merely to allow union depot companies, which had never imposed demurrage or any other penalties, to be taken out of the list of participants in the tariff. Special permission authorized all other companies parties to the Fairbanks' tariffs to continue the imposition of the penalty until the end of November. Thus again is the official O. K. put upon this matter on account of its value and need. The records of the Commission show the order has a proper influence against indiscriminate reconsignments of cars of lumber, and that such reconsignments are not necessary to the welfare of the business or the public.

The National Retail Lumber Dealers' Association has repeatedly stated, says the "Monthly Letter and Bulletin," and we do so again at this time, that it is not against transit cars of lumber, as such, but that it is against the evils which have grown up around this privilege which is detrimental to the proper distribution of lumber at retail, and this order we believe to be of value in that direction.

How Freight is to be Paid

The following rules are prescribed by the Interstate Commerce Commission of the United States to govern payments of freight charges after July 1, 1920. This decision was reached in the Commission's Ex Parte No. 73, respecting Section 3 of the Interstate Commerce Act to regulate commerce, as amended by Section 405 of the Transportation Act of 1920.

"It is ordered: That the following rules and regulations be, and they are hereby, prescribed to become effetcive on July 1, 1920. and to remain in force until the further order of the Commission:

"1. Where retention of possession of any freight by the carrier until the tariff rates and charges thereon have been paid will retard prompt delivery or will retard prompt release of equipment or station facilities, the carrier, upon taking precautions deemed by it to be sufficient to insure payment of the tariff charges within the period of credit herein specified, may relinquish possession of the freight in advance of payment of the tariff charges thereon and may extend credit in the amount of such charges to those who undertake to pay such charges, such persons being herein called shippers, for a period of ninety-six hours, to be computed as follows:

"(A) Where the freight bill is presented to the shipper prior to, or at the time of, delivery of the freight the ninety-six hours of credit shall run from the first 4:00 p.m., following the delivery of the freight.

"(B) Where the freight bill is presented to the shipper subsequent to the time the freight is delivered the ninety-six hours of credit shall run from the first 400 p.m., following the presentation of the freight bill.

"2. Every such carrier shall present freight bills to shippers not later than the first 4:00 p.m., following delivery of the freight, except that when information sufficient to enable the carrier to compute the tariff charges is not then available to the carrier at the delivery point, the freight bills shall be presented not later than the first 4:00 p.m. following the day upon which sufficient information becomes available to the delivering agent of the carrier.

"3. Shippers may elect to have their freight bills presented by means of the United States mails, and when the mail service is so used the time of mailing by the carrier shall be deemed to be the time of presentation of the bills. In case of dispute as to the time of mailing the postmark shall be accepted as showing such time.

"4. Sundays and legal holidays, other than Saturday half holidays, may be excluded from the computation of the period of credit.

"5. The mailing by the shipper of valid checks, drafts, or money orders which are satisfactory to the carrier in payment of the tariff charges, within the period of credit prescribed above, may be deemed to be payment of the tariiff charges within the period of ninety-six hours of credit. In case of dispute as to the time of mailing, the postmark shall be accepted as showing such time."

South Western Executive Convenes

A meeting of the executive of the South Western Ontario Retail Lumber Dealers' Association was held recently at the Hotel Sanita, Chatham, Ont., at which A. R. Saunders, president, presided, and the following directors were present:—Messrs. Chas. Hubbell, Thamesville, G. D. McPherson, Merlin, T. C. Warwick, Blenheim, B. F. Clarke, Glencoe, secretary-treasurer, and M. R. Bogart (S. Hadley Lumber Co.), Chatham.

Several matters of importance were discussed and good progress was reported in Association work. The interest taken by the members is very keen and the outlook for the coming season is bright.

Recession in May Building Activity

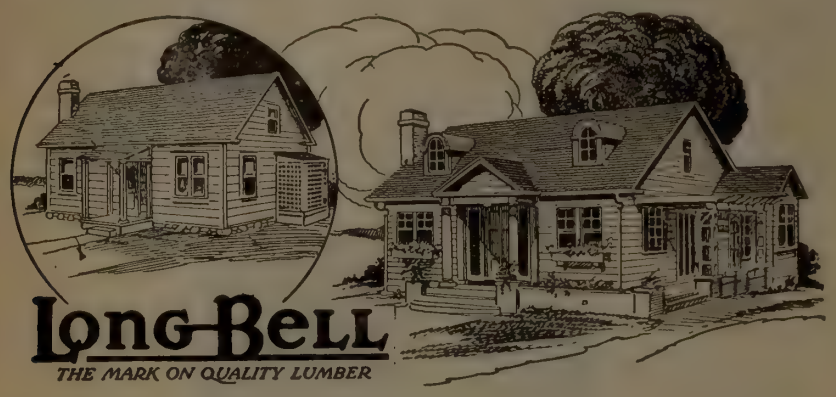
May building statistics reflect plainly a decline in building activities, according to the last issue of the American Contractor. Returns from 192 cities give an estimated valuation of only $128,370,237 as compared to a valuation of nearly $200,000,000 from 200 cities for April. This is only 20 per cent. gain over May 1919 operations whereas April operations showed a 115 per cent. gain. June and August were the record-breaking 1919 months but there is no indication of a June peak this year; possibly this may have been passed in April. It has, unless the railroads can be made to function, says The Contractor. The decrease from April activity is more noticeable in the larger cities and the sudden letting down in issuance of building permits is attributed to the ever increasing chaos in transportation. The average value of permits per city for May has decreased about in proportion to the recession total for all the cities.

How Big Firm Encourages Publicity

A second book of dealer advertising cuts, supplementing the series issued in November, 1919, has just been published by The Long-Bell Lumber Company, of Kansas City, Mo.

The first series was very popular from the beginning, hundreds of dealers requesting cuts for their local newspaper advertising. Files containing actual newspaper clippings, show a wide range of these cuts.

The new series includes four trade-marked lumber cuts, two Long-Bell Forked Leaf Oak Flooring cuts, and six Long-Bell Creosoted Fence Post cuts, all in two and three column sizes. A few of these cuts are also available in one-column size. The lumber cuts



suggest home-building, remodeling, attractive improvements for old homes and trade-marked lumber. The two oak flooring illustrations show children playing on smooth, durable Forked Leaf oak floors. The economy. permanence and attractiveness of Long-Bell Creosoted Fence Posts are especially stressed in six cuts. Two electros of Long-Bell dealer signs complete the new series.

As in the case of the first series, the proofs of the new cuts and advertisements are bound in convenient form. The pages are perforated and may easily be torn out to send to the printer. Blanks to be filled out with instructions to the printer are at the bottom of each page.

New Plant at Eburne is Model One

Regarded as one of the most modern shingle plants in British Columbia the new mill of the Dominion Shingle and Cedar Co., Ltd., replacing the one burned in September of last year, is now in full operation at Eburne, B. C. Undaunted by the high cost of machinery and equipment of all kinds, the company decided to leave no stone unturned to make the new mill a most modern one in every detail, a sprinkling system and duct collecting system being installed, the former as a warning from past experience, and the latter with a view of protecting the health of the employees.

Situated on a site of seven acres and having an excellent waterfront of 610 feet, the buildings, which are substantially constructed, have been allocated to positions to conform with the demands of the underwriters, who have given one of the lowest rates of insurance on any mill in the Lower Mainland.

The boiler house, 45 x 75 feet, stands on piles, and is 45 feet from the power house, which adjoins the mill proper. It contains three boilers of over 400 h.p. capacity, and fitted with Dutch oven feed, the fuel coming in through an overhead conveyor with openings above each feed hole.

The power houses contains Whelan twin engines and also a generator of 300 electric light capacity. Farther out on the waterfront is the pump house with a capacity of 1000 gallons per minute, connected with the sprinkler system and also a 30,000 gallon supply tank.

The mill contains 13 Letson and Burpee machines, one hand machine for spaults, an 86 in. Disston cut-off saw, Heaps Engineering Co. steam splitter operating 60 in. saw and two knee-bolters.

The plant has a new air cooled burner recently completed by the Walsh Construction Co., of Vancouver, 85 feet in height and 55 feet in diameter. To accommodate the working gang of 100 men, the company has just completed a modern bunkhouse about 100 yards from the mill which is fitted with dining rooms, kitchen, chef's room, and 40 rooms with two bunks in each. Shower baths have also been installed.

Saw and Veneer Mills for Ancient Colony

A St. Johns, Newfoundland, report states that engineers and surveyors have arrived from the United States to begin work preparatory to the erection at St. George's of a paper and pulp mill and a saw mill, which. it is claimed, will be as large as any plant of the kind so far erected in Newfoundland. There will also be two veneer mills to manufacture abundant growth of birch wood in the district and a factory for the making of boxes and barrels. The different factories will be equipped with modern and up-to-date machinery. The company is composed of British and American capitalists, who own and control about 1,450 miles of timberland in St. George's territory and also about 950 miles of timberland at Grand Lake, where they also intend to erect in the near future a pulp and saw mill, and freight the products to the docks at St. George's by rail. The company intends to export the pulp and paper to England and the United States. The lumber, barrels, boxes, etc., will be sold to the local market, as well as exported. The saw mill is to be erected near the railway and the water side in St. George's Harbor, where a large pier will be built to a depth of water enabling ocean-going ships to load in safety.

The Standardization of Lumber Sizes

A recent letter from the Engineering Bureau of the National Lumber Manufacturers' Association concerning the work they are doing in relation to standard sizes of yard lumber, shows progress in this matter and that further efforts need to be made to bring this important work to completion.

The matter of standard sizes for yard lumber is to be discussed at a conference to be held in Chicago the latter part of September. This is in accordance with a resolution in which the Second American Lumber Congress went on record as favoring the standardization of sizes of yard lumber and recommending that the regional manufacturers associations carefully consider the sizes as suggested in Report No. 1 of the Engineering Bureau, National Lumber Manufacturers' Association, and that a further conference be held of representatives of the associations not later than September, 1920.

"We are glad to report that the matter has been actively taken up in some of the associations and our work has been endorsed by the engineers and architects as well as both the wholesale and retail lumber dealers, and the Wholesale Sash and Door Association.

"There are some manufacturers who fail to realize that there is a real demand for standardization. We will be glad to have any comments you may care to make on the needs for standardization from your viewpoint; also suggestions as to the best way to bring the importance of this work to the realization of those manufacturers who are slow to act on this matter."

Helping the Dealer with Suggestions

The Beaver Board Companies have mailed to several thousand reliable job carpenters some suggestions as to methods of securing the most attractive results from applying Beaver board. Plans have been prepared showing three ways of using Beaver board in a living room and these plans are being sent to all who request detailed plans and specification sheets. Incidentally, the name of the retail lumberman in the vicinity who handles Beaver board is given on a separate sheet. These are simply two of the helps the Beaver Board Companies are extending to the retail lumbermen who handle their products. At present over one million square feet of Beaver board is being applied daily.

The Wood Construction in "Shamrock IV."

"The wonderful strength of carefully selected, well-seasoned and properly disposed wood" is emphasized by the designer of Sir Thomas Lipton's challenging yacht, "Shamrock IV" as quoted in an article in a recent "Scientific American" which gives the leading characteristics of this craft. The international yacht races will be held July 15th and will arrest widespread attention, as in former years.

Although "Shamrock IV" is of practically the same displacement as the cup defender "Resolute," it carries 25 per cent. more canvas or 10,800 square feet as against 8,650 square feet for "Resolute." "Shamrock IV" is a boat of great initial stability capable of carrying a huge spread of canvas—its spread of sail reaching 170 feet above the deck—and this ability is due, according to its designer, to the "wonderful strength" of the wood. The hull is sheathed with three layers of mahogany, two layers inch thick, placed diagonally in opposite directions at 40 degrees to the vertical, and an outer layer ⅝ of an inch thick, placed longitudinally, the whole being very thoroughly fastened together with the joints evenly distributed. The deck is of birch veneer, ⅝ of an inch thick and the hull is stiffened against distortion by running birch veneer bulkheads at each web frame from the bilge to the deck along each side of the hull. The hull is also stiffened longitudinally by a series of wood longitudinals, about 2½ inches square in section.

The mast, two feet in diameter, is of wood and hollow, as are the other spars. The topmast truck is 145 feet and the top of the clubtopsail 170 feet above the deck. This means that if Shamrock were afloat on Broadway the topmost point of her clubtopsail would be level with the cornice of a 14-storey building, and this, on a waterline of 75 feet.

Forestry Men Will Visit Montreal

American forestry men will shortly visit Montreal in connection with the gift of Mrs. Harold F. McCormick, of Chicago, a daughter of John D. Rockefeller, who has donated to the city a 17,000 acre tract of land. Part of this gift is to be developed and laid out as a great public zoological garden, which is to occupy hundreds of acres, and will represent a $5,000,000 enterprise.

Mr. McCormick is said to have donated to the people this territory in perpetuity, and it appears that the Forest Preserve District of Cook County, Illinois, will have charge of its development, as a representative committee of that department has been detailed to visit the cities of Cincinatti, Washington, Philadelphia and New York, and in addition, Montreal, for the purpose of collecting data for the best methods of carrying out this large undertaking.

An Improved Rotary Veneer Lathe

The Coe Mfg. Co., Painesville, Ohio, recently published Bulletin No. 221. The company, who adopt the slogan: "The oldest and largest manufacturers of veneer cutting and drying equipment in the world," show their improved rotary veneer lathe. It is the result of many years of experience in building veneer machinery. The firm state that they have received many helpful suggestions and instructive criticisms by friends who use veneer lathes in the production of their product. The Coe veneer lathe has long been widely and worthily known to the industry, and this latest development embodies valuable improvements as a result of progress and development in this branch of engineering. It is announced that the first machines built were subjected to months of actual use under the most critical observers, and any defects which developed were corrected before the firm decided to put the improved rotary veneer lathe on the market.

Where the Teredo Leaves Timber Alone

One of the great basic industries of British Columbia, the manufacture of lumber, finds its natural location on the Fraser River, in and around New Westminster, where there are numerous sawmills, shingle mills and other plants engaged in the manufacture of lumber products, says a recent despatch.

The first includes the plant of the Canadian Western Lumber Company at Fraser Mills, just outside the New Westminster's easterly limit, which has a capacity of 350,000 feet every ten hours.

Plants within and immediately adjoining the Vancouver limits include the Brunette Sawmills, the Bucklin Lumber Company, the Timberland Lumber Company, the Lumber Products, Limited, the Laminated Materials Company. the British Columbia Manufacturing Company, (a concern whose export of boxes has so increased that it is now building a second unit with a capacity double that of the first); the Westminster Mill Company, the Dominion Shingle Mills, the Independent Shingle Mills, and others.

With the almost unlimited timber resources of British Columbia, and the enormous demand for lumber for re-construction, practically all over the world, this industry promises unparalleled expansion in the next few years.

The Fraser River is the logical location for the lumber plants of the lower mainland, for several reasons. It offers sites of sufficient area for this purpose, at a cost not prohibitive as in centres where the industrial areas are already congested with plants requiring less elbow room; and it offers adequate space for booming grounds in fresh water, free from the teredo which infests the salt water of the Pacific. This immunity from the teredo alone is a factor of much importance to mill men.

New Welding and Engineering Company

There has been recently organized in St. John, N. B., a new branch of mechanical industry, the St. John Welders and Engineers, Ltd., who will engage in all classes of oxy and acetylene and electric welding, also machinist and engineers' work.

The personnel of the new company is comprised of three prominent St. John men, J. B .Barrett; president, who has been for twelve years a chief engineer in the British Navy; L. J. Gallagher, managing director and secretary-treasurer, who has been throughout the duration of the war consulting and travelling engineer for the Imperial Munitions Board; also K. J. MacRae, of the firm of MacRae, Sinclair & MacRae, barristers, who is vice-president of the company.

This company are now engaged in the repairing of all parts pertaining to any metals which may become defective. They are also prepared to undertake the manufacture of all classes of steel tanks and containers. This especially pertains to gasoline tanks, water sprinklers, steam traps, air receivers, etc., also portable and stationary boilers requiring manufacture or repairs.

They are also ready to do all kinds of marine and stationary boiler and engine work, as they are equipping their plant with the very latest electric welding unit, and are in a position to operate on vessels requiring work of this nature at the company's own dock, as they have acquired a dock suitable to accommodate vessels up to fifteen hundred tons register. They will look after machiners' jobbing, etc., and as Mr. Barrett and Mr. Gallagher are expert engineers, they will also be in a position to furnish estimates on any work submitted to them.

Calling Another National Conference

Plans are under way at Ottawa for the calling of another national industrial conference, at which both Capital and Labor will be in attendance. The appropriation for this purpose was provided by Parliament in the Department of Labor estimates which passed during the last week of the recent session.

The conference held last year, it is felt, was productive of good results in bringing Capital and Labor together and ironing out many incipient differences. This year it is hoped to continue the good influence started last September.

It is not likely that the conference this year will take place before September or October, but the probable dates are expected to be announced in the near future.

Mr. Drury Scores Timber System

Speaking at a Dominion Day celebration at Strathroy, Ont., Premier E. C. Drury took occasion to refer to the timber policy of the U. F. O.-Labor administration of Ontario and said that "the timber inquiry which has been going on was started because Ontario with ten times the resources of New Brunswick, was receiving only the same income as New Brunswick. It looked rather queer. What was wrong? The inquiry shows that the system was rotten to the core. Sixty per cent. of the returns as to cuts of timber were perjuries. The returns were forgeries. When the amount pilfered is got back, and we will get it back, the people will be shocked.

"The new forest policy includes fire protection for the forests and reforestation in that part of old Ontario where necessary. Proper administration will give us an income never dreamed of.

"The Department of Mines will be the next to be investigated, and we will see if we have been cheated in that department also. We intend to get the right amount and then spend the receipts right.

If It's Home

In a certain town in a certain section of our country there lives a very rich man. His name is—let's see, we'll call him Jonathan Jones.

The name of Jonathan Jones in that city is a synonym for riches,—for the arrived.

"Rich as Jonathan Jones," the by-word goes.

A few months ago a young married couple moved into their newly built home, a little, exquisite home, not costly or elaborate, but containing all that makes a woman's heart burst with choking happiness, and that causes a man to swell his chest and say, "It's mine."

"How do you like your new home?" an acquaintance asked the wife.

She fairly beamed.

"Why," she said, "I feel richer than Jonathan Jones."

* * *

Richer than Jonathan Jones,—richer than Croesus, richer than the man who might find the fabled wealth of the Incas.

Rich in more than money, because money is a sorry solace for an empty life; rich in love, and good cheer, and kind words. Rich in the tender pat on the cheek, in the touch of loving and loved hands, in absolute contentment, and contentment, they say, is the acme of happiness.

* * *

Home.

The houseboat on the great river; the cabin with dirt floors in the wilderness; the narrow fronted strip in the congested town; the four-rooms-and-bath of the moderately successful; or the gold door knobbed abode of the masters of finance.

If it's home, it's an interpreter of Heaven.

Hall Caine on Canada's Pulpwood Supply

G. R. Hall Caine, formerly paper controller and adviser to the Ministry of Munitions, has returned to London, Eng., after a tour of Canada, and says that the alleged paper shortage is nothing more or less than a shortage of wood pulp machinery.

"With reforestation, regrowths and conservation there is, presumably, enough wood pulp to last all the paper mills now in operation in Canada for 100 years, if they were all situated in the Province of Quebec," he said.

According to Mr. Caine, Canada offers a most fruitful field for British capital in connection with increasing wood pulp facilities. "I was assured that any such enterprises would have the wholehearted support of the Dominion Government authorities," he declared.

He quoted the chief forester of Quebec to the effect that he "need have no uncertainty in promising to provide pulp paper mills with raw material in perpetuity, even if all the mills of that province doubled their capacity."

Mr. Caine admitted that there was a world shortage of paper and said that there was nothing hopeful in any recent proposals to find a paper substitute, most of the suggestions submitted to the Ministry of Munitions during the war having been found impracticable.

"Let me explode at once the bubble that there is a shortage of timber for paper making, discussing, of course, neither the Scandinavian nor the Russian situations, but that of Canada, and taking Quebec for the purpose of statistics," he said. "In Qubec alone there are between 70,000 and 80,000 square miles of timber limits, equivalent to 51,200,000 acres of forest. Usually it is reckoned that pulp woods run on an average of between eight and ten cords to the acre. This would mean that in Quebec to-day there are between 450,000,000 and 500,000,000 cords of pulp wood. The annual cutting runs between 3,000,000 and 4,000,000 cords. Therefore, there is a hundred years' supply."

Mr. Caine gave two reasons for the paper shortage. First, the fear of the Canadian forest interests, who, seeing the situation in the United States, where wholesale cutting with no attention to reforestation was going on, were brought to the realization that only fifteen years' supply was left, and, second, the terrific losses as a result of forest fires in Eastern Canada where it was estimated that eighteen trees were destroyed by fire for every one felled. The percentage of these losses was higher in the dry climate of Western Canada, where twenty-three trees were destroyed by fire for every one felled, he said.

Mr. Caine placed the consumption of paper in the United States at 40,000 tons a week. Canada, he said, was supplying the United States with 12,500 tons a week, and meanwhile the Americans are seeking a 25 per cent. increase of this to take care of their consumption, despite the fact that the total Canadian output is only 16,000 tons a week.

"Summing up the situation, I am convinced that the enormous, growing demand in the United States for news print is going to make the European situation increasingly difficult during the next four years or more," he said. "Not only will the United States absorb all the news print that Canada can produce, even including the production of the new machines now being installed, but she will force herself, both for news print and for wood pulp, into the European markets and will become a stern competitor in the British mills.

"What is necessary is to enlarge the present manufacturing capacity of the mills of the world. In this connection Canada offers splendid opportunities. Not only has she timber, but she has the huge water power necessary for cheap production.

"One thing is quite certain, and that is unless something is done in this direction, and is done speedily, the price of paper for news print will go up still further.

Historic Tree Nearly Wiped Out

The cedars of Lebanon, famed in history, are reported to have been almost wholly wiped out during the world war. First the Turks cut them down for fuel to be used on their locomotives, and then the conquerors of the Turks continued the destruction. No doubt military exigency demanded that these celebrated forests should be sacrificed and, since sentiment plays a small part in warfare, the famous trees were regarded with no other eye than that which saw in them common material with which to produce motive power.

A writer in the San Francisco Argonaut deplores the fact that stern necessity led to the disappearance of these trees, some of which were said to be nearly 3,000 years old. They were historic even in the time when the army of Sennacherib, 608 years before the Christian era, laid waste the country, as related in the Psalms of David, Pliny, the Roman historian, said the durability of their wood was everlasting, and the Arabs regarded the trees as endowed with the principle of perpetual existence. Timbers unearthed in the ruins of ancient Assyrian cities have been found practically unchanged after the vicissitudes of 2,000 years and more. The giant growths thrived best in the mountains south of Beirut.

In ancient times the oil of the trees was believed to have curative properties and was applied to the bodies of sufferers from leprosy. The Romans used the oil to preserve their manuscripts.

Individual trees often attained a girth of forty-two feet, and height of ninety feet was common. The spread of the branches, exceeding even the height, made a profound impression upon those who beheld them.

The Farmer and the Yardman

Handling trade with a firm understanding between you and your customers makes lasting friends. They immediately have confidence in you. They will continue to trade with you.

Handle merchandise which you can personally recommend, regardless of the cost as compared with competitive lines. It is well to know what your competitor handles, but when it comes to driving a bargain, talk your merchandise and forget to mention your competitor or his line. Let your trade make reference to your competitor and they will express themselves along these lines if you give them time to do so. Then and there is a good time to be a good listener when it comes to getting pointers.

When the question of cost is raised, reason with him as to the direct benefit he is to derive from the investment. The farmer is in business for himself and knows a paying proposition when placed before him. Prove your point and he will venture with the rest.

Being personally acquainted with your customers will put you in closer touch with farm prospects than any other method I know of. Having confidence in you, they will tell of improvements they contemplate, and also mention what their neighbors intend building. Make note of these facts and get in touch wherever improvements are planned.

Being suggestive and not insistent is a good thing. For instance a farmer will ask for a board or some other material which would be too good or not good enough for the purpose. Upon inquiry as to what the material is to be used for, your suggestions may prove profitable or helpful to him. Be interested—not inquisitive—in your customer and his needs.

Back up your statements, your newspaper advertising and your envelope enclosures by actually stocking the new things. The farmer has modern ideas. He is ambitious and anxious for a modern home; desires modern methods and better outside buildings. machinery, livestock. Money would not buy his right to have his educational system, his telephone and his automobile, which have placed him in direct touch with his fellow workers and town business men. Being so closely linked with his home town and the outside world, he has come to be an important factor in his community.

It behooves every one of us to deal with him in a modern, business like way, showing him the advantages of good building material and new farm buildings. We must be "up and on our toes," with new suggestions and modern methods, or he will go where they can be had without the asking. The farmer is our fellow business man. Let's get acquainted and gain his patronage.

Big Poplar Tree Yielded Huge Sum

The felling of a yellow poplar tree of giant size is a Kentucky incident worthy of narration. For untold years it had been a famous landmark in the hills of the Cumberland Mountains. A large lumber concern in Whitesburg not long ago cut this forest monarch, and about $11,000 was realized from the manufactured product. The tree was sawed into nearly 7,000 feet of first-class lumber, with several hundred feet of second-class stuff thrown in. Not for half a century, we are told, had such a tree been marketed from Eastern Kentucky.

My friend, have you ever heard of the town of Yawn
On the banks of the River Slow,
Where blooms the Waitawhile flower fair
And the Some-time-or-other scents the air
And the soft Go-easys grow?
It lies in the Valley of What's-the-use
In the province of Let-her-slide:
That old "tired feeling" is native there—
It's the home of the listless I-don't-care,
Where the Put-it-off's abide.

Hoo-Hoo Holds Drive Next Month

What the Organization Stands For and How the Membership Will be Largely Increased

The great Hoo-Hoo drive for membership begins on August 9th and will terminate on August 19th. H. R. Isherwood of St. Louis, Mo., secretary-treasurer of the Concatenated Order of Hoo-Hoo, reports that every assurance is being received of support and encouragement from all parts of the country. Every member now in good standing is expected to help increase the membership and anyone who has forgotten to pay his dues, is expected to put his shoulder to the wheel and settle promptly all arrears.

Secretary-treasurer Isherwood, in response to the question of "What is Hoo-Hoo?" says that Hoo-Hoo is an organization recruited from the best elements in all branches of the lumber industry.

H. R. Isherwood, St. Louis, Mo.
Secretary-Treasurer of the Concatenated Order of Hoo-Hoo

Hoo-Hoo is an organization which, unlike most other organizations of business men, takes no direct interest in the making of money and only such indirect interest as may grow out of the connection between money and the furthering of health, happiness and long life of Hoo-Hoo, as well as the advancement, both by practice and encouragement, of education and science relating to the promotion of lumber and the industry.

Hoo-Hoo is an organization founded upon the principles which embody and govern friendship, confidence and brotherly love—the foundation upon which the future and success of all associations depend.

Hoo-Hoo is an organization of international scope whose influence and power for personal good are limited only by the will of its membership.

Hoo-Hoo is an organization that insures every man in its ranks against finding himself without friends when friends are needed.

A few of the Concatenated workers from Aug. 9-19

Hoo-Hoo is the one organization with which every lumberman of sufficient standing (business or personal) who cares for the refinements of life should be affiliated.

Hoo-Hoo is going to be a steadily increasing influence in the life of lumbermen and a growing factor in the relations existing between lumbermen and those with whom they deal, because membership in Hoo-Hoo is going to become more and more a Hall Mark of respect.

Hoo-Hoo is the most powerful influence in the entire lumber industry in the matter of extending acquaintance, building good will and making lasting friendships.

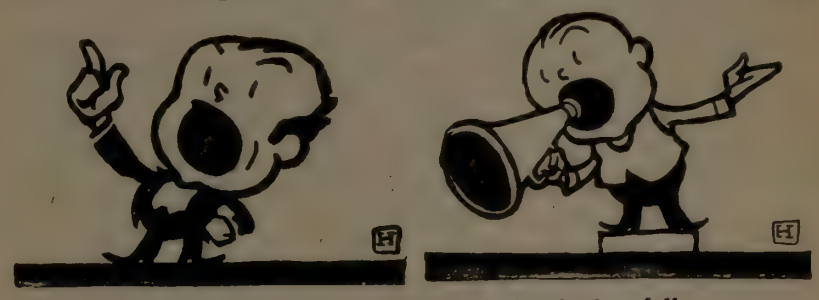
Because Hoo-Hoo is all of these things and more, it becomes important that the order shall enter upon a new Hoo-Hoo year with all of the strength of a revitalized membership, every Hoo-Hoo undertaking a part of the work of extending the Order's welfare.

That this may be accomplished, I am designating the period Aug. 9 to 19, inclusive, for a great Hoo-Hoo drive that will be international in scope and that is expected to enlist the active aid of every loyal member of the order wherever situated.

The Right Balance of Two Factors

Vision is that quality in a man that leads rail-splitters to become presidents; Conservatism is the thing that keeps his mind open to the advice and suggestions that come to him along the way. Vision is that quality in a business that gives us the wireless and the telephone in place of the pony-express; Conservatism is the thing that keeps businesses out of bankruptcy courts as they climb to success, says the "Disston Crucible."

It is Vision and Progressiveness on one hand against Conservatism and Cold Analysis on the other that build business. One furnishes the driving power; the other applies the brakes. Sometimes



Gathering the Hoo-Hoo in by the bag full

a business runs wild until it crashes at a turn; sometimes the brakes are applied so strongly that business comes to a dead stop. Vision is prone to forget that failure is possible; Conservatism forgets that it is necessary to look beyond the present.

No business can be successfully run without both elements—sufficient driving power and adequate braking equipment. Success is attained by the proper balance of the two.

Of the two, perhaps Vision is the thing that is most often lacking. Looking back through business history, it seems that great success has come to those enterprises that had more than common Vision.

Take, for instance, the present question of forest conservation. Our Conservatism tells us it is new, it is untried, it has hundreds of opportunities of "coming a cropper" and injuring our business.

But we must have the Vision to judge forest conservation in the light of future conditions. We must not allow Conservation to condemn or apporve it without first giving attention to Vision's story. The balancing of Vision and Conservatism is a merciless task—a labor that is never finished. But to those who are successful, the rewards are most generous. All great industries enjoying the fruits of world-wide prestige have attained their position because of ability to plan for the future and, at the same time, to recognize their limitations.

Three Ages in Lumber Selling

At one of the retail lumber conventions recently an old-time lumber salesman was called upon for a talk on the subject of selling lumber to the dealer and what the salesman can do to help the dealer, etc., and he declared that in his experience there have been three distinct and definite ages in lumber selling, as follows, says the "Gulf Coast Lumberman."

The hypocritical age.
The price cutting age.
The age of service.

The latter is the present day lumber selling era. The hypocritical age, he said, was back in the good old days that never will or should return, when a man had to buy drinks to get orders, and the size of his order file frequently depended very largely on the size of his drink buying expense account; and the next town he went to he had to go to prayer meeting with the religiously inclined dealer to his interest. It wasn't business, but it was done.

The price cutting age followed that one. In that age you might be all right, and your lumber might be fine, but if you couldn't make at least as good a price as the guy with any old service and any old lumber, you did not get the business.

But this, he said, is the age of service. Personality counts more than ever. Prices still count, of course, and will count until the crack of doom, but the biggest thing of all is what you can give the lumber dealer long after the car of lumber is delivered and stacked in his yard. The lumber dealer to-day is not hard to deal with.

News and Views in the Pulpwood Arena

Pulpwood Cut Will Be Heavy This Fall

There is considerable activity in pulpwood at the present time owing to the high prices prevailing. In some quarters it is believed that there is a speculative element entering the market and that certain parties are on the quiet buying up stocks in the hope of realizing handsomely this fall owing to the ascending value and scarcity of pulp of all kinds. Threre is no doubt that there will be an enormous cut of pulpwood this fall in Northern Ontario and Quebec and at present there is a great deal of poplar being offered. This is due to the growing scarcity of spruce, thus increasing the demand for poplar, while at the same time this is an easy wood to take out, light to handle and remunerative in operation.

E. R. Heyland, of the Thompson & Heyland Lumber Co., Toronto, states that his firm has been offered about 150,000 cords of poplar this season and cannot possibly find a market for all that is available although they will handle several thousand cords. South of North Bay they are paying $13.00 per cord for peeled poplar and $18.00 for peeled spruce and balsam. The peeling season will be over within a short time now and the quantity of wood peeled has been large.

The Thompson & Heyland Lumber Co. have been appointed purchasing representatives in Ontario for the West Virginia Pulp & Paper Co., of New York, in order to supply the mill at Tyrone, Pa., with poplar wood, while the West Virginia company's plant at Mechanicsville, N. Y., will be supplied with spruce.

Owing to the rapid development of the pulp and paper business, its expansion on every side, and the consequent higher prices paid for pulpwood, many settlers and contractors are directing their attention to this branch at the present time. Whether prices will go much higher or not depends largely upon the labor situation. The car shortage is felt at a number of points and the biggest problem in face just now is transportation. Conditions in this respect have not improved within the past few weeks. It is reported that there is a pile of 14,000 cords of poplar along the Gatineau Valley lying there for months owing to lack of cars to get it out.

Will Canada Soon Run Out of Pulpwood?

Lord Atholstan—Canada's "latest and last Peer"—who is at present in London, Eng., making arrangements for the Imperial Press Conference to held at Ottawa in August, was asked the other day for his views on the white paper shortage—one of the most serious problems facing the industrial world in general, and not only the newspaper owner.

"This question," he said, "will undoubtedly be the chief subject for discussion at the conference. The price of paper has gone up, literally, by leaps and bounds. Do you know that Canadian mills are now selling to the United States paper at $210, American, a ton?"

For comparison with this price it may be mentioned that the pre-war price of paper for printing purposes averaged from $45 to $50 a ton.

When Lord Atholstan was asksed if he could state the reason for this tremendous rise in price, he considered for a moment before replying.

"A few American publishers," he continued, "have of late bought in the principal mills of Canada, in some cases to such an extent that they have practically secured control of these mills, and they are now after other mills.

"It is not only the rise in wages which accounts for the increase in prices. There has been another factor.

"The newspapers of the United States and Canada have had fifteen months—since the armstice, in fact—of the most wonderful development in advertising that has ever taken place in the whole history of the two countries. The demand for publicity has, in fact, been insatiable.

"The papers, in consequence, have increased and increased in size until the bulk of them was limited only by mechanical capacity. The result has been a consumption of paper from fifteen, twenty, and up to thirty per cent. over the highest ever recorded.

"This demand has enriched the great papers of the larger cities beyond computation. Even the owners of smaller journals have made fortunes. One New York publisher who, I know, was struggling a year or so ago to make headway, in the last twelve months has amassed a sum of $500,000.

"It stands to reason that this enormous accession of business has enabled the newspaper publishers to pay almost any price for paper, and as the demand increased, up went the price. The paper mills are making up to thirty per cent. on capital.

"But the most serious aspect of the situation is that the supply of wood is within measurable distance of extinction. Indeed, it cannot be very long before a new kind of material for paper-making will have to be discovered, or newspapers will be high in price and also greatly restricted in circulation.

"It is a pity that the English newspaper publishers did not foresee the crisis. If they were to take up the question now, and appoint one, two or three from among themselves to go over to Canada to investigate the situation, there is still time for them to do great things to save the situation for British publishers.

"What is to be done is entirely a matter for private discussion among themselves."

Estimated Resources of Canada's Pulpwood

"We have not reduced the total estimate of 1,000,000,000 cords, but protest vigorously the right of anyone to make the deduction that Canada has 344 years' supply at current rate of consumption," writes Mr. James White, assistant to the Commission of Conservation, Ottawa, to The Wall Street Journal.

The reference is to that part of a Montreal despatch, stating: "It would take 344 years to exhaust the Canadian pulpwood limits at current rates of consumption, if the estimate of the Dominion Commission of Conservation be reasonably accurate. The limits contain at least 1,033,000,000 cords, a third in Quebec."

Mr. White shows the estimate mentioned "covers timber suitable for pulpwood through Canada consisting of spruce and balsam, in Ontario, Quebec, New Brunswick and Nova Scotia; spruce, balsam and popular in the prairie provinces, and Sitka, spruce, western balsam and cottonwood in British Columbia.

"Large quantities of this timber are commercially inaccessible to existing transportation, and of this inaccessible timber, much must remain so far an indefinite period. The extent to which the so-called pulpwood species are being used for the manufacture of lumber and other products is also overlooked.

"A revised estimate by the commission, based upon the best available data from all sources, places the total of spruce and balsam, the species primarily used for newsprint, accessible and inaccessible, at 301,000,000 cords, for eastern Canada. That which is accessible to existing transportation amounts to 421,000,000. With reasonable deduction for diameter limit restrictions, loss and waste in logging and stream driving and for merchantable material left uncut and which will be lost through insects, decay and windfall the total on the basis of potential delivery is 301,000,000.

"This includes 100,000,000 cords in Ontario, 18 per cent. private: 155,000,000 cords in Quebec, 14 per cent. private; 26,000,000 cords in New Brunswick, 46 per cent. private; and 20,000,000 in Nova Scotia, practically all private. As nearly as can be determined from census statistics the total of lumber and pulpwood consumption and pulpwood exports of spruce and balsam from these four provinces was in 1918, 5,500,000 cords, or 55 years' supply in eastern Canada at the 1918 rate of consumption, and the rate of cutting is increasing."

B. C. Paper Mills Face New Obstacle

According to recent reports it would appear as if the paper industry in British Columbia is facing a very serious situation. Practically all of the pulp and paper plants in B. C., and more particularly the larger operations, have oil-burning steam generating plants and are entirely dependent on this fuel for their power. The crude oil to run these plants has been coming from the Standard Oil Co. in California. It would appear as if the Standard Oil Co. are not able to supply the local demand for this fuel, with the result that they are cutting down on the quantities available for export; in fact there is a likelihood that there will be no more crude oil available for shipment to Canada. One reason for this state of affairs is that many new oil-burning steamers are being installed on Pacific Coast runs. The newspapers in Vancouver, Victoria and practically all down the Coast as far as San Francisco and San Diego, are dependent on the

B. C. pulp mills for their newsprint. Should the supply of oil for these plants be entirely cut off, they will be forced to shut down and the result will be a serious blow, not only to the pulp and paper industry but to the whole publishing business of the western coast.

Financial Men Visit Kipawa Plant

A large body of American financial men recently visited the model town of Kipawa, where the new Riordon plant is situated, and expressed themselves as astonished at the progress made on the plant. There is a development involving the expenditure of $15,000,000 in course of execution. The four large American financial concerns of New York and Boston, which had assisted in the financial arrangements were Parkinson & Burr, E. H. Rollins & Co., Coffin & Burr, and William A. Read & Co. The party was directed by officials of the Kipawa company, and Montreal intrests were also represented especially the Royal Securities Corporation. The party spent the whole day in inspecting the plant and learned with pleasure that the estimates of production had been considerably increased.

New Market for Canadian Pulps

The recent sailing of the SS. Maple Court, of the Canadian Government Mercantile Marine. from Quebec opens a new market for Canadian pulps. Some months ago the Spanish paper mills banded together as an organization to arrange for the selling of their products and also to increase their purchasing power. The association sent August Ramoneda to Canada to make a report on the qualities of Canadian pulps and the quantities available and to advise them as to the possibilities of securing their supplies from Canadian producers.

Mr. Ramoneda was so impressed by the possibilities in Canada that he immediately advised his principals to buy as much as possible. On account, however, of the scarcity of pulp only one-tenth has been secured of what is really required. The steamship Maple Court was chartered from the Canadian Government, and the first shipment is now on the way. The Spanish mills, which number 25, make all kinds of paper and consume about 65,000 tons of various kinds of pulp per annum.

Paper Pulp from Papyrus in South Africa

Arrangements for the manufacture of paper pulp from papyrus grass in Zululand are now in progress. A Norwegian company (Walmer Papyrus Pulp Co.) has secured a concession over severa hundred square miles from which to reap all reeds and papyrus grass, which are considered to be excellent raw materials for the manufacture of paper pulp. The company is capitalized at £160,000 ($779,000). A factory capable of turning out 6,000 tons of pulp a year is now being erected at Umfolosi. Most of the machinery and equipment was obtained in the United States.

The company intends at first only to manufacture paper pulp. It is estimated that it will take fully 40,000 tons of raw material to produce the 6,000 tons of pulp, but as the growth of this grass is perennial, and the area where it is found is so extensive, an abundance of raw material is assured each year. The papyrus has to be cut by hand in the same way as sugar cane. The grass is dried, passed through a cutting machine, and then pressed and limewashed. An abundance of cheap colored labor is available. Later on the company intends to extend its operations to the manufacture of paper, textiles, and bags.

Rich Pulp Resources of India

Except in the annual waste growths of tropical and sub-tropical forests, the cellulose expert to the Government of India as quoted in the World's Paper Trade Review, states he has concluded that no permanent settlement of the paper-maker's oft-recurring difficulties of supplies can be found. He has come to this conclusion after 24 years work on this problem in various parts of the world. For many years this expert has been doing exploration and experimental work in bamboo pulp; for the last ten years in the service of the Government of India. After an exhaustive exploration of the coastal belt of Burma, he asserts that there is sufficient bamboo in sight, with the Savannah grasses of Assam, to produce 14,000,000 tons of dry pulp yearly. Bamboo being a grass, its pulp has many qualities in common with esparto and it can be used for all grades of paper. For news print while it does not exactly take the place of strong sulphite, bamboo can be advantageously used to the extent of half the present percentage of sulphite and if mechanical pulp continues to maintain anything like its present value it can be so cheaply produced that it can take the place entirely of mechanical pulp. The total cost of production will not exceed one-half of the present cost of wood pulp.

A plant is being established by the forest Research Institute of India for further experimental work in investigating new sources of paaper making material and for assisting the development of bamboo pulp enterprises. The Indian government is favoring schemes which are being developed for the production yearly of about 70,000 tons of bamboo pulp.

Pulp Cannot be Made from Fine Theories

Editor, "Canada Lumberman."

I notice that the rate of annual growth in our forests must be increasing quite rapidly, as in the issue of the Pulp & Paper Magazine of May 13th, the Vice President of the International Paper Co. claimed a 4 per cent. growth, while in the issue of May 27th he claims it to be 11-3/7 per cent., and that there may be no misunderstanding in connection with these figures I will quote his statement verbatim:

> "As to the 'four per cent. increment,' I desire to quote from the Ninth Annual Report of the Commission of Conservation of Ottawa, and from Professor C. D. Howe of the Faculty of Forestry, University of Toronto. in his monograph entitled 'Forest Regeneration on Certain Cut-over Pulpwood Lands in Quebec.' In this brochure on page ten he states as his conclusion from exhaustive studies made in the St. Maurice Valley, it would take 70 years for a spruce tree, 4 inches in diameter, to attain a diameter of 12 inches.
>
> Let us see exactly what this means in growth percentage. A block of spruce 1 ft. long and 4 in in diameter contains 150.8 cubic inches. A block of spruce 1 ft. long and 12 in. in diameter contains 1357.2 cubic inches. Therefore in 70 years a foot section of a 4 in. spruce tree would gain 1206.4 cubic inches in attaining a diameter of 12 inches.
>
> This is an increase in the 70 years of 800 per cent., or an annual average increase of 11-3/7 per cent. per annum. And in considering this astoundingly large percentage of annual growth, it must be remembered that this is simply circumferential growth, and takes no account whatsoever of altitudinous increment."

The International Paper Company must be very short of wood when it becomes necessary to grow trees at such a rapid rate.

It is much to be regretted that pulp cannot be manufactured from fine theories. If it could be there would certainly be no shortage of paper to-day, but we are faced with a condition and not a theory. The figures quoted by this official of the International Paper Company are the very best evidence that there is positively no net annual growth in our much abused forests as they exist to-day, for if there were an 11 per cent. growth, a 44 per cent. or even a 1 per cent. net growth, there would be more standing wood on the Quebec leased lands to-day than there ever was, as the annual cut on these lands is only 2,000,000 cords, or less than 1 per cent. of the stand of 224,000.000 cords, as quoted by this official.

I am not vouching for any of the above figures, except the annual cut, which is correct. I am merely using his own figures to show that his contention that there is a net annual growth is ridiculous. When the cut only amounts to less than 1 per cent. of the stand of timber and still our supply is diminishing, so very much more than this amount every year, how can there be any net growth?

The fallacy of the contention that there is any such amount of growth lies in a fact that should be perfectly plain to any school boy. We might just as well contend that each child that is born lives to the age of three score years and ten, in which case the world would be as densely populated with human beings as the vice-president of the International Paper Company would have it covered with trees.

If anyone questions the rapidity with which our supply of timber is diminishing, I would ask why it is that some of the larger operators are now cutting in such remote sections that it takes two years to drive their logs to the mills, and why it is that limits have advanced in price from, say, $100 per square mile to $3,500 per square mile? Why pulpwood has advanced from $3.00 per cord to $30 and more, f.o.b.? Why fee land has advanced from $1 per acre to $10, $15 or $30, and over? Also why the size of logs has dropped from six or seven down to sixty or seventy to the thousand feet, and why they are shipping wood out of the country by rail that runs in size from four or five inches down to 1½ inches in diameter, mere poles that have only just begun to grow? Also why are all the larger paper companies in Canada planting seedlings in a large way as fast as they possibly can?

With the above cold facts staring us in the face it must. of course, be perfectly apparent to any man of ordinary intelligence that any claim made as to a net annual growth is simply a "delusion," and that the greatest satisfaction we have in this connection is in the knowledge that all of the people cannot be fooled all of the time.

Sincerely yours,

Frank J. D. Barnjum.

Annapolis Royal, N. S.

The Use, Care and Operation of Band Resaws

The first requisite in band resawing is of course, to have a well-constructed and designed machine. The wheels should be nicely balanced, run perfectly true on their spindles without jar or tremble, and thus the saw while in motion, if properly tensioned and fitted. will run without vibration. This is very important. The wheels should be of such form as to give the requisite strain to the different portions of the saw blade, and the tension device for straining the saw be such as to exert a constant, even force at all times. A machine constructed faultily in either of the above particulars will cause breakage of saws, either from over-straining or from vibration.

Various authorities differ as to the exact form to which the face of the wheels should be ground. They should be as nearly flat as possible and still retain the saw blade in proper position, rendering it capable of withstanding the back-thrust brought against it when re-sawing wide stock, etc.

Another no less important matter is a suitable place for fitting the saw blades, and the proper tools with which to work. The best resawing machine will prove a dismal failure unless the saws are properly fitted, and we wish to emphasize the necessity of providing

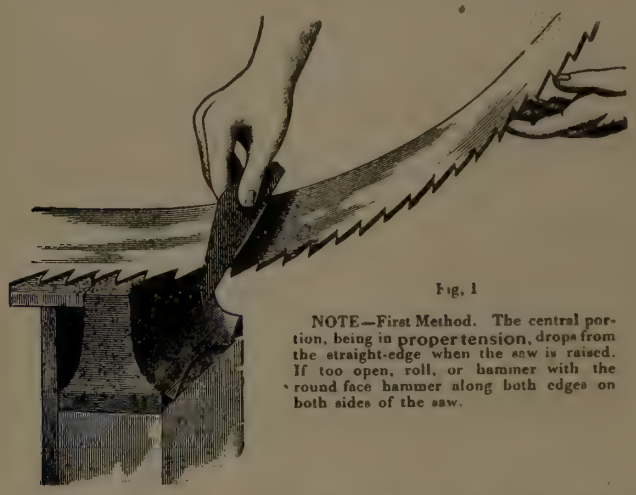


Fig. 1

NOTE—First Method. The central portion, being in proper tension, drops from the straight-edge when the saw is raised. If too open, roll, or hammer with the round face hammer along both edges on both sides of the saw.

a light, roomy filing room, suitably heated and equipped with modern tools.

While saws may be successfully filed and spung-set by hand, it is not profitable to economize too much in the saw-fitter's equipment. The use of the following is recommended: Automatic saw sharpener, anvil, hammers, straight-edges and tension level, swage, pressure side-dresser, brazing table and saw vise.

As the toothed edge of the saw does the guiding, this edge should have the greatest strain, the back edge nearly as much, and the central portions expanded just enough to insure the saw blade doing good work. This is ascertained by actual practice. It is found that when resawing hardwood more tension is required than when re-sawing soft, straight-grained timber, as the more difficult the wood is to cut, necessarily the more inclined the saw blade is to dodge, and thus friction is brought against a certain portion of the saw blade, more especially near the teeth or cutting edge. This heats the blade, expands it, and leaves the cutting edge of the saw slack, so that it will dodge and do poor work.

Adjusting the Tension Required

To provide as much as possible against this occurrence it is found advisable in some cases to leave the back edge of the saw a little longer than the front, and thus, as the saw heats, the upper wheel is free to rise and the cutting edge of the saw will remain taut, while should the back edge of the saw be the same length as the front this would prevent its so doing; hence it will be seen that in re-sawing wide hardwood the saw blade must be fitted somewhat differently from that required when resawing soft-grained material. When the saw blade is in proper tension the central portion of the blade is expanded or opened up, so that when the saw blade is raised the middle will drop away from the straight-edge (Fig. 1). The usual mode of testing for tension is that shown in Figures 1 and 2.

Still, some maintain that it is better to reverse this method, and press the saw down, as in Figures 3 and 4. The former method is usual and most convenient, and in that case the loose places in the saw blade will drop away from the short, straight-edge, and the fast places will be drawn to it.

With band resaws the width of the saw blade varies so much, also the material sawn, that it is difficult to state the exact amount of tension required.

According to the authority above referred to, the tension should be as uniform as possible throughout the entire length of the saw blade. A fast place may cause fracture from undue strain at that point, a loose place from excessive vibration. The tension should be so adjusted that the saw will bear firmly upon the face of the wheel. the principal strain being near the edges of the saw.

To adjust the tension, use only the hammer having a perfectly round face where it comes in contact with the saw, and so nearly flat

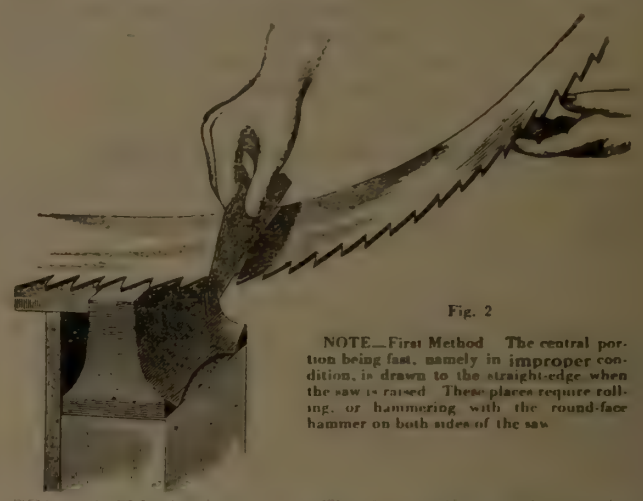

Fig. 2

NOTE—First Method. The central portion being fast, namely in improper condition, is drawn to the straight-edge when the saw is raised. These places require rolling, or hammering with the round-face hammer on both sides of the saw.

that it will not indent the saw with the blow you desire to use. If the face of the hammer is not perfectly round its use will put a twist in the saw.

If the saw is too open—that is. if the central parts drop away too much from the level—hammer the saw with the round-face along the edges lightly and equally on both sides until the proper adjustment is effected. If, on the contrary, the saw does not drop away enough from the straight-edge in its central parts, use the round-face hammer over the central portions lightly and equally on both sides of the saw until the proper tension is obtained. Different portions of the saw will require different treatment, the result to be obtained being uniformity of tension the entire length of the saw blade, and in degree to suit the surface or crown of the wheels.

A trial of the saw with the small straight-edge or tension level from time to time during the process of hammering, with a final test upon the mill, will enable the operator to determine the degree of ex-

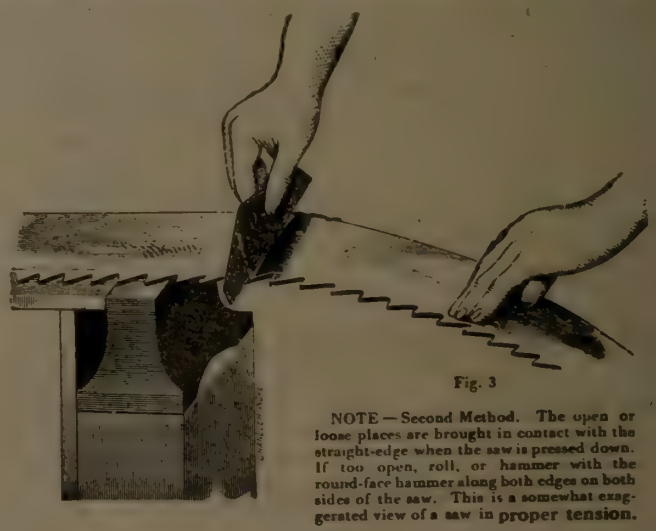

Fig. 3

NOTE—Second Method. The open or loose places are brought in contact with the straight-edge when the saw is pressed down. If too open, roll, or hammer with the round-face hammer along both edges on both sides of the saw. This is a somewhat exaggerated view of a saw in proper tension.

pansion of parts required. It is well to examine a new saw in this manner in order to obtain a proper standard, which, if the saw works well, may be adopted in practice.

Levelling and Straightening

The pein hammer is to be used only in levelling, straightening, and taking out twists. The faces of the hammer should be nearly flat, and the blow light, so as not to indent the surface of the saw. Heavy blows or a sharp hammer will crystallize the steel at the point of contact, and eventually cause fracture. The saw should not show marks of the hammer after hammering.

Lay the saw upon the anvil and levelling table; examine the portion of the saw which lies upon the levelling table by passing the short straight-edge over it at various angles. Whenever ridges ap-

pear, trace their direction or the angle at which they cross the saw with a piece of chalk, draw the part over the anvil and hammer down the ridges with the pein hammer. In hammering down the ridges the pein should always run in the direction of the ridge.

Curves upon the back or toothed edge of the saw are shown by placing the long straight-edge against the back edge of the saw on the levelling table. Mark the extent of the curve and its direction with the chalk.

The back of the saw can be drawn to a true line (see Fig. 5) by using the round-face hammer upon the hollow edge at the point of curvature, carrying the blows into the central portions of the saw sufficiently to prevent unequal expansion. and leaving the centre open as directed previously. Light blows should be used, and both sides hammered equally, care being taken not to give a heavy blow upon the extreme edge, which promotes fracture. If the back edge is rounding, the hammering must be done upon the toothed edge.

The back edge of the saw should be kept straight or a little convex, not to exceed 1/8-in. convex in fifteen feet length. The greater the convexity the greater the strain on the toothed edge. In straightening the back edge, be careful to maintain the tension. Examine the back edge frequently. In Fig. 5 the shaded portion indicates the part to be hammered.

Form of Teeth and Filing

The teeth should be as short as possible and have room to chamber the sawdust. This will add to their strength and prevent their vibrating in the cut. A long tooth is sure to tremble when at work, and thus do rough sawing. The spacing of the teeth depends entirely upon the width of the material sawn and the feed carried. In resawing narrow strips a fast feed is carried, and fine-spaced teeth may be

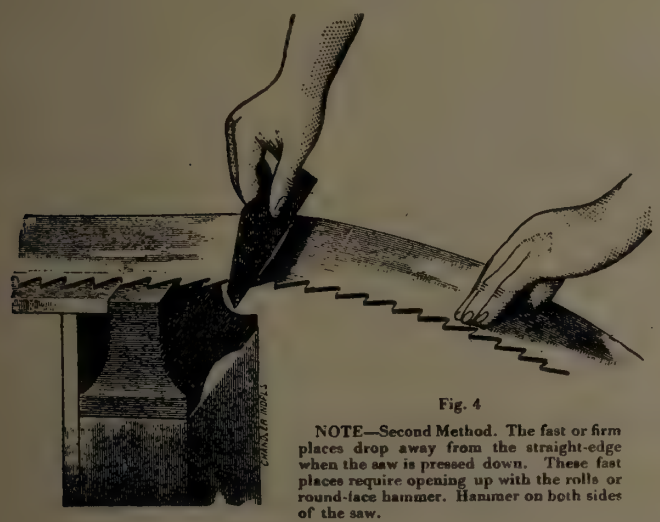

Fig. 4

NOTE—Second Method. The fast or firm places drop away from the straight-edge when the saw is pressed down. These fast places require opening up with the rolls or round-face hammer. Hammer on both sides of the saw.

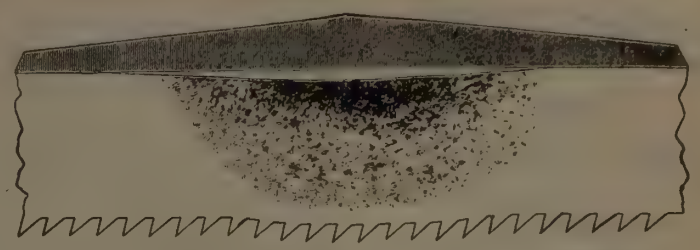
used. For general purposes teeth 1 5/8 inches from point to point give very good service. An 18-gauge saw may have teeth 3/8 of an inch deep; 19 and 20 gauge 5/16 inch; thinner than this 1/4 inch or less. In filing the band saw the teeth must be of one length, so that each does its share of the work. We advise the use of the swage, and the form of the swages point is very important. The only part of the band saw blade which should come in contact with the material sawed must be the cutting edge, and this cutting edge should have clearance both in the direction of the feed and in the direction of the descent of the saw blade. Hence the swage used must form the tooth broadest at the extreme point. Otherwise the tooth must be side-dressed by hand or a pressure side-dresser used. In fact this is a good tool to use in any event, as by its use the swage portion of each tooth may be brought into perfect shape. Do not use a side file.

In filing, an automatic emery grinder should be used, as it will be found a tedious operation, where much resawing is done, to fit the saw blades by hand. It is also difficult to avoid square corners and if these exist fractures will be apt to start from them.

It is probably unnecessary to say anything further about filing, other than to state that it is very essential. after the saw is filed, to examine each tooth and see that it stands perfectly straight, and that it has a perfect swage, namely sharp, keen corners with perfect clearance. If this is done the thinnest saw can be made to resaw perfectly the widest material. The saw blades will also be found to run a long while without resharpening and, in short, any extra pains which are taken in fitting the band resaw blade will be repaid tenfold, both in quality of work done and in the quantity turned out before resharpening.

The matter of the setting, that is, the form of the swage, giving each tooth a keen cutting edge, and of keeping the saw straight in the back, are the most often overlooked, and these conditions have caused the users of band resaws a great deal of annoyance. In conclusion, finish up the fitting of the saw blade before attempting to run it.

The cracking of band saw blades is caused by some of the following conditions: from overstraining or from vibration. Vibration may arise from any of the following causes: if the face of the wheel is out of true; if the wheels are out of balance; if sawdust and gum accumulate on the face of the wheels; uneven tension hammered in the saw blade. Then. too, the saw may be crystallized from too heavy blows with a hammer or from using sharp-faced hammers, or from the swage of the tooth being of such form as to crowd the saw against



Dark portion indicates where to hammer to straighten

the guides. The saw will also vibrate from insufficient strain. It is necessary that as near an even strain should be maintained on the saw blade as possible.

Hanging the Saw on the Mill

See that the upper and lower wheels are adjusted one in line with the other. Place the saw blade in position, the teeth only projecting over the edge of the wheel. Raise the upper wheel and provide the proper strain for the saw blade. Turn the wheels slowly around by hand and train the saw so that it will maintain the proper position, namely the teeth projecting half inch beyond the face of the wheel. Do this by tilting the upper wheel. When the proper adjustment has been made, secure the shaft in this position and do not further adjust it vertically (i.e., tilt) so long as you have this saw in use.

As the saw blade becomes full or tends to crowd back on the wheel, counteract this by the use of the cross-line lever This latter must not be abused. however, as a very slight adjustment is sufficient, "and the saw must not run in a twist." If the pitch or hook of the teeth is suited to the work done, and if the saw has been hammered to the proper tension, it will maintain its position firmly on the wheels with little or no use of the cross-line. A pitch or hook of the teeth which gives good results is about 5 inches to 12 inches in width of the saw.

Directions for Brazing Saw Blades

The ends of the saw blade are first prepared by filing a true taper, commencing back about 1/2 inch from the end and filing the saw thinner as it approaches the end, at which point it should be only the thickness of a knife-edge, one end of the saw being filed from the outside and the other from the inside. This being done the saw should be placed on the brazing table, the back edge being brought against the back of the brazing table. This forms a straight

edge, and will bring the saw blade to a straight line. Now dust some powdered borax on the under edge of the saw blade, and after cleaning a piece of silver solder of the proper size slip this between the ends on top of the borax. Dust some borax as well on the silver solder. The saw now being in proper position, the ends lapping 1/2 inch, the brazing irons should be slipped one over and one under the saw, and the screws adjusted so that the saw blade, when clamped lies in a perfectly level position. Now withdraw the irons, only loosening the screws enough to allow this and no more, heat the irons to a cherry red in a clean fire, again place them in position. and by means of the clamping screws firmly bring them to bear upon the saw blade. Leave in this position until cool, when the saw may be removed and the joint dressed and hammered the same as the rest of the blade. Some filers prefer to use muriatic acid in place of borax; the effect is the same.

Quick Action Section

Second Hand Machinery & Equipment Wanted & For Sale

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted

Two Hundred Thousand Feet 4/4 Birch, No. 2 Common and Better. Box 303 Canada Lumberman. 13-16

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
Montreal, P.Q.
1-t.f.

Birch Wanted

No. 1 Com. and Btr., 4/4" to 16/4". Name us your best prices delivered here for dry stock. Will contract for mill output in Birch, Elm, Basswood and Ash.

WARREN ROSS LUMBER CO.,
Jamestown, N.Y.
10-t.f.

WANTED

White Pine Spruce
ALL GRADES.
Also LATH of all grades

JOHN F. BURKE,
Aeolian Bldg., New York City.
2-t.f.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited,
123 Bay St., Toronto.
12-t.f.

Lumber For Sale

FOR SALE: Cull staves for crating purposes, thirty inches long, from four to seven inches wide, one-third of an inch thick. Trenton Cooperage Mills, Ltd., Trenton, Ont.
13-16

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

Pulpwood For Sale

1920-1921 Delivery

3,000-4,000 cords Spruce and Balsam.
1,000-1,500 cords Poplar.

JAMES THOMAS CLAIR,
Clair, N.B.
11-t.f.

For Sale

4,000 cords 4 feet sap peeled pulpwood, Spruce and Balsam, containing about 90 per cent. Spruce, for immediate or next summer delivery, situated at Blue River, Canadian National Railway; 23½ cents to Watertown.

QUEBEC LUMBER CO.,
98 St. Peter St.,
Quebec, Que.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Lumber For Sale

70,000 Pine 4/4 and 8/4. 50,000 Hemlock 8/4 dimension. Cheap for immediate shipment. Box 312, Canada Lumberman. 14

FOR SALE—2 cars small cedar post, 2½" and up to 5", G.T.R. point.
2 M ft. 2" Rock Elm.
8 M ft. 4/4 Cherry.
George Craik, Crampton, Ontario. 14

For Sale - Hardwood "Shorts"

excellent for novelties, etc., requiring small sizes.
1 car Hard Maple, 2" and 3" thick, S2S.
1 car Hickory, ⅞" thick, S2S.

Will sell very cheap to move quickly. Will give further particulars if interested. Address Box 302, Canada Lumberman. 13-14

Dry Merchantable Spruce

600 M. ft. 3 x 8—10/20', 75% 14' and longer.

J. E. Harroun & Son,
Watertown, N.Y.
14-15

Thick Dry Oak For Sale

1 car	3 "	1st and 2nds Red Oak
½ car	2½"	No. 1 Common Red Oak
½ car	3 "	No. 1 Common Red Oak
½ car	2½"	No. 2 Common Red Oak

FOR SALE
Immediately Available

We have the following Used Woodworking Machinery, all in first class condition, at the following prices, F.O.B. Cars, Montreal:—

1—No. 303 C.M.C. 10" Four Sided Moulder. Price	$1500.00
1—No. 313 C.M.C. 6" Four Sided Mouder. Price	$400.00
1—"AMERICAN" Heavy Type 4" Four Sided Moulder. Price	$400.00
1—"BERLIN" Heavy Twin Double Planer & Matcher, will plane two 12" boards at one time. Price	$1400.00
1—New C.M.C. No. 110 Planer, Matcher & Moulder. Price	$900.00
1—No. 6 "GREENLEE" Vertical Automatic Cut-Off Saw with Table. Price	$750.00
1—No. 350 "GREENLEE" Universal Boring Machine. Price	$150.00
1—48" "COLUMBIA" Three Drum Sander. Price	$900.00
1—No. 20 "TOWER" One-Man Two-Saw Trimmer; trims from 6 to 20 feet. Price	$375.00
1—"SMITH & PHILLIPS" Sash and Pocket Machine. Price	$250.00
1—No. 3 "GOODSPEED" Variety Lathe. Price	$375.00
1—"LEWIS T. KLINE" Variety Lathe, pattern 1915. Price	$425.00
1—"DAUBER BELL" Dowell Machine. Price	$700.00
1—"MACGREGOR-GOURLAY" 8" Four Sided Moulder. Price	$450.00
1—Heavy Self-Feed Rip Saw. Price.	$300.00
1—"H. B. SMITH" Two Sided Sash Moulder. Price	$150.00
1—"NEW BRITAIN" Chain Saw Mortiser having an outfit of 6 Chains. Price	$575.00
1—No. 438 "C.M.C." Hollow Arm Sander. Price	$90.00
1—"H. B. SMITH" Power Mortiser. Price	$250.00
1—"C.M.C." No. 509 Blind Slat Borer and Mortiser. Price	$125.00
1—"C.M.C." No. 911 Blind Slat Tenoner. Price	$75.00
1—New "OBER" No. 11 size 42" Handle Lathe. Price	$550.00
1—New No. 931 "C.M.C." Dowel Machine. Price	$360.00

Williams & Wilson Limited,
84 Inspector Street,
Montreal, Que.
13-16

FOR SALE—125 H.P. Brown Engine, Cylinder Head 16" x 28"; cast iron flywheel 12' in diameter, 24" face. Apply A. R. Clarke & Co., Limited, Toronto. 13-14

For Sale

One NEW KENDALL GANG—can be seen at the Wm. Hamilton Mfg. Co's shops at Peterboro. Apply for price to Schroeder Mills & Lumber Co., Pakesley, Ont. 13-16

For Sale

Harris Corliss horizontal twin steam engine, 18" x 48" cylinders, side cranks, 18' flywheel, 52" face, including jet condenser. In good condition and can be seen in operation. Apply Box 230, Canada Lumberman, Toronto, Ont. 9-t.f.

For Sale

One pair twin 12 H.P. Waterous engines, made for carriage feed; complete with piping—open for inspection.
One engine shaft—2 7/16" x 19'.
One large iron drum—30".
One large machine cut gear, 37" x 5" face.
One pinion machine cut gear, 11" x 5" face.
Two large rope pulleys—one take-up slack rope.
175 ft. of 1½ manilla rope. Price $200.00 F.O.B. cars, Parkersville, Ont.

Situations Wanted

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

WANTED—Situation as lumber salesman or inspector. Conversant with National Hardwood and British Columbia rules of inspection. Thoroughly experienced and can give references. Box 315, Canada Lumberman. 14-15

Fully experienced YARD MANAGER, employed at present, wishes to change. Would like a live point, in either Saskatchewan or Alberta, where there is business to get. Can furnish excellent references and take charge on 30 days' notice. Box 278, Canada Lumberman, Toronto. 13-16

LUMBERMAN, Canadian born, now engaged as manager of a Wholesale & Retail Lumber & Builders' Supply Company doing half million a year business in a middle western state, open for a proposition. I have had fifteen years' experience in all branches of the business. If you are looking for a HIGH CLASS EXECUTIVE I can deliver the goods. Box 305, Canada Lumberman. 14-16

Situations Vacant

Sawmill Engineer

Mechanical Engineer with good experience in constructing up to date sawmill machinery and with experience as sawmill designer wanted for large lumber company in Canada.

State education, experience, age and salary wanted.

Only first class up to date men need apply. Box 314, Canada Lumberman. 14-15

Foreman Wanted for Circular Saw-Mill. Able to file and hammer saws. Must be good man. State salary and when able to start. Apply Box 301, Canada Lumberman. 13-14

ENGINEER WANTED, second class certificate, to take charge of sawmill engines and steam. Also two good millwrights. Apply Box 260, Canada Lumberman, Toronto. 12-13

Man wanted to take charge of Sash Department in a city planing mill. Must be competent and be able to run machines as well as lay out sash. Apply Box 132, Canada Lumberman, Toronto. 4-t.f.

WANTED—Young man experienced in woods operation and saw mill, to take care as superintendent. Mill cutting one and one-half to two million feet per year. Apply, stating experience, reference and salary expected, to Box 219, Canada Lumberman, Toronto. 9-t.f.

Young man of experience in Stenography and Typewriting wanted as Bookkeeper for Wholesale Lumber office in Toronto. Good salary and opportunity for advancement. Give age, experience and references to Box 244, Canada Lumberman, Toronto, Ont. 10-t.f.

Business Chances

Open for contract to saw by M. Location in New Ontario or Trans Continental preferred. Box 317, Canada Lumberman. 14

Wanted

To Contract with Party who owns good portable mill, or small stationary mill to cut softwood and hardwood logs. To saw year round. Large quantity of timber to cut. For further particulars, apply to Petawawa Lumber Company, Ltd., Pembroke, Ont. 12-t.f.

FOR SALE—TIMBER LIMIT in Haliburton County. 1100 acres. 60% hard maple, beech, black birch, ash, elm, etc., balance spruce, hemlock, basswood and cedar. Timber is tall and thick. Siding 6 miles. For terms and particulars apply to

FRED INMAN,
11-14 Milton, Ont.

Saw Mill and Timber Limit For Sale

Saw Mill with a capacity of 35M per day, situated at a good shipping point on the T. & N. O. Railway. 50 million feet of lumber and 100 thousand cords pulpwood available. For further particulars apply to A. J. Bailey, 115 Stair Bldg., Toronto. 12-t.f.

SAW MILL MACHINERY WANTED—There is a constant demand for second-hand mill equipment of all kinds. If you have a nigger, planer or slab resaw for which you have no further use, advertise it in the Quick Action Section of "Canada Lumberman" and cash in on your original outlay. 12-t.f.

Standing Timber For Sale

We have some very desirable blocks of Timber listed with us for Immediate Sale, located on railways and within easy distance of shipping centres.

Both large and small stands of Hardwoods. Choice block of Basswood, also a large area of Pulpwoods.

The prices we can sell at should be an inducement for intending purchasers to make full inquiries from us if contemplating operating this Autumn.

WM. COOKE & SON,
Timber Brokers,
11-14 Stair Building, Toronto.

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about $4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments.

This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
165 Broadway
5-t.f. New York City.

Cut To Order

Heavy Oak Timbers and Piling.

PORT HOPE VENEER & LUMBER Co.
14 Port Hope, Ont.

SAWMILL AND LOGS FOR SALE

Practically new and modern sawmill with about 2 million ft. of logs ready to saw; mill has a capacity of 35 M ft. per ten hours; for sale on account of owner's illness; is now in operation and a rare opportunity for any one with experience and small capital; best site in Abitibi district. Apply Box 307, "Canada Lumberman." 14

Miscellaneous

Sawmill Wanted

A single band and band resaw sawmill complete including gang edger, planer and matcher, single surface planer, lath machine, bed saw, trimmers, adequate power plant and electric light plant. All must be in good condition.

This outfit is for use in Canada therefore preference will be given to offerings from there. A good steam feed rotary and band resaw would be considered.

Address with full particulars, Box 310, Canada Lumberman and Woodworker. 14-17

British Emissary's View of Pulp Situation

When he was in Canada early in the year, investigating the wood pulp situation, with a view to helping out the paper shortage in Great Britain, Ralph Hall Caine, former British deputy paper controller, did not spend much time in British Columbia. He has returned to England with very little offer of encouragement to the paper trade. In fact, so far as England getting any help, he expressed the opinion on his return to London, that it would be idle to expect any immediate relief. He said: "I don't see the slightest chance of Europe getting any pulp from Canada for at least three years." Though enthusiastic over Canada as a pulp-producing country, he sized up the situation with respect to the United States as a big customer. "In Quebec, Ontario and New Brunswick," he said, "I found the three provincial governments adamant in their refusal to allow the export of wood pulp to the United States or anywhere else. What is wanted," he continued, "is British capital to develop the pulp industry in Canada, otherwise the big interests in the United States, which require paper in the worst possible way, are certain to jump in and do so.

"Canada," said Hall Caine, "offers a splendid opportunity. She has not only timber but the huge waterpower necessary for cheap production. I am convinced there is a fruitful field for British capital in this direction and I am assured any such enterprise will have the whole-hearted support of the Dominion Government authorities. British newspaper owners must realize, as the Americans have, that it is essential they control their raw material supplies. It seems to me that if the provincial governments will not give way on the export question, the only way is for an all-round increase in Canadian production with a percentage of pulp allotted to the two countries"—(Great Britain and U. S.)

New Zealand Systematized Lumbering

In New Zealand a scheme for controlling the disposition of timber supplies was devised and put into operation. An advisory committee, upon which were represented the sawmillers, timber merchants, building trades and users of white pine, was appointed. This committee secured information as to domestic demand for various kinds of timber. At the outset it not only required the retention in New Zealand of lumber for the home market, but restricted the output of the mills. Subsequently, these restrictions were relaxed. The sawmillers undertook not to increase prices without the consent of the board of trade. The increase of supplies for home consumption, moreover, has served, it is reported, to prevent undue enhancement of prices in New Zealand.

Canada's problem is, in some respects, dissimlar to that which confronted New Zealand. Canada, in the first place, has in the United States a convenient market in which is a keen demand for lumber. Moreover, while Canada exports to the United States annually lumber valued at about $50,00,000, she also imports from the United States lumber valued at about $18,000,000. From the United States, for instance, some hardwoods are imported which are necessary for many purposes. United States buyers made contracts at $60 a thousand feet and even higher.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

MacLean REPORTS

Review of Current Trade Conditions

Ontario and the East

July is generally a quiet month in the lumber arena so far as the wholesalers are concerned, and this particular month sees no exception to the general rule. Prices on eastern stuff have been holding firm although hemlock is, perhaps, a little weaker due to the competition of southern pine.

The car situation is one regarding which wholesalers and manufacturers still have many complaints to make. In the mills manufacturing conditions are becoming stabilized, labor is less restless, logs are coming to hand in better shape and in larger quantities and producing conditions are, on the whole, better than they have been for some weeks. Of course there are a few exceptions but, generally speaking, manufacturers have little to complain of.

There is a possibility of a very serious car shortage this fall and it is feared if certain interests hold off buying too long, that they may not be able to secure stock when they want it. One wholesaler expressed the opinion this week that prices would be firmer on all lines of softwoods this autumn, and as conditions in the labor and material market were becoming more normal, next season will witness the greatest building boom ever enjoyed in the Dominion. Another leading representative stated that cull lumber of all kinds is in exceptionally strong requisition and very difficult to get hold of in sufficient quantities at the present time; in fact he intimated that he had a standing order for all the lower grades that he could possibly secure.

Those who are going after business aggressively have little cause to complain in the lumber arena today. The lath market is holding fairly firm and as increased quantities are available, it is predicted that there may be a softening in prices.

Hardwoods are in fair requisition, and, while no heavy buying is going on, the number of smaller orders keeps up, notwithstanding that furniture manufacturers and phonograph firms have somewhat curtailed production since the recent luxury tax came into effect.

According to a Kansas City report southern pine has dropped another ten per cent. Quotations being made there recently were as low as $55.00 a M., a reduction of $5.00. The value of southern pine has descended about 30 per cent. in the last month. Pine lath has been reduced from a high figure to $15.00 in the same period. The hardwood market across the border has shown a slight softening. The fall in pine stock from the high level reached earlier in the season is due largely to the desire of some of the bigger dealers to stabilize the market and increase building. Builders and contractors have been advised not to expect any further drop but that present prices will be maintained throughout the balance of the year, is the word received by a number of Ontario firms.

There has been a slight advance in B. C. shingles which are now on the up grade, the increase being from 30c to 50c per M. The ascension in price is caused by many of the mills in the West being closed down. On western boards, shiplap and small dimension there has been some stiffening of prices and advances of from $3.00 to $5.00 have been made on a number of lines.

Latest advices are to the effect that retailers are buying in fair quantity and representatives of B. C. mills report very good business for this time of the year.

Lath are holding firm in price and there is no surplus, while the building trades are calling for a considerable quantity.

United States

Conditions in the lumber market generally remain quiet although there is a perceptible improvement in some lines. In others a great deal of price-cutting has entered the field but business has not been stimulated to any extent by such methods. The car situation is still causing shippers great anxiety and at many points there is extreme congestion. Building in numerous cities and towns has slowed down to a degree greater than at first anticipated owing to the constant demands of labor and the succession of strikes. This has resulted in a huge number of projected enterprises being held in abeyance. While many cars of lumber have been put in transit, these have been sold at reduced prices.

Speaking of conditions in the building trade, one eastern firm writes:—Labor is gradually getting more stabilized. On account of the lack of transportation, the essentials for building, such as brick, cement, lime, glass and hardware, have not been able to reach the yards, although some slight improvement has been reported this last week. Until money is available for building at a normal rate, we cannot expect to see any revival no matter what prices are. While there has been a slowing up in the volume of orders received at the principal producing districts, the chief difficulty encountered by the mills is in connection with transportation. The car shortage has been pronounced all through the first half of the year, and it is getting worse. The diversion of equipment to the grain and coal trade, for the movement of last year's grain and of coal supplies to points distant from the mines, cut into the supply of cars available for the shipment of lumber; and the approaching harvests in the middle north will demand even more facilities.

If the volume of orders flowing to the mills has been lighter, there has also been a material reduction in the output of lumber, in all sections but the Pacific northwest. Southern pine mills are only producing about two-thirds of normal capacity, and during the month of June the new orders exceeded the amount shipped. Even at that there has been a steady lowering of price quotations, and this has probably contributed to keep the volume of new business lower than it otherwise would have been.

The output of northern pine, hemlock and hardwood mills has been greatly cut down by the timberworkers' strike and, though the men are gradually returning to work and mills are now operating to more nearly capacity, the lost motion cannot be made up this year. This tends to keep prices for these woods on a level close to the high point.

In the hardwood arena there has been a quickening of the market and prices are holding fairly firm. Any buying that is going on is for immediate requirements, and there is no disposition on the part of any large consumers to accumulate stocks. Transportation and money conditions are the chief factors which restrict trade. With their warehouses in many cases filled with manufactured goods which they cannot ship because of their inability to secure cars, not a few are able to undertake larger obligations owing to financial limitations.

The manufacturers of hardwood lumber are commencing to accumulate some stock, but the supply at the mills is not yet menacing, and may not become so. One reason is that the wholesalers seem to have faith in the future of the market and are buying available stocks for future trade. They are not paying the high prices which prevailed a few months ago, and they hardly expect to sell their purchases at the prices they could then obtain. But they are able to buy at values which leave them a margin on what they believe the market will be.

Some factory consumers found themselves with more stock on hand than they can use, and part of this is finding its way back into the market. It is not being sacrificed, however, for there is no present need for that.

In regard to southern pine, there has been a slight turn for the better, and there has been a perceptible increase in the demand during the past few days along with a firming up of prices. Production is, however, much curtailed, many of the smaller mills having closed down recently as a result of the lethargic state of the market. As soon as the market shows signs of definite improvement, these mills will resume activities, as it is felt that the latent demand for lumber is very large and that it cannot remain dammed up as it has been for the last few months.

Referring to the general car situation, an exchange says:—The transportation of the crops is the problem which disturbs the entire industrial and commercial world, and this year the country undoubtedly will wake up to a realization of the insufficiency of its transportation system if it never has before. With the open top cars commandeered for coal hauling and the box cars going to the wheat fields, the lumber industry faces the prospects of being badly crippled for an indefinite time.

Great Britain

During the past two months a note of pessimism has prevailed in certain ranks owing to the continued depression in trade. On the other hand there are several optimists who believe that the present quietness is but temporary and has been caused by factors which will sooner or later disappear, such as the heavy taxation, the liquidation of stocks caused by the tightness of money, etc. Speaking of the trade in general, a recent issue of the Timber Trades Journal says:—The motto for all timber merchants should be patience, for

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

without it there is no chance of success. We have heard of many cases where importers' goods have arrived in London unsold, and where it has been quite impossible to sell the wood at a profit on c.i.f. terms. In all cases, however, the firms in question have wisely decided against forcing sales. Taking the long view, and knowing that in the first place supplies cannot be in excess of the demand, and secondly, that sawn goods cannot be replaced at the current figures, the importers are convinced that spot prices must rise, and they therefore see no necessity for parting with their stocks unless they can secure a fair trading profit. We admit that at the moment the situation seems a little precarious, but a continuation during the present month of the improvement shown in June will put a different complexion on the whole industrial situation.

There is not much improvement in the hardwood market, and there will undoubtedly be some low sales of various American woods in the near future, as the holders of stock will not be able to wait until the consumption increases. That this increase is all that is necessary to keep prices firm seems clear from the fact that new importations cannot be made at the old figures; but new importations are not wanted now, and will probably not be in demand until the autumn. Looking ahead, therefore, the position would appear to be a sound one, but the freight problem may upset all calculations. It may be that in the autumn we shall see Atlantic freights on a very different level, and a heavy reduction would have some bearing on hardwood prices. Although supplies in America are not large, shippers would be glad of some further business, and would sell if they could without endeavoring to secure the full benefit of the lower freights. Just as in softwoods, there is a good demand for prime qualities, and especially for prime oak, but at present the general inquiry is dull and business slack.

From all parts of the country comes the cry that joinery quality wood is almost unobtainable. Inquiries for such goods are numerous, and the fortunate holders of stocks for prompt delivery are getting figures which far exceed anything hitherto paid. For 3 x 11 in. u/s red we have seen quotations at from £72 to £75 per standard ex dock. For 3 x 9 in., 2 x 9 in., etc., the price is anything from £58 to £65; for 3 x 7in. as much as £48 to £50 is quoted, and for smaller sizes in good quality values are almost proportionate. The demand for such wood is strong indeed, and all the fresh arrivals will be sold promptly as soon as they are ready for delivery. For many purposes, of course, commoner quality wood has now to be used, but architects are too particular, and work is often delayed by the insistence on a quality of timber which is simply not available. We are therefore likely to see throughout this year an appreciation in the value of what is known as joinery wood; and this will take place even although a lower level of prices may be current for common unassorted. Formerly the difference between fine quality 2½ x 7 in. and ordinary unassorted was about 20s. to 30s. per standard; now it is frequently from £8 to £10. In deals the disproportion is even greater. It is little wonder, therefore, that the trade is eagerly looking forward to the hundred thousand standards or so which are reported to be available this year from the White Sea ports, provided satisfactory arrangements can be made with the Russisan authorities for the shipment.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Export Business at Quebec Hit By High Rates

The timber and deal trade at Quebec shows no improvement in regard to export to the United Kingdom over conditions that prevailed at the end of June in 1919. Activities in export are hampered by the high prices in freight, 300 shillings per standard of three inch deals, and 450 shillings per standard in shipping of timber to the United Kingdom. There are very little hopes of these freight rates being reduced, which are ten times in excess of the rates which prevailed previous to the outbreak of the war. Quebec exporters and agents of western lumber interests have been hoping that the present rates would be to some extent this month and August but present appearances do not indicate any appreciable change.

One of the reasons advanced for the continuation of the steamship freight rates is the enormous amount of lumber ordered by the Imperial Ministry during the war that is still held for shipment. The wood goods that had been purchased by the Imperial Government in the west and stored at Montreal and its vicinity has been carried oversas. In the present, however, there is a very large quantity of lumber and timber ordered by the Imperial Government stored east of Quebec, including Matane, Miramichi and other centres of the lower St. Lawrence.

In the meantime the movement of Canadian trade in the St. Lawrence has a considerable influence on the freight rates charged by liners, especially in the spring and fall. The amount of grain to be shipped to European markets this fall will have some influence on the rates in freight for the shipments of timber and deals. The Quebec export timber and lumber merchants who ship largely manufactured lumber and white pine from the ports of Montreal and Three Rivers, have had a fairly good season up to date, by the shipment of small parcels of wood as part cargo of almost every European liner, but the shipments of full and part cargoes from Quebec have not up to the present been very active; in fact up to normal on account of the high costs of freight, as well as scarcity of ship bottoms.

The local Quebec lumber business has not been at all active this summer. This is due to the high demand in price for wood, with the result that construction work has been much retarded. The wholesale lumber trade in the Ancient Capital on this account are not doing the business they expected last spring, and although it has been made clear to the contractors that no reduction in the present or near future can be expected, they cannot educate the people to believe that the price of lumber will be maintained, with the result that men who wish to invest in new construction are holding back with the hope that the quotations of material and labor will be lowered.

In a conversation with a leading Quebec firm of manufacturers and exporters your correspondent was informed that the Quebec trade did look forward to a break in the shipping rates to the United Kingdom in July and August, but lately had come to the conclusion that the chances of lower freight rates in the present appearance of things were slight.

Montreal Business Quiet With Prices Firm

Speaking generally, the Montreal lumber market is dull, a condition which is usual at this period of the year. But although business is slack, prices continue to hold firm. Some wholesalers are of opinion that the peak has been reached, and that the tendency in the immediate future will be towards a slightly lower range of values. At the same time the mills it is stated, continue to ask substantial prices for their lumber. In view of the undoubted high costs, it is difficult to see how values can fall to any appreciable extent.

Transportation is a prime factor in the market just now, particularly in relation to United States business. There are complaints that goods are very slow in being moved, and that it is difficult to secure sufficient cars.

The local section is slow, although the building points are very satisfactory. The permits for last month totalled $8.428,595, an increase of $1,697,178; while for the six months' period the total was $8,541,904, a gain of $5,654,480. Very little progress has been made with local scheme for workmen's dwellings, and it looks as if nothing definite will be done this year. The Council originally asked for a loan of $3,000,000, but as the suburbs have been allocated about $2,000,000, this has been changed to $1,000,000, which will not go far in supplying the acute shortage of houses.

Box makers report that there is a brisk demand for their commodity, and the sash and door factories have also some good orders in hand.

The lath market is a little softer, but there is not a great deal on the market.

The demand for lumber for the United States has fallen off, partly owing to the fact that the yards have not yet disposed of the goods ordered earlier in the season and partly to the disinclination to do business in the midst of the Presidential election.

B. C. products are meeting a fair sale, at the lower prices prevailing.

Although the British market is weak, a fair amount of lumber is being shipped. Freight rates are very high, about 300s. per standard, which is militating against very large exports, especially in view of the drop in prices on the other side.

Canadian exporters are now devoting more attention to business with South America, and this season large consignments have been sent to that country.

Pulpwood is in very strong request, but supplies are limited, and

Demand Slackens in Ottawa But Prices Hold Firm

Continued firm prices, with a lessened demand, and a most uncertain outlook as to European export, coupled with the continued strike of 450 former employees of the woodworking factories and plants, were the principal events of interest in the Ottawa lumber market, during the opening period of July. Taken all around, though the volume of trade was greater than during a corresponding period a year ago, it was doubtful if the outlook for the future was as good. In some circles of the trade the correspondent of the "Canada Lumberman" has been informed that it will be as long as another six months, before trade begins to really pick up or begin to fulfil the expectations, that lumber dealers had formerly held for it.

The market though it did not show any signs of weakening as to price, slowed up considerably, in both the domestic, and foreign demand to the United States, as compared with the closing period of June. In the early days of July the principal demand from the United States swung from the middle and lower grades, to "twelve inch" stock, indicating that the better grades of lumber were coming back into their own again on the American market. Spruce and pine stocks were principally in demand.

A fair analysis, from the standpoint of a lay mind, of the market was that the trade did not exactly know where it was at. For instance the wholesalers still remained completely in the dark as to what prices the manufacturers still remained completely in the dark as to what prices the mnaufacturers were going to charge for this year's sawmill cut. The retailer was not buying, because he did not exactly see his way to sell, and he was more or less timid about taking a chance on stocking up, with quotations from the manufacturer being held in abeyance. The European export situation while attracting much attention, really remained a case of sixes and sevens, though exporters watched every move in the market with keen interest.

The principal demand, though it was not as great in volume as during late June, continued to come from the United States. The domestic demand though it kept up somewhat was not in proportion to the late June business. Local building conditions, outside of the disturbed labor situation, indicated that lumber sales for consumption at Ottawa should increase. June building permits dropped $120,000 below those of May, but on the two months the total estimated valuation was considerably in advance of that of 1919.

The general impression from the manufacturing and wholesaling end was that quotations would maintain their present levels, and it was further freely predicted that manufacturing prices for this year's sawmill cut would advance. The assumption for the advance was based almost entirely on increased operating costs, and the higher wages being paid to labor.

Pine and spruce stocks commanded the most attention. Labor with the sawmills remained reasonably plentiful. The supply of logs to sawmills in the Ottawa Valley while they were not as great as had been expected or as many as the operators would have liked to have seen, remained sufficient to continue operations. As compared with the middle of June the situation as to logs did not grow any worse, and the water instead of falling to the extent the manufacturers had expected, continued to keep up fairly well. The concensus of opinion of the trade was, however, that with the shortage of logs early in the year, the season's sawmill cut was certain to be reduced. This means that stocks next winter will be still lower than during the winter of 1919-20. The foreign car situation showed some improvement. Cars became more plentiful and the despatch of shipments more prompt.

Official trade confirmation that the demand for stocks for European export had slowed up considerably, in comparison with last August and September, was made. It is declared that the future outlook as to the European market is a great deal more serious and complex than many persons at the present time believe.

One of the first and principal factors that Canadian exporters to England had to look at before selling stocks was the financial situation and the rate of bank discount, which early in July stood at seven per cent. Ocean space became more plentiful, but the rate of 300 shillings per standard did not vary. In this connection lumbermen were playing hide and seek and would not commit themselves as what might or might not occur. The holding of a steamship conference, as announced in despatches from London early in July, was taken in several trade circles to mean that it was for the purpose of ascertaining the extent, tonnage, facilities and operation of the British Merchant Marine, and weigh them off against the American Marine. Rumors were current in the trade that with the passing of the American shipping bill that an American Lloyds was to be established.

Generally the outlook as to future European export trade remained very uncertain. The holding of the Imperial Lumber Conference in London which is being attended by Canadian representatives was regarded in well informed circles as being more for making a general survey of the timber and lumber resources of the British Empire than anything else. Certain cycles of the trade did not look for it to immediately benefit the lumber or timber trade or bring about any readjustment of present ocean shipping facilities or rates.

Conditions with the woodworking plants and factories remained pretty much as they were two weeks ago. The strike of the mill workers continued and the city council and Mayor Fisher unanimously decided to make application to the Department of Labor for the appointment of a board of conciliation. The heads of the woodworking factories were under considerable criticism, inasmuch as they made no general or public statement as to their attitude. The Mayor told the employers that he considered it too late in date for any group of employers to refuse to deal with a union organization. In some circles of the trade it was learned that the heads of the plants were prepared to do so, without any dictation from the chief magistrate of Ottawa or anybody else. The manufacturers stood pat and filled their sash and door, and flooring orders from reserve stocks they had accumulated before the strike began.

Lath remained slow. Shingles were in fair demand, but were not plentiful.

The suit entered by the MacDonald Lumber Co., of Toronto, against the Hendun Lumber Co., of Haileybury, Ont., for nonfulfillment of a contract for supplying 750,000 ft. of merchantable spruce and jack pine was settled out of court recently, the defendants agreeing to pay a stated sum for damages and also the costs of the action.

The MacDonald Lumber Co. have removed from Room 9, 34 Victoria St., Toronto, to Rooms 16 and 17 in the same building.

Alaska Resources Attract Attention

Requests for information are being received by the Alaska Bureau of Publicity from capitalists in all parts of the country who are interested in pulp wood timber, mill sites and water power, presumably as a result of the recent intimation that the Department of Agriculture is about to propose 30 or 35-year leases to those desirous of engaging in the manufacture of pulpwood.

The Tongass National forest, comprising about 15,000,000 acres, approximately one-sixth of which is heavily timbered and abundantly supplied with mill sites and water, is the subject of many inquiries. Those who have closely observed the awakening of interest in the pulpwood industry in Alaska are of the belief that the elimination of the "cash in advance" and "year to year" system of leasing timber lands will result in the development of a great paper-making industry which, they are confident, is bound to attract attention to other natural resources of Alaska which have long awaited the touch of capital.

Newsy Happenings From The West

Michigan interests are reported to have acquired timber limits from the East Kootenay Lumber Company to the extent of 500,000,000 feet, and will operate a pulp and milling business at Wattsburg or Cranbrook, B. C.

The provincial government of Saskatchewan has decided upon an aggressive policy for the development of the natural resources of the province. The possibilities of establishing a pulp aand paper making industry is to be examined into as the preliminary investigation has shown that there are immense resources of pulpwood in the province. The Government will also investigate the lumber industry to ascertain what can be done to prevent forest fires and to find out if they grant enough speculative price as regards the development of lumbering.

The plant of the Lumber Products, Limited, New Westminster, B. C., narrowly escaped destruction by fire. The boiler-house and fuel bin were destroyed entirely and considerable damage was done to the dry kilns. Strenuous efforts on the part of the foremen aided by a favorable wind, were all that saved the plant from total destruction. The fire chief stated that were it not for the wind, nothing in the world could have saved the whole plant.

A recent despatch from Winnipeg says: Directors of a new company, the B. C. Lumber Mills, Limited, incorporated for one million dollars, were here recently. The company will shortly commence construction of a huge lumber mill at Wattsburg, B. C. W. A. Wilson, of Warsaw, Wis., is president of the company, which is backed entirely by American capital. Purchases of plant, machinery and equipment for construction of the mill are already on order and boilers for the plant will be supplied by a company in Winnipeg. The company has acquired extensive timber limits in the Cranbrook district and proposes to establish one of the largest mills in the province. Two portable mills have already been put into cut lumber for the flumes required to bring the logs to the mill. Construction on the mill itself will commence in the near future and will be in operation by the spring of 1921.

MILLMEN

and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented **Steel Water-Jacket Furnace.** This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

Do you, or do you not want to save half your coal? It's up to you. Ask for particulars.

General Survey of Lumber Field

The last issue of the "Labor Gazette," Ottawa, gives the following summary of activities in the lumber line from Coast to Coast:

Charlottetown reported some slackening in lumbering activity towards the end of May, but a large quantity of lumber was sawn during the month. The saw and shingle mills in St. John and district ran steadily. The lumbermen in Fredericton district had a successful spring drive, with good prospects of bringing the entire cut to the booms; saw mill workers were steadily employed. Bathurst reported the drives progressing favorably with most of the smaller streams cleaned up, but in some the logs were held up for want of water. Round Quebec river driving was nearly completed, but few saw mills had started operations at the close of the month. Sherbrooke reported the drives continuing and great activity in the saw and shingle mills. At Ottawa and Hull the saw mills were busy but the burning of some lumber yards affected the local labor situation. The two sawmills at Pembroke were very busy, more men being required. Peterborough reported lumbermen very busy rafting and river-driving, and the sawmills were already very busy. At Sault Ste. Marie bush work was opening up again, and many men were required also for loading ties and pulp wood on cars. There was some demand at Port Arthur for river drivers. Winnipeg reported some falling off in the demand for lumbermen in Manitoba. Many of the men who worked in the woods of northern Saskatchewan during winter and spring found employment on farms. Edmonton reported a demand for men for the mills in northern Alberta. At Fernie lumbering activity was at its height, but prospects were stated to be somewhat unsettled owing to market conditions, some companies at this point and also at Cranbrook, after running double shifts for two months, having accumulated large stocks; it was expected, however, that active conditions would be maintained until next fall; the post and pole industry was rather slack. the prairie farmers, who are the chief buyers of this product, being engaged on seeding. Nelson reported the supply of common labor as fair, but skilled labor was scarce and some overtime work was necessary. Vancouver and New Westminster reported the saw and shingle mills working to capacity; loggers were well employed. Victoria and Nanaimo reported lumbering and milling operations active on Vancouver Island, but hampered by shortage of shipping facilities; several new saw and shingle mills started during the month.

Breezy Notes From the East

Since the recent conflagration in the New Brunswick woods other forest fires were reported. One broke out on lands owned by the Miramichi Lumber Company and the New Brunswick Railway Company, at the mouth of the Clearwater, Taxis River. This is said to have been started by a farmer while clearing a section of his land. Another fire was reported from Smith & Dalton's mill at Rollingham, Charlotte County. Fires were also reported on the Blue Bell track and at Three Brooks, Tobique. Six prosecutions for setting fires are to take place on the Tobique and three in Madawaska.

Hawkins sawmill on the Nashwaaksis had a narrow escape from being burned down recently. In the dead of night the watchman noticed a blaze among some sawdust inside the engine room and around the outside of the furnace and he immediately sounded an alarm. Fortunately the mill is supplied with good fire protection and the blaze was extinguished before any great damage was done.

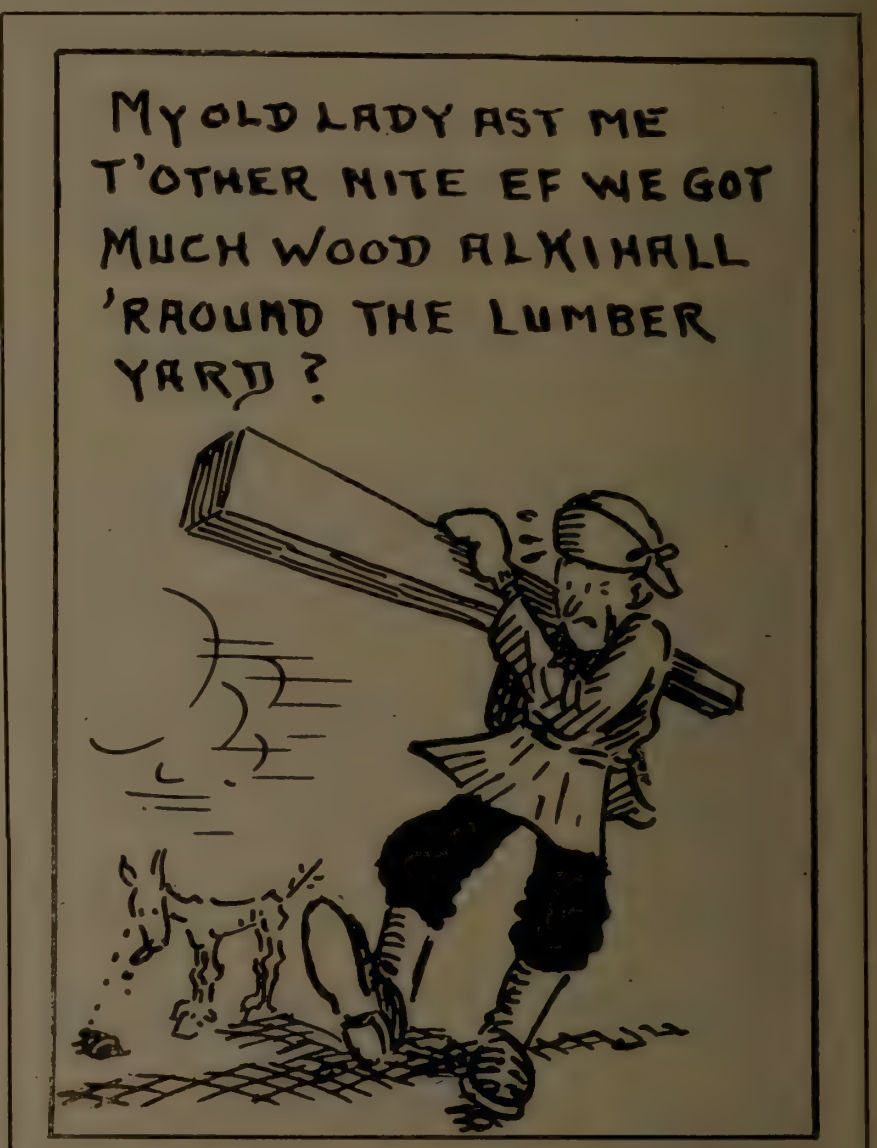
The formal transfer of the Dominion Company's plant and properties to the Fraser Companies Limited took place a few days ago. It is said that a cheque for between $1,000,000 and $1,250,000 was handed over to the British interests. The Dominion mill is situated on the Miramichi river and is known as an easy bleaching sulphite mill. It has a capacity of fifty tons a day. The timber limits being transferred are largely areas under license from the Department of Lands and Mines and consist of about 288 square miles of Crown timber lands. However, it is believed that the source of supply for raw material, which the Frasers are depending on largely for their new plant is the Miramichi portion of the 1,580,000 acres of timber limits they are acquiring from the New Brunswick Railway Company. The Dominion mill will be the second pulp plant operated by the Fraser Companies, their other being at Edmundston, which has a capacity of 110 to 118 tons daily. They also operate ten band saw lumber mills, most of which have shingle mills in connection.

Change Has Come Over Lumber Yard

Time was, not so long ago, when a retail lumber yard was a thing of utility, indeed of necessity, but by no stretch of the imagination could it be called a thing of beauty, desirability or even "tolerability"—if there is such a word—in the neighborhood one happened to live in, says M. E. Bascom in the May edition of "Business." People avoided the yard as much as possible, disliking to walk past it, even on the other side of the street. Its high board fence, generally sagging and slatternly, gave a forbidding look to the whole block, and the sidewalk was usually unclean and in winter covered with ice or snow. It was about the ugliest place in town, and with the exception of a few school boys for whom it held a mysterious fascination, no one ever went near it who could possibly help it.

But a change has come over the lumber yard. It has perked up with a brand new, freshly-painted fence—green mostly—with a neat, clean, well-built office with display windows, sometimes with gay flower boxes, and always with a cheery, clean, homelike reception room where one can sit in comfort and examine samples of hardwood flooring, fancy doors and the like, and plans and pictures of handsome little bungalows and cowsheds and granaries and self-feeders and so on.

The yard itself has changed no less. The long aisles of dirty, slipshod lumber piles have straightened up; have got under cover, in fact, and are no longer dirty or weather-beaten, but shiny yellow and



MY OLD LADY AST ME T'OTHER NITE EF WE GOT MUCH WOOD ALKIHALL 'RAOUND THE LUMBER YARD ?
We haven't much of the aforesaid article on hand, but we can fix you up with most anything else in the line of wood. Talk over your building plans with us. We can show you some kinks that will save you money.
HOME LUMBER CO.

A humorous advertisement in the line of wood product

fragrant, just as they came from the mill—all because they have a roof over them and a water-proof foundation under them. And a lot of other things have come to pass which make the retail yard at last a real asset to a community—actually a thing of beauty.

And what has brought this about? The answer is, as in so many cases of industrial rejuvenation—woman.

If some years ago you had suggested to the lumberman that he do something to make his yard attractive to women customers, he would have laughed and spoken somewhat in this wise: "I suppose you want me to tie pink and blue bows on my boards and put a flower pot on each lumber pile? How about lace curtains at the office windows and some bead portieres strung up between the lumber piles? No, we don't want no women coming around here. What do women know about lumber, anyway?"

EDGINGS

Ontario

The John McChesney sawmill on the Mattagami River, which was destroyed by fire recently, is being rebuilt.

The sawmill of Albert, Marsh, of Arden, Ont., was recently wiped out by fire of an unknown origin. The mill will be rebuilt as it was an important industry in a large section of the district. There was no insurance on the plant.

The Ontario Paper Co. are installing a large new machine in their plant at Thorold, Ont., and are putting up a new fireproof roof on the main building to take the place of the old asphalt one. The company have also moved into their new office building.

The sawmill of Thomas Brisbane, located at Yelverton, Ont., was recently destroyed by fire and several thousand feet of lumber also went up in smoke. The cause of the blaze is unknown but it is presumed to have started by a spark from the fire box.

Canadian Paperboard Co., Limited, Toronto, was recently incorporated to manufacture and deal in lumber, pulpwood, paperboard and all kinds of forest products. The capital stock is $5,000,000. H. H. Davis and J. S. Beatty, of Toronto, are two of the incorporators.

Originating among some lumber in the stable on the premises of the Ontario Wrecking & Construction Company, 1348 Dufferin Street, Toronto, fire caused damage to the company's building and contents estimated at $5,000. The flames spread rapidly owing to the nature of the material.

The Howard Smith Paper Mills, of Montreal, are increasing the sulphite pulp capacity of their plant at Cornwall, Ont., to 60 tons a day, all of which will be bleached. The company are also installing an additional paper machine at their Crabtree Mills division in the province of Quebec.

Dredging for Section 5 of the Welland Ship Canal has rendered the water of the Lake Erie level of the present cancel so roily that it is interfering with the production of a number of the paper mills along the waterway. One company last week had a $10,000 shipment thrown back on its hands as a result of the unfilterable sediment.

The Continental Paper & Bag Co., Montreal, are erecting a new mill at Agate in the district of Algoma which is being fitted with the following Waterous equipment: Log haul up; circular saw frame; carriage with independent friction feed; edger; trimmer; swing saw; sorting table, together with necessary live rolls, conveyors, transfers,, and counters.

The Spanish River Pulp & Paper Mills, Limited, Sault Ste. Marie, Ont., are adding a new paper machine to their Sturgeon Falls mill. Several months will be required to instal this new machine and, with this equipment in operation, the company's capacity will be about 650 tons, distributed as follows: Sturgeon Falls, 175 tons; Espanola, 225 tons; Sault Ste. Marie, 250 tons.

The sawmill formerly owned by the Tudhope Lumber Co., Elk Lake, Ont., was destroyed by fire. The Tudhope Lumber Co. went into liquidation some years ago and the mill was owned by some Toronto parties who had foreclosed a mortgage on it and was leased to a man named Grant. The loss will amount to about $6,000 and it is not likely that the mill will be rebuilt.

In connection with the delivery of all orders in Toronto, the R. Laidlaw Lumber Co. have attached the following slip to their bills: "Owing to the high cost of delivery, we request you to see that our teamster is not delayed longer than is necessary to dump his load on the street in front of your premises. You are expected to furnish sufficient help to unload promptly and to take care of trim, sash, doors, etc."

The agreement between the town of Kenora and the interests headed by E. W. Backus regarding the sale of municipal power to the company for $33,500 and the location of pulp and paper mills at Kenora has been approved and signed by Mr. Backus. The differences have all been arranged and the agreement will now receive the sanction of the City Council of Kenora for submission to a vote of the ratepayers at an early date.

The Kaministiqua Pulp & Paper Co., with a capitalization of one million dollars and composed principally of Toronto people, has leased 16 acres from the Port Arthur Parks Board in the north and industrial section of the city, and will proceed at once with the erection of a 30-ton per day ground wood pulp mill. C. D. Howe has been engaged as engineer in charge. Mr. Howe was in charge of the erection of a number of the large elevators recently and also of the repair work on the big Government plant at Port Colborne.

Arthur Beattie, employed as a foreman in the Ontario Paper Mills at Thorold, died recently as a result of injuries received in a mysterious manner at the plant. He was found lying on the cement floor of the shipping platform and never regained consciousness. It was at first thought robbery was at the bottom of the mystery but as the dead man's money was all found in his pockets, this theory has been exploded. Mr. Beattie was 50 years of age and leaves a wife and six children.

Evidence in the Hamilton Lumber Company's action against a number of Hamilton, Ont., citizens, whom the company alleges subscribed for stock in the company and then failed to pay for the allotted number of shares, is being heard by Judge Gauld. Recently the claim against M. D. Nelligan, who was asked by the company to pay for 500 shares, was dismissed. It was shown by the defendant that he had only subscribed for 400 shares, and had paid in full for those and had received his stock certificate. The 500 shares, the company alleged, were in addition to the paid-up stock.

Judge Gauld, of Hamilton, has given judgment in the matter of Consumers Lumber Company, of Hamilton, against the trustees of S.S. No. 7, Barton, and William Watson and Fred Warrer, contractors. His Honor has found that the Consumers' Lumber Company should rank as lien holders against the property, but are not entitled to any priority over the other liens. William Watson is, according to the judgment, entitled to $585 for

extras and security to lien holders, also ten per cent. interest. The trustees are authorized to hold $6,000 for the other liens. The contract was for $44,000, of this $38,000 has already been expended by the board.

Eastern Canada

The sawmill of Joseph Cote, St. Joachim, P. Q., was recently damaged by fire.

Alf. Baril is rebuilding the sawmill and sash and door factory at Shawinigan Falls, Que.

Joseph Lefrancois Co., Limited, Quebec, lumber dealers, etc., recently suffered a fire loss.

Fraser Bros., Edmundston, N. B., have awarded contracts for the construction of new sawmills.

Henry Holgate, of Montreal, recently exported to Jamaica a complete portable Waterous sawmill.

Fire did considerable damage to the sawmill and lumber stocks of Price Bros. & Co,, Limited, Montmagny, P. Q.

Kemptville Steam Sawmill Co., Kemptville, N. S., intend rebuilding the sawmill which was recently destroyed by fire as soon as the season's cut is completed.

Aime Ally, Grand'Mere, P. Q., is erecting a saw and planing mill. The building will be 1½ storeys high, 80 x 30, and of brick and frame construction, to cost $12,000.

The Rolland Lumber Co., Limited, Montreal, Que., was recently granted a federal charter to operate sawmills and planing mills and to conduct a general lumber business in all its branches. Capital $50,000.

Clarke Brothers Paper Mills, Limited, Bear River, N. S., was recently incorporated to conduct a general business as saw-millers, lumbermen, pulp and paper manufacturers, and other lines of forest products. Capital $5,000,000.

The Belgo Paper Co., Limited, Montreal, Que, have been incorporated to manufacture and deal in lumber, timber, pulp and other forest products. Capital $20,000,000. Two of the incorporators are A. R. Holden, K.C., and C. G. Heward, advocate, both of Montreal.

The town of St. Quentin, N. B., was recently visited by a disastrous fire and the following firms suffered heavy losses: E. C. Frost, sawmill and lumber manufacturer; Lynch & Fournier, lumber dealers; J. E. Michaud, sawmill and lumber; Chas. Roy & Co., sash and door factory and sawmill.

A partnership known as the New Brunswick Pulp & Lumber Co., Eel River, N. B., was lately formed to conduct a general lumber business dealing in logs, lumber and other forest products. J. L. Wootten, of Cookshire, Que, and F. R. Cromwell, of Crompton, Que., are the incorporators.

P. T. Dodge, president, G. F. Underwood and Mr. Reilly, of the International Paper Company, passed through Montreal, recently, on their way to Three Rivers, to look over the company's plant now under construction there. This plant is to turn out 80 tons of sulphite per day, beginning this Fall.

The saw mill and a large quantity of lumber belonging to the Montreal Harbor Commissioners, on Bickerdike Pier, have been destroyed by fire recently. The fire, according to the fire department report, originated in the ceiling of the lumber shed from sparks coming from the furnace, which was being put under steam for the day, and spread rapidly.

The Society of Northeastern Foresters comprising the best known men in the profession in the United States, university professors, and foresters employed by the United States Government, certain states and some railways, will visit the Laurentide Company nursery at Proulx, Que., and look over the forestry operations of the company for three days, beginning July 27th.

Major David T. Mason, of the Timber Section of the Bureau of International Revenue of Washington, D. C., and A. T. Rothery, forest engineer of New York, were in Fredericton, N. B., recently. They were travelling through the province looking into the administration of timber lands and also investigating timber lands owned by American capitalists for the purpose of taxation in the United States.

Western Canada

The Kaukawa Lumber Co., Limited, Hope, B. C., was recently incorporated to manufacture and deal in lumber and lumber products. Capital $25,000.

The Webber Lumber Co. are now cutting at Webster's Corners, B. C., the output being 25,000 ft. a day. The mill is a modern one and operated by electricity. A shingle mill has also started operations at Webster's Corners.

Several large tracts of cedar timber in the Pemberton Meadow district has been acquired by Mr. Stewart and his associates from North Vancouver. They have purchased the mill site on Lillooet Lake where the logs can be floated.

The British Columbia Spruce Mills will construct a large sawmill and planing mill at Wattsburg, B. C. The plants will be the largest in the interior of British Columbia and the cutting capacity will be 250,000 ft. per day. Building operations are now in progress.

Fanned by a gale, a bush fire broke out in the limits of the O'Neil, Irvine & Mann Lumber Co., on Boulder Creek, B. C., in the Salmon Valley, and wiped out Camp No. 3 of Rigg & Wilder, the contractors, who are operating the company's mill, destroying one million feet of logs skidded.

The White Rock Tie & Lumber Co., Ltd., at White Rock, B. C., is ready for operation. The plant will handle dimension timbers, ties, shiplap and lumber. The company lost no time after organization in getting construction advanced. A mill equipped to turn out 20,000 feet per day of finished lumber has been installed.

British Columbia lumbermen are again considering the idea of shipping lumber to Britain in the form of huge rafts. Raftanutes or ocean-going rafts are now being used by the Norwegian lumbermen to place their product on the British market. These are constructed of about 5,000,000 ft. of lumber. Wm. Oleson, a Swedish expert, who has had considerable experience in constructing timber rafts, believes that it is quite feasible to ship lumber from British Columbia in this way, and considers that rafts containing from 15,000,000 to 20,000,000 ft. could be constructed and piloted across the ocean without running any undue risks of heavy loss.

GOODYEAR
MADE IN CANADA
KLINGTITE BELT

(The New Name of EXTRA POWER BELT)

World-Wide Demand for Goodyear's Quality of Belting and Hose Makes Advisable Some Changes in Brand Names

Example — GOODYEAR { *formerly* —"Extra Power / *now* —"Klingtite"

THE most widely known belting in Canada to-day is "Extra Power."

Now you will buy this same belting as Goodyear Klingtite belting—"Klingtite" — a name adaptable to world-wide use.

In our Sales messages you will read of Goodyear Klingtite instead of Goodyear Extra Power.

Our belting men will talk to you of Goodyear Klingtite instead of "Extra Power."
The familiar brand names of Goodyear belting, hose and packing have been changed so that each of these products may be called by the same name in Australia, Europe, South Africa, India, Japan, China and other countries, as in Canada.

The new brand names are such that they can be used and understood in practically every language and country without change.

Some of the former names designed and reserved for Canadian use do not lend themselves to the complication of languages and conditions prevailing in some of these foreign countries.
Goodyear Belting, Hose and Packing, made in Canada, have become products of world-wide sales.

You will welcome the development of this phase of our business because it means the building up in Canada of another world-wide manufactory. It means increased demand and prosperity for Canadian workers. It means economy and service for you.

Particularly to you, it means that efficient engineers and factory superintendents the world over endorse your choice when you secure belting, hose and packing for your plant. Phone, wire or write the nearest Goodyear branch for a man trained by Goodyear in belting, hose and packing problems to call on you. No obligation.

Kendall Gang Circular

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows one of the latest designs of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it necessary saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 7 to 10 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true to size from end to end, and so smooth that 1/16 in. over size is all the allowance necessary for finish.

Read what one user says about it:—

"The machine has given every satisfaction and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me $1.00 to $1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere—this advantage being purely on account of the uniform and smooth sawing this saw is capable of doing."

We are the original manufacturers of these machines

We have been manufacturing them for the past fourteen years, and the experience gained in all those years is at your disposal. We make these machines in three sizes, as follows, using

26-in. saws for 8-in. cants, as illustrated.
32-in. saws for 10-in. cants.
36-in. saws for 12-in. cants.

Each size is of the very latest design and up-to-date in every improvement.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "Rotex"

HURLBURT

Motor Trucks

Come First

This is the verdict of users who have tried them out by years of constant heavy work; and by comparison with other makes.

The idea behind the build of every Hurlburt Truck is the best that money and brains can produce regardless of cost. That idea has been realized in actual performance.

No lumberman should buy a truck without first knowing the specifications of the Hurlburt.

The Cook Knows KLIM

He knows that with Klim he can add a wonderful variety of appetizing and nourishing dishes to the camp menu. He knows that the real milk flavor of Klim will give that home taste to pies, puddings, and many other dishes all men long for.

In isolated camps where hardships are many and comforts few, the "Grub" looms big. Allow the cook an ample supply of Klim and you are assured of "Better Food" and happy, contented men.

Klim is pure powdered separated milk. Simply whip it into water in the proportions given in the directions and the result is pure liquid milk as fresh and sweet as when it left the dairy.

Klim will neither sour nor freeze. It is light, compact, and easily transported.

Only by using Klim can you know its genuine milk flavor and convenience. Order your supply now in 10 pound tins—six to the case—from your Supply House or direct from us for shipment through any jobber you may name.

DUPLEX TRUCKS
BUILT FOR BUSINESS

Careless Truck Buying Makes Transportation Cost Too Much!

The Truck is a Piece of Business Machinery. It Should Represent the Most Economical Method for Doing Its Particular Job. Buy Your Truck on That Basis—And It Will Be a Good Investment

RISING costs and the shrinking value of the dollar to a large extent can be offset by *intelligent buying*.

A steadily increasing number of business men are *getting* the facts and then *buying* their trucks on the basis of the facts.

There are many good trucks on the market. But value in a truck, very much like character in a man, isn't always completely revealed by what the eye can see.

Back of every Duplex Truck are *Fundamental Principles*—of design and of construction—factors that result in the *remarkable degree of service value in Duplex trucks for the man who buys.*

There is Nothing Somebody Else Can Do to Save a Man from Paying the Price of His Own Limitation or His Own Carelessness

Look in the used car columns of your local paper. Note the number and makes of trucks offered for sale and *think about* all the reasons.

In one day in three cities 324 different used trucks were listed for sale—and not one Duplex among them.

Are these trucks for sale because they were not bought right?

There is something significant here when you stop to analyze it.

Why is this tendency to standardize on Duplex so noticeable of late years?

The answer is very likely that trucks are *more and more being bought on the business basis of service delivered and what the service costs over a period of years.*

This is a Time for Intelligent Buying

A truck is just as much a piece of business equipment as any other piece of machinery. Its value is in *what it does and how cheaply it does it.*

Transportation is a necessary part of every business.

A truck gives a business man transportation facilities—at a high or a low price. *It depends on the fitness of the truck for its job.*

Now take a man who buys a truck for his business without getting all the facts first. Later he discovers that his truck is not as economical as it should be. He sells it at a sacrifice and gets another—and so on. Finally he buys the truck he should have selected the first time.

What is the result?

He pays too much for his transportation. His costs for trucking are not right.

The Duplex Users of Today Are Probably the Most Intelligent Buyers and Users of Trucks in America

Think of this—ninety per cent of the Duplex dealers have been distributing Duplex Trucks ever since this company was first organized.

What does this signify? It shows for one thing that their customers have found the Duplex Truck to be a successful truck for them.

The great significance of all this is that *Duplex users stay Duplex users.* Many of them had tried out five or six different makes of trucks before they got their first Duplex.

The whole history of this business shows that when a man buys his first Duplex it is only a little while until *he standardizes* on Duplex.

Get the Facts for Yourself

We have hundreds of letters from users in our offices that show some very remarkable facts. They are not edited. The letters stand just as they were written.

If you are a truck user and want to read these letters write us and we will send them to you for your private perusal. For ethical reasons we do not care to publish them.

What Do You Think?

Duplex 4-Wheel Drive

Many companies in the heavy duty fields say that the Duplex 4-Wheel Drive is the only successful truck they ever owned.

If your kind of work has proved too much for the ordinary truck—you will find that the Duplex dealer near you can give you some really interesting *facts*.

Many owners still seem to be using the *wrong kind* of trucks. Get the Duplex facts.

DUPLEX BUILT FOR BUSINESS

The Duplex Limited

Thoughtful men have entire confidence in the Duplex Limited—feeling that this *high speed* Duplex is a safe investment because of the fact that it *is* a Duplex.

Medium capacity—Pneumatic Tired—Two-Wheel Drive—Full Electrical Equipment—here is a Speed Truck that *lasts*. Strong, rugged, mechanically and constructively *right*—it handles as easily and smoothly as a passenger car—and at a minimum upkeep.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

PORT HOPE - ONTARIO

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

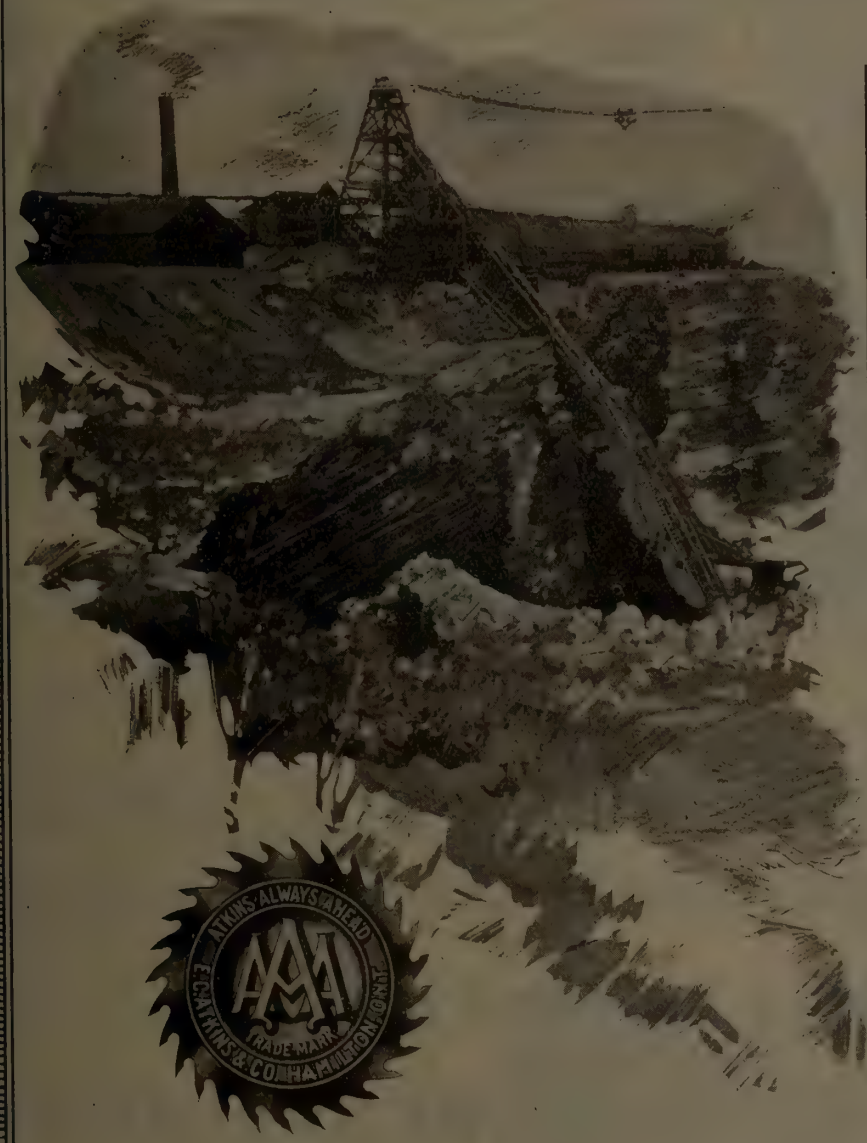
ATKINS STERLING QUALITY SAWS



VIRGIN ORE

When Elias C. Atkins began making saws 'way back in 1857 he realized that no steel manufacturer had at that time the correct formula for making as high a grade of steel as he determined to use in *his* saws.

Being an expert metallurgist he prepared his formula, which was based on Virgin Ore This formula contained many important elements that stamped it as the best that had ever been used. Experiments were carried on day by day and month after month, and after a long interval success was achieved—thus "Sterling Quality" saws were born.

This steel—*Atkins exclusive formula*—has the quality of receiving a hard, tough temper, stiff and firm; a quality that takes a keen, sharp cutting edge—a quality as fine as the material in high grade razors—that's "Sterling Quality" and it's not too good for Atkins Saws.

"Sterling Quality" Saws—made from Virgin Ore—are known the world over, and the constantly growing demand demonstrates their quality.

Have you Atkins Saws?
Write for literature!

QUESTION No. 10

Why is it

that so few users of babbitt, give so little consideration to the alloying of the metal!

Content is, of course, an important factor in the manufacture of a babbitt, but surely no more so than the alloying. For, a babbitt that is not properly alloyed may lack homogeneity and be the cause of the babbitt squashing or creeping out; or it may contain hard-points that will score the shaft.

In the manufacture of SYRACUSE BABBITTS we alloy **scientifically** and with **exacting care**, assuring a babbitt absolutely homogeneous and free from hard-points.

For your very severest requirements, such as in your gangs, you should use

ALUMINUM GENUINE BABBITT

the babbitt of super-strength—the babbitt that has for years been peer in the lumber industry. Write for a sample.

THE E. LONG MANUFACTURING CO. SAW MILL MACHINERY ORILLIA CANADA

For the Profitable Output of Lath and Pickets

The No. 3 Lath Machine pictured above is undoubtedly the most popular in use in Canada today. As a money maker it has made a name for itself in many of the largest lath mills of the Dominion. In selecting it for your mill you will obtain a machine capable of maximum production free from breakdowns and frequent repairs.

In Big Mills Everywhere in Canada

In Canadian mills where quality and quantity are equally important, Waterous Sawmill Equipment is used as a matter of course.

WATEROUS SAWMILL MACHINERY

As an example, the Spanish Mills Lumber Co., of Cutler, Ont., are using two Waterous 8 ft. New Model Bandmills for handling their daily cut of 125,000 feet in ten hours. More than fifty other large Canadian mills have installed these machines within the past five years.

One of them writes:

"We have sawed 20,000,000 feet this past season—our logs run about 40 to the thousand—and have not broken or cracked a saw."

Only good equipment will show a record like this.

Remember, we build everything for the sawmill. Whether you are running a portable outfit or are cutting 150,000 feet a day, Waterous Equipment is the best for your work.

It Lasts Longer if "Waterous-built."

MOLSONS BANK BUILDING, VANCOUVER, B. C

WINNIPEG, MANITOBA

Waterous

BRANTFORD, ONTARIO, CANADA

Here's Another Letter

Vinton, Que., May 25th, 1920.

McLean Machine Works,
Campbell's Bay, Que.

Dear Sirs:—

Having had fifteen years' experience as sawyer and used several makes of feed works, I must say the feed purchased from you is the easiest operated and without any special attention, giving excellent satisfaction in every way.

I would not use any other, and I recommend your feed works to any who are desirous of securing a feed that gives satisfaction.

We are sawing from 18 to 20 thousand feet per day, and are running 6½ inch feed and 15 gig without any trouble whatever.

THE O. A. LETTS LUMBER CO.,
Per O. A. Letts, Sect. Mgr.

FULL PARTICULARS ON REQUEST.

THE MACLEAN MACHINE WORKS, Campbell's Bay, Que.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

Specialists in LUMBER and WOODWORKING Plants

HEAD OFFICE: OTTAWA, ONT.

A Fast Feed Matcher Head scientifically designed for matching from 200 to 300 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

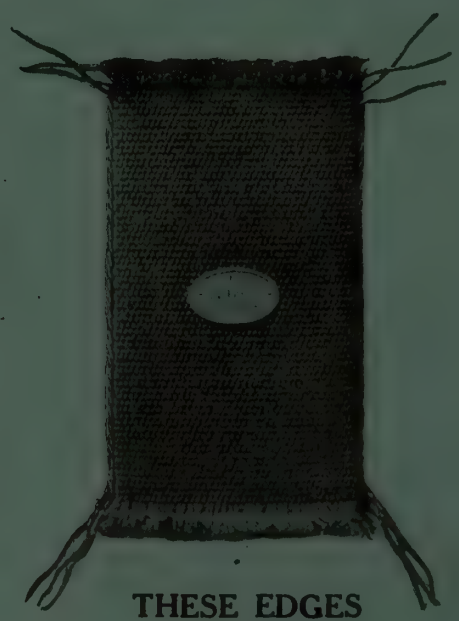
The Last Word in Belting Efficiency

"Gripoly"—a British product, made in a special factory under exacting conditions, sets a new standard as a belting product.

It is constructed to meet the severest tests of friction, strain, general wear and tear, and the many agencies, usually destructive of belting. Its indestructible edges resist every form of friction to which the belt is subjected, and is therefore proof against fraying.

It is impervious to acid, steam or changes of temperature and is absolutely waterproof.

The manner in which it "Grips the Pulleys" and the fact that it is stretchless means that not an atom of power from the pulleys is ever lost. The opinions of not only its makers, but of its users would testify that "Gripoly" is the last word in Belting efficiency.



THESE EDGES
are composed of indestructible strands interwoven with the solid body of the belt.

"Gripoly" is the ideal transmission belt for the lumber mills. No matter how long the drive or how great the strain "Gripoly" belting can give you a better, more continuous and more economical service than you are now getting. Are you interested?

Worth Repeating—

The car shortage is growing more serious each week.

The actual net shortage increased 28 per cent. from the second week in May to June 8th.

You should put your stock in good shape before the grain moving begins, which according to early reports will require all available box cars to handle.

Every Minute of Every Day Service—Satisfaction

Broad Claims? Indeed! And we fully realize what responsibility we shoulder by making such claims.

That is why we constantly strive to give just a little better service and satisfaction than is ordinarily given. And that is why our customers say they like our way of doing business.

We will welcome your inquiries in regard to any of the items listed below as an opportunity to show you what our Service and Satisfaction policy mean.

FENCE POSTS That CONFER A COMMUNITY Benefit

The dealer who passes out to his trade a good, serviceable, economical article that fills a real want has done something more than merely sell goods. He has conferred a genuine benefit upon his customer and his community.

This is certainly true of retail lumbermen who sell Long-Bell Creosoted Fence Posts bearing this trade-mark brand.

NOTE – We supply advertising cuts and lantern slides free to dealers in Long-Bell products. The cut reproduced on this page is one of a series available for that purpose. Write our Advertising Department.

It is not difficult to convince the farmer that a wooden fence post which cannot decay and will stand straight and sturdy for a life-time is the most economical fence post he can buy. Once started in a community Long-Bell posts sell rapidly for they strikingly demonstrate themselves as a neat and permanent addition to any place. We can supply them in full round, sawed halves and sawed quarters in suitable sizes and lengths.

It Is Not Done!

Advertising the merits of one car of lumber is not usual but we have ready for immediate shipment one of the finest cars of four quarter QUARTER SAWN WHITE OAK ever come over the saw in years.

This stock is dry, plump, well manufactured and shows a good figure. The widths are unusually wide, from 10 INCHES TO ABOUT 19 INCHES WIDE, averaging, we would estimate, about 13 inches wide, and the lengths would run about 75% 16 foot, 10% 14 foot, and the balance largely 12 foot lengths.

The quality is strictly FIRST AND SECONDS, National Hardwood Lumber Association grading.

If you want something real choice buy this car from

Before the Freight Increase

The freight congestion is getting worse every day, as rolling stocks decrease and demand for freight cars increase. Soon farm districts will ask more cars to move the crops. Then the real difficulty will come.

Merchants who have not yet provided for ample stocks to carry them over that period, will suffer heavily from lost sales. There will be no rush delivery available at that time. Provide for this contingency now by laying sufficient supplies till December.

If your stocks are low in any ofthe following lines, replenish them at the attractive prices, quoted below :

Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications;—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	Width
41 Front Gear	1¼" square	4 x ½	26	.....	.....
42 Hind Gear	1¼" square	4 x ½	42	5 feet	40 inches

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40 Toronto, August 1, 1920 No. 15

No Exploitation of Public Domain

Performance is preferable to promise. Practice is better than theory and results count for more than remarks. The field of exploitation and promotion has always been crowded; the number who undertake and carry out definite plans and implement pledges are comparatively few.

It is estimated that there are on the licensed Crown lands of Ontario 85,000,000 cords of pulpwood and on unlicensed Crown lands 140,000,000 cords, while on privately-owned property there are 25,000,000 cords, making the total wealth of the province 250,000,000 cords, but only 145,000,000 cords are, according to the best authorities, commercially accessible to existing transportation. This can again be reduced by one-third after deductions are made for waste and losses in logging and driving, for merchantable material left uncut, etc. It is stated that in Ontario the cut in 1918 was 1,116,000 cords, which include quantities consumed or manufactured in the province, as well as exported.

The ascending price of pulpwood, the bright future of the paper industry and the large returns which are now being reaped by all enterprises in this line, have resulted in various individuals and companies seeking to get concessions from the government and in return obligating themselves to carry out industrial enterprises. In February, 1917, the Black Sturgeon River pulpwood limit in the district of Thunder Bay, consisting of 1,000 square miles, was awarded by the Ontario Government to Sam Marks, of Nipigon, who agreed to pay 70c per cord for the wood in addition to the usual fees of 40c per cord for spruce and 20c for other pulpwood. It is understood that this berth some time ago passed into the hands of J. J. Carrick, ex-M.P.P., of Port Arthur, who in December, 1916, was granted the Thunder Bay concession consisting of 1400 square miles, his tender being at 50c for each cord of pulpwood, plus the usual fees. The Spruce Falls Pulp & Paper Company was a year later successful in securing the Kapuskasing River limit, which comprises 1740 square miles in the districts of Temiskaming and Algoma, covering two blocks of land north and south of the Transcontinental Railway. The bid was the highest of any up to that time, a new policy being inaugurated. The company agreed to pay a flat rate of 75c a cord on all kinds of pulpwood (in addition to the usual fees), while for red and white pine the figure was $15 per M. feet. Messrs. Marks, Carrick and the Spruce Falls Company were each to spend $1,000,000 within three years in the erection of groundwood pulp plants, in order to convert the raw material into the finished or semi-finished product and afford employment to many residents of northern portions of Ontario. Recent events have demonstrated that the Spruce Falls Co., which was the last concern to obtain pulpwood concessions from the provincial authorities, means business and is proceeding at once with the erection of a 150-ton pulp plant and a newsprint enterprise of equal capacity. It is understood that extensions were granted Mr. Carrick from time to time owing to complications regarding the hydro-power situation, the control of water-falls, the exigencies created by the war and other causes. These have all passed away, the atmosphere has been cleared and so far as can be learned not one dollar has been spent by him in actual construction work.

There have been many reports emanating from Port Arthur that big plants were to be constructed here and there and that Mr. Carrick was behind them, but all the propositions have apparently got no further than newspaper talk. Now another application is being made to the provincial authorities by interests headed by E. W. Backus, of the Fort Frances Pulp & Paper Co. In 1914 he was awarded the Lake-of-the-Woods limit of 1,860 square miles, upon which a mill was to have been erected according to the terms of the covenant. Not one step has been put forth to build such a structure or carry out the conditions of the contract, yet on top of this Mr. Backus is applying to the Department of Lands & Mines for the English River concession, consisting of 2,500 acres, in order that he may erect a pulp and paper plant at Kenora. It is announced that the application has not been granted and whether it will be or not, it is difficult to foretell.

This brings up the whole question of men who have valuable timber privileges from the Ontario government and agree to erect large enterprises within a stated period of time to convert the pulpwood into the finished material, yet do nothing in this direction but hold their rights for speculative or promotion purposes. It is high time that these agreements were rescinded and awards made to organizations who mean business and will assist in the industrial development of the north. The Drury government has an opportunity to demonstrate its worth and determination by seeing that those who have concessions are made to comply with the conditions. While there may have been some contributing causes during the war for delay or evasion of performance, these have now been removed and th public domain should not be the nursery of stock-promotion or get-rich-quick propositions. What Ontario needs—and what the authorities at Queen's Park should rigidly enforce—is that the long projected mills to be erected by Mr. Carrick, Mr. Backus and others should be constructed at once or the rights which these representatives now hold should be annulled and the hundreds of square miles of valuable pulpwood and other timber handed over to those who will fulfill the conditions imposed. We need men who mean business and have at heart the welfare and prosperity of the community, more than their own individual interests or those of a few select friends. The present is a time for action and performance, not bluff or blather.

Work That Lacks Proper Appreciation

The Tenth Anniversary or Decennial Celebration of the Forest Products Laboratory of the United States has just been observed at Madison, Wis., by appropriate ceremony and delightful association. The programme carried out was extensive and called attention to the work and worth of this institution which has made a name for itself in industrial ranks and research circles all over the continent.

Lest someone should forget the fact, there is in Canada a Forest

Products Laboratory, which is located in Montreal. It is well equipped mechanically, but the plant is lying idle at the present time owing to many resignations that have taken place from the staff. The federal authorities do not pay salaries sufficiently attractive to induce permanency of position. The result is that industrial concerns reaching out for technically-trained men offer inducements to those associated with the laboratories, which, in justice to themselves, the members cannot decline.

To recall the number of thoroughly competent and talented men who have left the institution during the past three or four years, would only be revealing a "casualty list" so far as the record of the Forest Products Laboratory is concerned. Various ways and means have been suggested to overcome the present situation and make the institution the force and factor that it was intended to be at its inception. The work which has been carried on in timber mechanics, wood preservation, timber physics, industrial investigation, laboratory operation, pulp and paper researches. etc., has been referred to time and time again, and to dwell further upon these features would be rehearsing a tale oft told.

The lumber industry and the pulp and paper industry are equally concerned in the maintenance and efficiency of the institution, and unless it is properly manned and continuity of service assured—which state of affairs can only be brought about by greater generosity and appreciation on the part of the government—there is little doubt but that matters will go from bad to worse. The timber age is coming, not going, as many suppose, and the supplies of wood resources of America are being used four times faster than they are being grown or replaced. The work conducted by the Forest Products Laboratory is how to make the most of the existing situation and cause the present supply to last longer.

The elimination or utiliation of waste is only one phase of the great work that is being carried out. Ample funds must be provided in order that the best results may be secured. As long as there is a procession of trained and talented men in and out of the laboratory to take more remunerative posts with progressive industrial concerns, so long will the work at Montreal suffer.

The whole plan is too valuable and important to go on as it has for some years now. It is a time for action. During the few years that the laboratory has been in existence it has done splendid work and revealed improved methods and processes for the better utilization of forest products and for the direct assistance of industries concerned. The operations carried on at Madison have been, to a certain extent, paralleled in Montreal, and, while different phases have received attention, there is, probably, no activity which has been of greater significance than the investigations and experiments having to do with pulp and paper. These include a study of processes in the manufacture of paper pulp, the suitability of various woods for the manufacture of wood pulp. utilization of by-products and wastes, and extension of the use of wood pulp. The importance of utilizing waste from lumbering and milling operations is more apparent when it is realized that at present this waste amounts to more than the total wood requirements of the pulp and paper industry.

Some Editorial Short Lengths

New stumpage rates are to be announced by the Government of New Brunswick before August 1 for lumber to be cut upon the Crown lands in the ensuing year. It is expected that there will be an advance from $3.50 per thousand, on spruce, up to $5, the latter being the amount which was mentioned at the last session of the Legislature.

* * *

The need for international co-operation between Canada and the United States, owing to the shortage of print paper will be discussed at the New England forestry conference to be held at Colby Academy August 24 to 26, it was announced recently. The speakers will include A. L. Dawe, Montreal, secretary of the Canadian Pulp and Paper Association, and Ellwood Wilson, forester of the Laurentide Company.

It may not be possible to make bricks from straw but, according to a western despatch, there is excellent prospect of pulp and even paper being made out of this material. The day of progress and achievement grows brighter with each succeeding year.

* * *

The increasing cost of administration has resulted in the Post Office Department looking around for more sources of revnue, and not only has the postage rate on newspapers been advanced, but it now costs 10c to register a letter or package instead of 5c, as formerly. Another abuse of the mailing privilege is about to be stopped, and that is the practice of members of respective Provincial Legislatures franking their correspondence when the House of Assembly are not in session. Up to the present members have enjoyed this concession, but now it has been cut off and M.P.P's. will pay postage on their letters the same as ordinary business people. The new order also applies to any printed matter of the various provincial governments, such as sessional reports, papers, etc.

* * *

Hon. L. A. Taschereau, who has been elected Premier of the Province of Quebec, in succession of Sir Lomer Gouin, in a recent message to the public said that his Government would seek means to increase the revenue from the forests of the Province of Quebec. "As far as I am concerned," he said, "I propose to continue, as far as possible, the policy inaugurated by Sir Lomer Gouin and predecessors, which have given such good results. Also I will devote myself to the full development of our forestry resources. of our mineral resources, and of our fisheries. The possibilities in these regards are enormous, and they should give to the province as much as can be obtained from these three branches. We have the finest forests in the world. We are leaders in the pulp and paper industry, and there is no reason why the province should not get from these sources a great deal more than in the past."

* * *

Great interest is being aroused in the fuel problem and various bodies are urging upon the federal government the necessity of more rapid development and exploitation of the coal mines of Canada, both in Nova Scotia and the western provinces. The Mattagami Pulp & Paper Co., whose plant is located at Smooth Rock Falls. Ont., some thirty-two miles west of Cochrane on the National Transcontinental Railway, recently secured an all-rail shipment of 2,000 tons of Nova Scotia coal for their sulphite pulp plant. It is stated that when delivered the cost, including freight, was about the same as Pennsylvania coal, plus duty, laid down at the same point. Many are of the opinion that if the duty on bituminous coal remains the Nova Scotia product can be shipped to southern Ontario at a profit, even by rail, and if all-water shipment can be arranged, the advantage would be decidedly in favor of the Maritime coal.

* * *

In a compilation of returns issued at Ottawa on the manufactures of Canada by groups of industries covering the year 1917, it is shown that food products stand first, textiles second, iron and steel products third, and timber and lumber and their re-manufactures, fourth. The number of such establishments in the Dominion is given as 4,463. Sawmills are placed at 2,879 and the remainder of the woodworking establishments are as follows: Artificial limbs and trusses 19, baskets 24, billiard tables 3, boxes, sigar 8; boxes, wooden, 101; coffins and caskets, 25; cooperage, 110; cork, 11; furniture and upholstered goods, 247; lasts and pegs, 8; lumber products, 753; matches, 3; picture frames, 37; pumps and windmills, 63; refrigerators, 11; shooks, box, 5; showcases, 17; wickerware, 12; woodenware, 8; woodpulp, 34; woodworking and turning, 75; all other industries, 10. The total capital invested was $289,169,396, the number of persons on salaries, 6,823, with a total salary earning of $9,689,896. Employees earning wages were 92,139, and the total wages for 1917 stood at $58,759,260. The cost of materials consumed in timber and lumber and their re-manufactures was $87,159,851, and the value of the products aggregated $225,522,189.

Lumbermen Disagree With Railway Officials

No Definite Decision Reached Regarding Car Weighing Regulations — Shippers Contend They Have Been Overcharged in Certain Instances

An important conference of lumber shippers and representatives of the railroad companies was held on July 20th, at the offices of the Canadian Freight Association, Toronto. The meeting was the result of a previous hearing before the Board of Railway Commissioners for Canada, on an application by the Wholesale Lumber Dealers' Association, Inc., in connection with matters relating chiefly to the weighing of cars and the estimated weights used by the railroad companies when they are unable to furnish weighing particulars. Tariff No. 14 of the C. F. A., which became effective on May 25th, deals with these matters and was made the ground of the application. The Board heard evidence on a few of the matters at issue and recommended a conference between the parties interested before a second hearing should take place.

At the conference, the Wholesale Lumber Dealers Association, Inc., was represented by its transportation committee, consisting of Messrs. A. C. Manbert, D. C. Johnston and A. E. Clark, and the secretary. The railway companies' representatives present included G. C. Ransom, chairman of the Canadian Freight Association; H. E. Macdonell. Assistant Freight Traffic Manager of the C.P.R.; F. J. Watson, General Freight Agent of the Grand Trunk Railway; G. A. Fowler, Lumber Agent of the C.P.R.; J. Boyd, Chief Inspector of Weighing of the G.T.R.; I. F. Avard, Chief Inspector of Weighing of Canadian National Railways; W. Macklier, of Montreal, Chief Inspector of Weighing, I.C.R., and others.

The most important matter discussed was the application of the Wholesale Lumber Dealers Association, Inc., for an order of the Board to the effect that when a carload of lumber originates from, or passes by, a track scale, and the railway company is unable to furnish weighing particulars, the company shall be permitted to collect freight charges only on the minimum weight for the car used. The railway respresentatives expressed their opposition to this proposal, basing it chiefly upon the belief that it would be contrary to the express terms of the Railway Act. which requires that the railway companies must charge for the full weight carried. This objection did not impress the lumbermen to any extent and the railway representatives directed the balance of their discussion to a consideration of conditions now prevailing in connection with the operation of weigh scales. They stated that they were doing everything they could, by means of circular letters and surprise inspections, to get the local freight agents to weigh all cars, and they suggested that, if the lumbermen would report to the chief weighing inspectors all failures of the agents to furnish weighing particulars, it would assist the railroads in making their efforts more effective. They asserted also that they were now getting improved service from their employees, as the men were staying with them longer and taking their work more seriously. Altogether, with the co-operation of the shippers, they believed that they would be able to show much better results in future.

Furnishing Weighing Particulars

The lumbermen laid before the railway representatives as vigorously as possible the necessity for placing upon the railways the responsibility for furnishing weighing particulars or accepting payment on the minimum weight. Under present conditions, the failure of the railways to do the weighing or to enter the figures on the freight bill, placed upon the lumbermen the responsibility of accepting the estimated figures used by the railways or proving that they were wrong. The burden of proof and any penalty involved should be upon the railway companies. Mr. D. C. Johnston added a strong argument by pointing out that his company is largely engaged in the export trade and that the steamship companies used the figures furnished by the railway companies as the basis for steamship transportation charges. Whenever the figures used were estimates instead of actual weighing returns, there was a strong probability of the shippers being overcharged and the whole profit of the shipment being eaten up in incorrect ocean freight charges. He instanced a recent case where the estimated weights used by the railway company had been too large. This was in connection with a shipment for export, consisting of a large number of carloads. After much correspondence the railway company had at last been able to furnish weighing particulars on thirteen of the cars in question, showing weights greatly below those which they had estimated and a settlement had then been made on the basis of these thirteen cars. The use of estimated weights was clearly shown in this case to involve a serious loss to the shipper.

The upshot of the discussion on this point was that the two parties were not able to reach a mutually satisfactory agreeent, and it was passed over without the lumbermen announcing either approval or disapproval of the railway company's desire to let matters remain as they are in the hope that they may be able to improve the situation.

Question of Estimated Weights

The conference then took up the question of estimated weights. The weights, as published in tariff No. 14 of the C. F. A.. were gone over one at a time. In connection with hardwoods an agreement was reached that the weights to be used for dry lumber should be as follows:

Basswood	2,500	pounds	per	thousand	feet.
Black Ash	3200	"	"	"	"
Soft Elm	3000	"	"	"	"
Hard Maple	4000	"	"	"	"
Birch	4000	"	"	"	"

The weights for the other hardwoods were agreed upon as those in use by the National Hardwood Lumber Association.

In connection. with softwoods the lumbermen suggested the weights which they believed would be most in accordance with actual conditions. The railway representatives stated that they would continue their investigations into softwood weights and, when completed, would advise the lumbermen of the results, with a view to continuing the conference at a later date and drawing up a complete list.

New Position for Major Seaman

Major L. N. Seaman, Montreal

The Forest Products Laboratories of Canada, Montreal, will lose, in August, the services of Major L. N. Seaman, at presen Chief of the Division of Timber Tests, who has accepted the post of timber testing expert with the Forest Research Institute, Dehra Dun, United Provinces, India. This institute, finding a property of 45 acres too small, has procured a new property of 1,300 acres, and is erecting new buildings, and has secured the services of Major Seaman to organize and take charge of the timber testing laboratory which is to form part of the new establishment.

L. N. Seaman studied engineering at Acadia University and the Nova Scotia Technical College obtaining the degree of M. A. and B. Sc. and is an associate member of the Engineering Institute of Canada. He entered the service of the Forest Products Laboratories of Canada in 1914 as Assistant Chief of the Division of Timber Tests and co-operated with Mr. R. W. Sterns. B.Sc., then Chief of the Division of Timber Tests, in its organization and in the inauguration of the first comprehensive work in testing native timbers to be undertaken in Canada. His work at the Laboratories was interrupted during the war by active military service as a Captain in the Canadian Artillery, and later as a Major in the English Heavy Artillery.

After the war Major Seaman returned to his former position, and was shortly promoted to be Chief of the Division of Timber Tests, succeeding Mr. Sterns, who accepted a post with the Abitibi Power and Paper Company.

Up to the present time timber testing at these Laboratories has covered the mechanical and physical properties of ten species of Canadian timbers, while two additional species have been tested at their Vancouver branch. In addition to this, special tests have been made of Nova Scotia mine timbers and of substitutes for black walnut as gun stocks.

Latest Decree on Federal Sales Tax

Retail Lumber Dealer Selling Material Which Has Not Gone Through His Planing Mill Adds No Levy

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, Ottawa, has sent out the following clear exposition of the new federal sales tax as it applies to the retail lumber dealer. The context follows and virtually means that the retail lumberman does not collect a tax on any product sold in his line—no matter to whom—except such material as passes through his planing mill.

At the meeting of the Board of Commissioners of the Department of Inland Revenue and Customs, held in Ottawa, a deputation consisting of: Mr. J. R. K. Bristol of the Canadian Manufacturers' Association; Mr. E. M. Barrett, Vice-President of the Ontario Retail Lumber Dealers' Association; Mr. J. Clark Reilly, Secretary of the Association of Canadian Building and Construction Industries; Mr. W. W. Humphreys of W. C. Edwards & Co., Ltd.; Mr. Charles Robertson, Manager of the Retail Department of W. C. Edwards & Co. Ltd., Mr. Mayno Davis of McAuliffe Davis Lumber Co., Ltd.; Mr. Alex. Rose of the James Davidson's Sons Co., and Frank Hawkins, secretary of the Canadian Lumbermen's Association, presented the difficulties of the Board which have arisen in connection with the application of the rules of the Board of the Sales Tax recently passed by Parliament, particularly as it effects the retail lumber dealer.

The decision of the Board is that lumber in the possession of a retail dealer which is further manufactured or processed by him in any way must have 2 per cent. added to the total value of such commodity. In all other cases where the retailer disposes of his stock in exactly the same shape in which he received it, whether sold to a contractor or consumer there is no further tax to be added on his invoice.

It is realized by the Commission that this decision creates inequalities and they indicate that the matter will receive the most careful consideration looking towards an amendment of the Act, which would be necessary. In the meantime, however,, the Act must be administered in accordance with the above decision.

It is proposed to issue licenses for manufacturers, wholesalers, and possibly retailers, within the near future, but it is urged upon you in the event of uncertainty that you should consult the nearest collector of Inland Revenue for instructions how to proceed.

The Rules as They Stand

For your fuller information we append repetition of rules up to the present time:

(1) Where a manufacturer of lumber sells to a wholesaler or a jobber the tax to be added is 1%.

(2) Where a manufacturer sells to a retailer, lumber in the rough or further processed, the tax to be added is 2%.

(3) Where a wholesaler sells to another wholesaler, jobber or retailer the tax to be added is 1%.

(4) Where a retailer operates machinery for the further processing of lumber, he is regarded as a manufacturer to this extent, and on all such work must add a tax to his invoices of 2%. In all other cases, that is, where a retailer sells any portion of his stock in exactly the same condition as he received it, whether sold to a contractor or a consumer, no further tax is to be added.

(5) Where a manufacturer sells direct to a railway company or a similar organization, which buys lumber not for its own use in construction purposes the tax to be added is 2%.

(6) A wholesaler selling to a railway company must add a tax of 1%.

Secretary Boultbee of the Ontario Retail Lumber Dealers Association, Toronto, has also sent out information to the members of that body on much the same lines.

British Merchants and Single Buyer

The high cost of timber in this country is due to the exorbitant prices demanded by the Scandinavian exporters. British timber merchants are now debating what action they shall take to obtain cheaper supplies from abroad. Timber has increased in price so greatly since the war ended that our importers are hesitating over making further purchases, says the London, Eng., "Daily Mail."

In 1914 Swedish deals and battens were obtainable f.o.b. at about £11 10s. per standard of 165 cubic feet for deals and £9 10s. per standard for battens. When all purchasing was done by the Government buyer timber rose to about double these prices. Since the Government buying ceased deals have risen to about £42 and battens to about £32 per standard f.o.b. These rates do not satisfy the Swedish exporters, who are asking still higher prices for future deliveries.

British merchants regard these demands as impossible, and are seriously considering the establishment of a single purchasing committee to do the whole of the buying for British importing firms. They realize that the foreign shippers are strongly organized, but think that a co-operative effort on the part of importers in this country will be successful in bringing prices down.

Owing to the continually rising cost of construction many orders for new ships are being withdrawn. Shipyards do not make fixed price contracts now, as it is impossible to foresee what costs will be at any given period in the future. Therefore new ships are built on a system under which the person who gives the order has to pay all charges for labor and material, plus a percentage to the building firm.

Usually an estimate is given founded upon the prices ruling when the order is placed; but this is simply a guide to probable cost. Wages and materials have risen to such an extent that owners now find they may have to pay half as much again for a ship as they had expected. In view of falling freights and heavier operating charges they cannot afford to do this. They see no prospect of ever being able to work these very expensive vessels at a profit, and are therefore withdrawing the orders to build them wherever possible.

Shipyards have so much work in hand that they will not immediately feel any ill effect from these cancellations.

Owing to her difficulty in getting bunker coal Italy is going in largely for building motor ships.

The Belgian glass industry is turning out about 2,000,000 square feet every month, yet cannot cope with the orders pouring in from all parts of the world.

There is a large demand for all kinds of British commodities in Finland.

The Permanence of Creosoted Posts

Many lumber dealers have asked us for concrete examples of where creosoted posts have withstood the test of time, says the Long-Bell Bulletin, which recently contained a photograph of a creosoted fence erected in the plant of the Old Dominion Creosoting Company at Money Point, Va., one of the pioneer commercial treating plants in the United States. The posts were treated with creosote in the year 1882, and the boards treated in 1895. The posts and fencing boards are pine and are perfectly sound. This illustrates the effectiveness of material properly treated.

All of us are fully aware that creosoted fence posts have been used in European countries for many years; however, it is practically a new venture in America. While large users of poles, piling and timbers in the United States have been buying creosoted materials for upwards of forty years, no organization has attempted to fulfill the demand of the farmers in our country with decay proof fence posts, until our company, after years of research and experimenting, and gathering of data in Europe and America, installed huge creosoting plants for the purpose of producing a decay proof fence post.

Creosoted yellow pine fence posts are treated full length by the pressure-vacuum process. The posts ready cut to required sizes with all bark peeled off, thoroughly air-seasoned, are loaded in cages especially constructed for the purpose and run into large air-tight cylinders, after which the cylinder doors are closed and the cylinders filled with creosote from large overhead tanks. Pumps exerting very high pressure are then put into operation and the creosote forced into the wood until the cells are practically filled, after which a powerful vacuum is applied and the surplus oil withdrawn from the wood. By this process the sap-wood is penetrated with the preservative, fitting the posts for many years of service and doing away with replacements and repairs necessary every so often when ordinary fence posts are used.

Every phase of the production of treated posts, from the pine forests to the creosoting plants, and from the creosoting plants to distributor and user, has only one feature as the goal—the complete satisfaction of the purchaser and the consumer.

It is estimated that it costs on an average of $75.00 per farm per year to replace broken and decayed fence posts. By preventing decay, this expense can be saved and the use of creosoted yellow pine posts will enable farmers to keep this money in the bank.

Aside from the practical value of permanent construction on the farm, there is added value of good looks; an asset of the first importance. In the old days it was merely a question of putting up any kind of a structure—any kind of a fence. To-day, ways and methods are changing. This change has been in progress for a number of years; the old is making way for new and better methods, a fact amply proved by the wider realization on the part of the farmers of the importance of building for the future.

A group portrait of the happy company at the Lumbermen's Picnic held at Grimsby Park. The picture is taken in front of the hotel and the central figure in the gathering (just to the left of the big sign) is Mr. Fred H. Big wood, of Toronto, who won the prize for being the best-looking man on the grounds. He is surrounded by a dozen or more female admirers.

Wholesale Lumbermen Gather at Grimsby

First Annual Outing Favored with Fine Weather and Jolly Crowd—Baseball and Other Attractions—Prizes Awarded in Various Events of Interest

The first annual picnic of the Wholesale Lumber Dealers' Association of Toronto, to beautiful Grimsby Beach is now recorded among the outstanding occurrences of 1920. So successful was the event that it has practically been decided to make it an annual institution. Everything passed off with a swing and rhythm, the weather being charming, the associations delightful and the various events carried out with an enthusiasm and heartiness that aroused even the most lethargic excursionists. The steamer "Macassa" carried a jolly crowd from Toronto, while others, who were unable to take the boat, motored to the park from Hamilton, Woodstock, Oakville, Toronto and other points. Among the lumbermen, who are prominent summer residents at this widely-known resort, are A. E. Clark, (former chairman of the Wholesale Lumber Dealers' Association), A. K. Johnson, Toronto, C. M. Wells, Paris, Ont., and others.

The first episode of the day was a baseball match between the dispensers of wood products living east of Yonge St. and those residing west of that commercial artery, including the representatives from Hamilton. Many traditions and records were broken in the titanic struggle. In the first place there were about twenty-five men playing on each side—the regulation infield and outfield being so thickly studded with living pedestals that any hit, which went outside the diamond, could not possibly land on the ground owing to the forest of hands reared to gather in the ball. Duke Johnston, of the Union Lumber Co., did the twirling for the easterners in regal style. Guy H. Long, of Hamilton, was in the box for the westerners. The receivers for the eastern and western contingents were: K. M. Brown, of the Vancouver Lumber Co., Toronto, and Bert Harper, of the Long Lumber Co., Hamilton. C. Schmidt, of the R. Laidlaw Lumber Co., Toronto, was the impartial umpire, and J. B. Jarvis, of Elgie & Jarvis, Toronto, the official tally-keeper. Everybody joined in the fray except three distinguished spectators, who had a seat on the grandstand, in the persons of Hugh A. Rose, J. P. Johnson and Frederick Scherbarth. At the end of the ninth, the score stood 11 to 7 in favor of Duke's disciples or the easterners, then an adjournment was made to the Park House for lunch.

Nearly one hundred sat down to an admirably-arranged repast at which A. E. Clark presided and D. C. Johnston was master of ceremonies. Any man seated next to his wife at the festive board, any two members of the same firm who were together, or anyone coming in late, etc., like W. C. Gall, were all "fined," and the various offenders paid with alacrity. Mr. Clark formly welcomed the visitors to the park and hoped that they would spend a pleasant day. There were various pastimes in which all could engage and he was naturally gratified to see so many present. While this was the first picnic of the Wholesale Lumbermen Dealers' Association, he trusted that it would not be the last. He extolled the beauties of Grimsby as a summer resort and the exceptional facilities that it afforded for passing a splendid holiday.

W. C. Wilkinson, for nearly fifty years secretary of the Board of Education, Toronto, and father of C. W. Wilkinson, (managing director of the Union Lumber Co., Toronto), was introduced as one of the "oldest and most honored residents of the park." Mr. Wilkinson gave a brief history of the early days of Grimsby Beach when the Canadian Chatauqua used to be held within its precincts. On the occasions of visits from noted orators like Rev. Dr. Talmage, Sam Jones and others, as many as seven thousand people would assemble and hang with breathless interest on their eloquent deliveries. Mr. Wilkinson added that the summer colony at Grimsby was growing rapidly, new cottages were being erected and the attractiveness of the famous watering place was never as great as today.

Loren L. Brown, of Vancouver, the new B. C. Lumber Commissioner for Eastern Canada, was introduced to the gathering by the chairman, and received a cordial welcome.

The proceedings were further enlivened by several contests, the most outstanding of which was, perhaps the winning of a silk necktie by Fred. H. Bigwood, of the Canadian General Lumber Co., who was awarded the premium of being the "best-looking man in the company." The judge was Mrs. A. E. Clark, and the verdict was heartily acclaimed. The chairman, Mr. Clark, was barred from the competition by reason of his official position as presiding officer. Mr. Bigwood smilingly accepted the decision and was compelled to mount a chair in graceful acknowledgment of the distinction.

For having the largest family, en block, on the grounds, the prize went to J. F. Wachter (who is associated with R. G. Chesbro, Toronto). The referee was C. W. Wilkinson. The premium for the best-looking family on the grounds was awarded to R. B. Young, (with the Fesserton Timber Co., Toronto) and houshold, the award being a pair of white silk gloves. H. Boultbee, secretary of the Wholesale Lumber Dealers' Association, had to perform the delicate task of rendering judgment.

The Proceedings of the Afternoon

At the close of these contests, which formed an enjoyable feature of the noon-hour, the party assembled in front of the hotel and was photographed in a group, Mr. F. H. Bigwood being the central figure. During the afternoon a number of the boys played baseball for a couple of hours while others engaged in tennis or took part in their first game of lawn-bowling, the new green being in excellent shape. On the site of the former hotel, "The Lakeside,"

AN IMPOSING QUARTETTE

From left to right—D. C. Johnston (Member of Picnic Committee); A. E. Clark (the Lumbermen's Host at Grimsby Park); A. K. Johnson (Member of Picnic Committee), and L. D. Barclay (Chairman of the Wholesale Lumbermen's Picnic Committee)

which was destroyed by fire a year ago, the residents of the park have now admirable lawn tennis courts and a bowling green capable of accommodating eight rinks. The residence of A. E. Clark is the first one east of the tennis grounds and occupies what may regard as the most commanding view of any house at the beach. Such diversions as the mechanical horse races, bowling alleys, roller coaster and other mid-way devices took up the rest of the day. A number remained over in the evening to attend the dance given by Grimsby Beach Women's Improvement Society.

Dinner was served at 6 o'clock at the Park House and brief happy speeches were made by A. C. Manbert, chairman of the Wholesale Lumber Dealers' Association, who was prevented from attending in the morning. Mr. Manbert referred to the success and enjoyment of the first annual outing and thanked the members of the

Fred H. Bigwood, of Toronto, who captured the male beauty award, was the idol of the ladies, who gathered around in an admiring throng

Picnic Committee, Messrs. L. D. Barclay, D. C. Johnston and A. K. Johnson, for their activity and interest. He said they had put their whole heart into the undertaking and deserved the appreciation of all. The gratitude of the company was also due to Mr. and Mrs. A. E. Clark for their splendid welcome and the excellent arrangements made for the entertainment of the visitors.

In responding, Mr. Clark voiced the satisfaction which it afforded Mrs. Clark and himself to have the lumbermen at Grimsby Beach and extended a cordial welcome to the members to make the park their objective point for next year. The suggestion was warmly applauded. Mrs. Harry Burkholder, of Hamilton, president of the Grimsby Beach Women's Improvement Society, also extended a few words of welcome and told what the society was doing, in conjunction with the Grimbsy Beach Bowling & Athletic Association, to enhance the attractiveness of the grounds. A hearty vote of

A gala group on the grandstand at Grimsby Park watching the brilliant plays in baseball at the Lumbermen's Picnic

thanks was also tendered Mr. and Mrs. Brunt, of the Park House, for the splendid manner in which they looked after the comfort of the guests.

At 7.30 o'clock the steamer "Macassa" left for Toronto, and shortly after 10 o'clock the tired but thoroughly satisfied picnickers arrived home, all expressing the opinion that the initial annual picnic of the wholesalers had been a success and its memories would live long in the minds of those fortunate enough to be present. The slogan of the day was, "Hope you had a good time and will be with us again."

News and Jottings of the Picnic

The fat man's race did not materialize owing to lack of time but had the event been pulled off, A. C. Manbert, Horace Boultbee, W. C. Gall and Alf. Clark were barred.

Some of the new exponents of lawn bowling were so delighted with their experience that they are thinking of laying off selling lumber for a couple of months and engaging exclusively in this pastime.

Don Barclay and his associates on the picnic committee, D. C. Johnston and A. K. Johnson, worked diligently for the success of the outing.

A wholesaler in western Ontario, in writing the "Canada Lumberman," refers particularly to the success of the recent picnic at Grimsby and remarks: "This appears to me to be one of the finest outings not only physically, but socially, and it seems remarkable that so many different concerns engaged in the same line of business can get together and enjoy one another's company, as was done at Grimsby. It speaks well for the future of the Lumber Dealers' Association and the lumber trade in general."

There was a wholesaler present from Woodstock who was on the side of the western contingent in the ball game.

"What position do you play?" asked a certain "Guy" who pitched, and the man shot back "Well, I Can-field."

"Duke" Johnston of the Picnic Committee proved to be a whirlwind of a ticket seller. He spent a whole afternoon on the job the day previous and actually disposed of one pasteboard.

Another item which had aroused some interest was the swimming, and the populace were invited to come down and see some of the boys dressed on four sides (d.4s.)

The Close Utilization of Timber

The emphasizing of the wasteful lumbering methods of the past is of little service unless the practicability of better measures can be shown. Where commercial methods are being used they should be given full recognition by all conservationists, and given earnest consideration by operators, says A. V. Gilbert.

An instance of close utilization is evidenced on the limits of a company operating in a modest way in the Parry Sound district. This company secured a block of timber, consisting of mixed hardwoods and conifers, situated near the mill of another company. The first mentioned company let out its woods operations to a sub-contractor and is proceeding to log the area very cleanly.

The thoroughness of the operations is shown in the disposal of the products. The softwood logs go to the neighboring mill; the hemlock ties (hewn) to the railway company; the spruce and balsam pulpwood to a pulp mill at a considerable distance; the basswood logs, as also any good balm-of-gilead logs, go to New Jersey for match stock; the birch logs go to Montreal for export to Europe, for use as veneer, and the other hardwoods, including white oak, ash and elm are also disposed of. In addition, cedar poles are taken out, the hemlock bark is shipped to tanneries near Toronto, and hardwood waste is used as fuel in its camps. This operation, therefore, may be said to represent the maximum of close utilization. This timber license, of course, is close to a railway, but there must be many opportunities for other such intensive operations throughout Ontario.

Close utilization is also adopted by some of the chemical companies. They operate sawmills in conjunction with their wood distillation plants, and have logging railways, one of which is 13 miles long. They saw both softwoods and hardwoods into lumber, carbonize smaller hardwoods for chemicals, and use inferior cordwood and slabs from the mill for fuel to heat their ovens. One company at least is about to experiment with the carbonizing of hardwood slabs.

These examples include the logging of hardwoods, which is necessary to solve present forestry problems. It seems probable that more companies could be operating logging railways and removing hardwoods, when the present prices of finished products are considered. If logging railways are not feasible further experiments with driving hardwood logs might be carried out. Many companies have already succeessfully driven hardwoods for short distances, after leaving the logs in the bush for a year to dry out.

Industrial Expansion of Northern Ontario

Many New Pulpmaking Plants Will be Erected—General Activity Witnessed at Several Points—Settlers Gratified over the Promising Outlook

The North is rapidly coming to its own. It has long been the scene of busy sawmills and lumbering and logging activities. When the sources of timber recede the mills naturally go farther back in order to secure adequate supplies. In New Ontario and along the North Shore there have for years been many flourishing and busy sawmills, but a new arrival is now presenting itself in the rapid multiplication of pulp and paper companies, a number of which own and operate their own sawmills and thus make the fullest and best use of all the timber on their limits.

From time to time there have appeared in the "Canada Lumberman" extended references to the lumbering operations of the north and northwestern parts of Ontario and eastern Quebec. The latter has long been the busiest pulp and paper province in Canada, but, judging from the number of units about to be located in Ontario, the eastern province will have a close rival. It is interesting to record some of the latest propositions along this line. They show the magnitude of the undertaings and the widespread character of the enterprises Northern Ontario should boom, as never before, owing to the high prices prevailing and urgent demand for pulpwood. and many outlets for other forest products.

The newer portions of Ontario, which now have flourishing pulp and paper mills at Iroquois Falls, Smooth Rock Falls, Port Arthur, Dryden, Espanola, Fort Frances and other places, will shortly boast of a number of new industries that will cause greater development of the hinterland than has taken place for many years. Several companies have been formed and the projects which they have in hand are coming along nicely and matters are rapidly taking shape. Towns are vieing with one another in their interest to attract pulp and paper concerns.

The Provincial Paper Mills Co. of Toronto, which turns out about 100 tons a day of book and writing paper, and has plants at Mille Roches, Thorold and Georgetown, recently absorbed the Port Arthur Pulp & Paper Co., who operate a 60-ton sulphite mill. It is the intention of the Provincial Co. to supplement its activities in Port Arthur by the erection of a 40-ton book mill, the plans and specifications for which have been prepared. Next spring actual construction will be begun and. it is expected that the new industry will be in operation within a year. The sulphite pulp of the Port Arthur mill, instead of being sent to the United States, will thus all be utilized at home.

Twin Cities Get New Industries

At the time of reorganization the Provincial Paper Mills was allowed $2,400,000 authorized preferred stock, of which $1,700,000 has been issued; $7,600,000 of common stock, of which $3,500,000 has been issued; and $3,000,000 of bonds, none of which has been issued. It is the present intention of the company to finance the new mill on bonds. if possible, with a supplementary sale of treasury preferred stock, should that be necessary. The bonds would be secured by the company's four other mills at Georgetown, Thorold and Mille Roches.

Another mill which will go up at Port Arthur will be a large pulp plant of the Kaministiquia Pulp & Paper Co., which has a capitalization of $1,000,000, and is composed principally of Toronto capitalists. Sixteen acres have been leased from the Port Arthur Parks Board in the north and industrial section of the city. Construction work will be started on the big enterprise of 250 tons at an early date.

The Fort William Pulp & Paper Co., at the head of which is John G. Sutherland of Dayton, Ont., will proceed with the erection of a pulp and paper mill on the Mission property at the mouth of the Mission River in Fort William. The plant will ultimately cost about $3,000,000, and the pulp mill will be erected first and will be ready for operation in a year.

Another pulp plant of 40 tons a day capacity will be erected at Nipigon by the Nipigon Fibre & Paper Mills, Limited. The location is just one mile west of the village and local and eastern capital are interested, Col. J. A. Little being at the head of the enterprise. The company's offices are located at Port Arthur.

J. H. Black of Toronto, has interested a number of local capitalists from Ontario with the idea of putting up another wood pulp plant at Haileybury.

The Spruce Falls Co., Limited, has been very recently reorganized with a capital stock of $7,000,000 and will put up a 150-ton groundwood and sulphite pulp mill at Kapuskasing on the Transcontinental Railway, 70 miles west of Cochrane. A 150-ton newsprint mill will also be erected and this work is to proceed without delay.

Wants More Pulpwood Concessions

The Lake of the Woods Pulp & Paper Co., at the head of which is E. W. Backus, intend erecting a pulp plant and later on a newsprint mill at Kenora. The town has granted certain waterpower concessions to the company, and it is expected that work on the new undertaking will be proceeded with in the near future. Peter Heenan, Labor M. P. P. of Kenora, was in Toronto recently, with the request for certain waterpower concessions for the company. The Hydro-Electric Power Commission must give its permission before the request for these concessions can be granted. Mr. Heenan said that the new concern would dispose of at least 15 per cent. of its product in Canada. Mr. Backus, in order to further the interests of the new concern, has made application to the Ontario Government for an additional pulpwood concession of nearly 2,500 square miles, and also the waterpower rights on the White Dog Falls. This application is being opposed by the publishers of Ontario daily newspapers who contend that, as Mr. Backus' mill at Fort Frances refuses to sell any of its product to Canadian consumers, even at the price prevailing for newsprint in foreign countries. he should not receive further favors until he changes his personal attitude and the policy of his company. It seems that Mr. Backus has made a pledge to the Ontario Government that if the additional pulpwood limits and waterpower rates are granted for his newsprint mill at Kenora, he will supply his proportion of the domestic newsprint requirement. This, however, is not satisfactory to the Ontario publishers and it is not known yet how the issue will eventuate .

Board Mills are Much Rushed

The Canadian Paper Board Co. was recently incorporated with a capital stock of $5,000,000. This will be the new name of the Canada Boxboard Co. and it is understood that all the plants of the organization will be greatly extended as well as a new mill erected in the not far distant future, A new pulp plant is now nearing completion at Frankford, in Hastings County, which is equipped with four grinders and four wet machines, and will turn out 25 tons of mechanical pulp daily, which will be used at the various units of the company. It is understood another machine will be added to the Frankford mill, which will increase the capacity to 60 tons of board per day. J. G. G. Kerry of Toronto, is the president of the company, and David F. Robertson, of Montreal, general manager. Toronto is likely to have a board mill within its midst, which will be constructed by the company who have for some time been looking at various sites on the waterfront.

Recently the Canadian Paper Board Co. bought the McDougall site next to its plant at Montreal, with a view to making extensions when needed. The board market is decidedly active at the present time and the company produces various lines in the way of strawboard, chipboard, vatlined board, filled-wood board, patent-coated manilla board and patent-coated newsboard.

It is interesting to note that, at last, the big pulp and paper project at Kapuskasing, which has been in the air for some time, is about to materialize and work will be gone on with at once. The Kimberly-Clark Co. of Neenah, Wis., who operate a number of plants in the West and are a widely-known and well-established firm, have become financially concerned in the project and acquired considerable stock.

It appears the shareholders in the Spruce Falls Pulp & Paper Co. were given the option to sell out their stock for cash, accept stock in the new company, or take part stock and part cash. During the past few days officials of the Kimberly-Clarke company were in Toronto, conferring with Premier Drury and the Department of Lands and Forests, with a view to coming to a proper understanding so far as proceeding with the work is concerned. All obstacles have been cleared away and contracts awarded for construction. George F. Hardy, New York City, has been appointed consulting engineer. The groundwood plant and sulphite plant, each having 75 tons daily capacity, will be built first and it is expected they will be in operation early next fall. Those undertakings will be followed later by a three-machine newsprint mill of 150 tons capacity. The name of the new organization is Spruce Falls Co., Limited, and the

capital stock is $7,000,000. F. J. Sensenbrenner of the Kimberly-Clark Co. is president of the organization, and J. C. Kimberly, of Neenah, Wis., secretary. S. A. Mundy, of Bradford, Pa., former president of the old company, is the vice-president of the new concern, and E. Stewart, of Toronto, who is vice-president of the old company, has been made a director, being the only Canadian on the Board. Several waterpowers along the Kapuskasing River will be developed at once, and there is an ample supply of electric energy for many years to come. The company will erect a sawmill to get out the timber for their plants and will carry on extensive pulpwood operations this fall and winter. The site of the new mill is just where the Transcontinental Railway crosses the Kapuskasing River, and it is believed that no better selection of a location could be made. The surrounding territory is heavily timbered and the settlers will welcome the addition of the pulp mill, which will afford them a ready outlet for their pulwood. Kapuskasing is the scene of the Soldier Colonization Scheme, regarding which so much was heard at the recent inquiry.

Unusual Activity in Pulpwood

Three years ago the Spruce Falls Pulp and Paper Co. were awarded the Kapuskasing pulpwood concession of 1,740 square miles at the flat rate of 75c per cord, for all kinds of pulpwood, plus the usual government levies of 40 cents a cord for spruce and 20 cents a cord for other pulpwood. The Ontario Government recently raised these dues to 80 cents a cord for spruce and 40c for balsam and other pulpwood. This, however, is not looked upon as a very serious barrier by any of the pulp and paper companies up north, owing to the fact that peeled spruce wood and balsam is now commanding from $18.00 to $20.00 per cord, f.o.b. cars, and poplar from $13.00 to $14.00. These prices are contracted ones and have resulted in a larger number of settlers than ever going into the pulpwood business on a gigantic scale.

Definite Names for Each Grade of Lumber

Editor, Canada Lumberman:—

With reference to Mr. Haney's article in a recent issue of the "Canada Lumberman" on standardizing grades, I wish to say that I have known Mr. Haney by reputation for a number of years. I believe he can give you some valuable information on the subject as he understands thoroughly what is required by the trade.

However, I am of the opinion that Mr. Haney's letter is more from the point of view of the middleman than the wholesaler or mill owner. As the names of grades in the different markets are based on the way the mill owner puts up his lumber in the yard, my idea would be to arrive at a definite name for those grades and then the middleman could order any certain grade for his particular trade and have it sorted from the grades as they are put up in the yard.

Most mills have a capacity of from twenty to thirty-five grades on their boardways, and, consequently, could not put up all the grades mentioned by Mr. Haney. For instance, a mill owner might be making all his good sides 2 in. and his 1, 2 and 3 cuts 1½ in. and his common or mill run 1½ and 1 and 2 culls 1 in.

Nor for these grades only he would require space on his boardway as follows:—

2 " x 8" & up	10/16'	Good Sides	
2 x 4 & up	10/16	1-2 & 3 Cuts	
2 x 4 & up	6/9	Good Shorts	
1½ x 6 & up	10/16	1-2 & 3 Cuts	
1½ x 12	10/16	Common or Mill Run	
1½ x 10	10/16	"	"
1½ x 8	10/16	"	"
1½ x 6	10/16	"	"
1½ x 5	10/16	"	"
1½ x 4	10/16	"	"
1½ x 7, 9, & 11	10/16	"	"
1½ x 4 & up	6/9	Common Shorts	
1½ x 4 & up	6/16	No. 1 Culls	
1 x 12	10/16	No. 1	"
1 x 10	10/16	No. 1	"
1 x 4 & up	6/16	No. 1	"
1 x 12	10/16	No. 2	"
1 x 10	10/16	No. 2	"
1 x 4 & up	6/16	No. 2	"

You will see that by cutting only one thickness in mill run or common, and two other thicknesses in the upper grades and culls, that it would be necessary to have space for nineteen grades on the boardway and nineteen pile bottoms to start these grades in the yard. Where there is more than one kind of equipment in the mill for turning out lumber, the logs are generally sorted, and one kind of equipment is cutting one thickness while the other may be cutting something else which would require still more boardway space.

Every up-to-date mill tries to cut to grade in the mill as much as possible as this is where the money is made or lost in the product of the log and, in addition to the grades for each size, provision must be made for errors in sawing. On the other hand, every mill owner should know the requirements of the market and put up his grade as much as possible to conform with those requirements, as it saves rehandling at the yard.

Yours truly,
James Charron.

Iroquois Falls, Ont.

New Ship Sails With Big Lumber Cargo

One hundred and twenty days from the time her keel was laid in the yards of J. Coughlan & Sons, Limited, Vancouver, the S.S. Margaret Coughlan put to sea from Bellingham with 4,000,671 feet of railway ties for discharge at Grangemouth, Scotland. The ship was loaded at Chemainus and Bellingham, sailing from the latter port on Thursday. She was loaded slightly under ten days and will arrive at her port of destination on August 5.

The cargo was furnished by the Ocean Lumber Company, and consigned to Price & Pierce, London. The British agents of the steamer are Messrs. Harris & Dixon, Limited, London. The Canadian Western Steamships, Limited, a subsidiary of J. Coughlan & Sons, Limited, is the owner of the ship. She presented a very fine appearance when she put to sea with her full cargo, and both officers and crew are highly pleased with her performance since they took her over.

Intensive Drive Against Accidents

The Ontario Safety League has prepared plans for an intensive drive against accidents, to take place in Toronto the week commencing 26th of September. This week will be known as "Safety Week," and in that period the Safety League and the various organizations co-operating plan a drive against unnecessary accidents and fires.

It has been clearly shown by past experience that a reduction in fatal and non-fatal accidents can be made by teaching the public to "Think Safety." Similar campaigns in other cities have been a great success, the most notable being that in St. Louis, where fatal accidents were reduced from 24 in the same week of the previous year to one in "Safety Week." Cleveland cut its fatalities from 15 in the same week of the previous week to six in "Safety Week," and Pittsburg showed a reduction from 28 to 16. The value to each community of lives saved cannot be estimated.

Sub-committees of the Safety League will cover such subjects as publicity, bulletins, motion pictures, schools for industrial safety, statistics, boy scouts, women, traffic, school and colleges, etc., etc. The various days of the week have been specially designated: Safety Sunday, with special sermons in the churches; Monday is Careful Day for Motorists; Tuesday will be Careful Day for Street Car Men; Wednesday is set aside for School Safety; Thursday will be At Home Day for Safety; Friday is to be called Careful Day for Pedestrians; and the slogan for Saturday will be "Safety for All, All for Safety."

During Toronto's "Safety Week" the various committees plan to teach accident and fire prevention to every man, woman and child in a spectacular educational campaign, in which various forms of publicity will be used. The public will be reached by means of posters, bulletins, bill boards, street car cards, letters, advertisements, meetings and safety shows, and generally given a liberal education in safety.

MY DESIRE

I desire to radiate health, cheerfulness, sincerity, calm courage and good will, I wish to live without hate, whim, jealousy, envy or fear. I wish to be simple, honest, natural, frank, clean in mind and clean in body, unaffected, ready to say "I do not know," if so it be.

To meet all men on absolute equality. To face any obstacle and meet and difficulty unafraid and unabashed. I wish others to live their lives, too, up to their highest, fullest, best. To the end I pray that I may never meddle, dictate, interfere, give advice that is not wanted, nor assist when my services are not needed. If I can help people, I'll do it by giving them a chance to help themselves, and if I can uplift or inspire, let it be by example, inference and suggestion rather than by injuction and dictation, that is to say, I desire to be radiant—to radiate life.

—Elbert Hubbard.

Railways Call for Many More Creosoted Ties

Large Wood Treating Plant Under Construction at Sudbury --Preservative Methods Extended to Other Lines of Timber—Conserving the Supply

A new creosoting plant is being erected by the Canada Creosoting Co. at Sudbury, Ont., and good progress is being made in construction work. In 1912 the Canada Creosoting Co. established a plant at Trenton, Ont., with an annual capacity of about a million and a half of treated railway ties.

The new undertaking at Sudbury will be in operation in July next and will give steady employment to about 200 men. The location is between Sudbury and Copper Cliff on the Soo branch of the C. P. R. The industry will be larger than the one at Trenton and will have an output of two million ties a year, all of which will be used by the C. P. R. The buildings will be 175 ft. long and 40 ft. wide, constructed entirely of brick. There will be two huge cylindrical retorts each 150 ft. long, and 7 ft. diameter, inside measurement. There are yard facilities for 2,094,000 ties, which is over double the storage accommodation of the yard at Trenton. The head office of the Canada Creosoting Co. is at 1006 C. P. R. Building, Toronto, Mr. R. V. Look being the president of the company and W. E. Doan, secretary. The principal kind of ties treated are beech, birch and maple and jack pine.

Canadian railways are every year using more creosoted ties, which treatment, it is estimated, adds from four to five times to the durability of the timber. It may be asked why so many sleepers undergo preservative treatment at the present time, and the answer is not difficult to furnish. Wood is becoming increasingly valuable as those who have to purchase lumber and building materials realize. In the days before the war, an ordinary tie was put down and lasted for four or six years and the work of replacing it was not costly. Labor was cheap and so were ties. To-day all kinds of timber have gone up tremendously and hardwood and softwood ties sell for from five to six times what they brought a decade ago. Then a tie could be taken up and a new one substituted for about 15c. Now it is said that labor costs average something like 60c apiece. Not only is creosoting being resorted to to conserve the tmber but the less track disturbance and delays there are in the operation of replacement, the more traffic there can be handled.

Millions of Ties Used Annual'y

One of the greatest developments of modern times is the increasing use of hardwood ties, which is engaging the attention of the transportation authorities for a long time. There are used in Canada some 20,000,000 ties a year on the 40,000 miles of railway, and the way in which the development of the industry has proceeded, was referred to at considerable length in a recent edition of the "Canada Lumberman."

It is now the aim and object of companies to preserve the strength, life and service of ties as long as possible, and anything that will tend to reduce the expense of renewing railway timbers, is being heartily welcomed. The railways in putting down ties now use tie plates, which are spiked to the ties, with the rails set in place. This is much easier on the timber and causes less expenditure for renewing sleepers.

Recently the Ontario Government doubled the Crown dues on ties and the fee is now 10c instead of 5. In a recent address in Toronto, Hon. Beniah Bowman stated that legislation might be introduced at the next session of the Ontario Legislature to the effect that all ties must be sawn and not hewed; in other words, the pole tie would pass out of business and the squared tie come into exclusive possession of the field. Fully 25 per cent. of the ties taken out in the eastern part of Canada are hewn. If the provincial regulations called for the squared or sawn tie, it would materially cut down production. It is not always easy for the small operator, who desires to take out a limited number, to avail himself of a sawmill or establish a portable mill on his permises. Some men are very expert with the axe and can take out many ties a day, being clever enough to hew up to 100, while the average runs from 30 to 50. There are several tie operators in Ontario, one firm alone taking out 200,000 ties, fully 20 per cent. of these being hewn. It is difficult now to secure sufficient ties for all railroad requirements, and if any rigid regulation was enacted eliminating the hewn tie, a large proportion of the supply would be shut off.

The industry is growing more and more in importance and each year more settlers derive a revenue from cutting ties. It, surely, cannot be the intention of the Ontario Department to insist that all those who take out a few hundred or few thousand ties should convey or drive them to a sawmill in order to have them sawn. Whatever changes may be inaugurated by the officials of Lands and Forests branch, in the interests of the great prosperity of the rural sections of the country, there should be no interference with the way ties are produced, so long as they give satisfaction to the purchasers and render good service. All classes join in the work, such as sawmill operators, portable millmen, jobbers, settlers and contractors.

The Canadian Tie & Lumber Company, of Toronto, are extending their operations and have recently added to their staff of buyers. They now are handling considerably over 2,000,000 ties annually. Other companies also handle growing quantities. Shipments to various points during the past few weeks in spite of the scarcity of cars, have been exceptionally heavy.

One of the greatest developments of the time is the expansion of the treating plants. Creosoting is not only now applied to railway ties, but to many other lines of wood products. The Canada Creosoting Co. reports that it is extended to fence posts of white birch, jack pine and hardwoods. Other woods, which are treated at the plant in Trenton, are,—paving blocks, bridge timbers, telegraph and telephone poles, posts, piling, cross-arms, etc.

Ties dumped off dock or barge at Baptiste Lake, Ont., and loaded on cars by means of chain conveyor

As an aggressive and scientific forestry policy is being adopted and developed by governments and various lumbering and pulp and paper companies to conserve and renew the wooded wealth of the Dominion, so, too, Canadians at the present day are learning to take better care of the timber which they possess. Anything that tends to lengthen its life, adds much to conserve the present resources of the Dominion, reduces the expense of operation and maintenance of railways and other enterprises and produces national thrift in the propagation of the forest products.

No One Must Tamper with Trees

Winnipeg has passed special ordinances to protect trees. It has an offense other than authorized officials to tamper with them. Residential sections of Winnipeg are gradually becoming park-like stretches shaded by large trees. The city records show that 110,000 trees have been planted within the city limits, including the parks. Of this number 75,000 are on the streets. The parks board, which has jurisdiction over the boulevards, has planted 28,000 trees along the 120 miles of street so beautified, the total cost for tree planting being $26,000. Property owners have been responsible for the planting of 447,000 more trees on the boulevards in front of their residences.

Personal Paragraphs of Interest

W. J. Lovering, of Toronto, has been spending the past month in British Columbia on business.

Senator W. C. Edwards, of Ottawa, has been elected one of the two new directors of the Riordon Pulp and Paper Company.

J. F. Wachter of St. Louis, Mo., lately arrived in Toronto, and is now associated with R. G. Chesbro, in the wholesale lumber business.

Sir Lomer Gouin, who recently retired from the Premiership of the Province of Quebec, has been elected a director of the Laurentide Company.

S. Hargreave, of Gibson, Merrick & Lindsay, Limited, Vancouver, was in Toronto, recently, calling upon the members of the lumber industry.

J. L. MacFarlane of the Canadian General Lumber Co., Toronto, is spending his holidays at his summer home, Chemong Park, near Peterboro, Ont.

A. E. Gordon, of Terry & Gordon, Limited, Toronto, has returned from spending his holidays at his summer home "Bannockburn," Muskoka.

George H. Mell, of Mell & Sons Lumber Co., Philadelphia, Pa., was in Toronto recently calling upon the trade. He also visited Ottawa and Montreal.

A Ludlam, of the Ludlam-Ainslie Lumber Co., Leamington, Ont., is spending some time at Battle Creek, Mich., where he is taking special treatment.

Howard Johnson, manager of the Lake Lumber Co., Ltd., Qualicum Beach, B. C., was in Toronto lately and called upon a number of friends in the trade.

C. G. Anderson, of Toronto, and Mrs. Anderson are on an extended trip through western Canada and will spend some time at the Coast before their return.

Carl Riordon, vice-president and managing director of the Riordon Pulp & Paper Co., Montreal, has been elected a director of the Sun Life Assurance Co. of Canada.

W. A. Walker, of Ed. Clark and Sons, Toronto, has returned after spending a holiday at his old home in Hawkesbury and other points in eastern Ontario and Quebec.

John R. Haws, of Toronto, has taken a position with J. R. Summers, wholesale lumberman, 95 King St. East, Toronto, and will cover Ontario in the interest of the firm.

Sir George Bury, for the past year president of the Whalen Pulp & Paper Mills Co., Vancouver, has resigned and associated himself with large interests on the Atlantic seaboard.

The death took place lately in Ottawa of Thomas Mousseau, after a painful illness. He was well known as a lumber contratcor and is survived by a widow, three daughters and four sons.

D. H. McLennan, of the McLennan Lumber Co., Montreal, who is vice-president of the Montreal Lumber Association, spent a few days in Toronto, recently, calling upon the trade.

Alex. Gordon, who for the past year has been associated with Ed. Clark and Sons, Toronto, has joined the staff of Mickle, Dyment and Son, with whom he was previously for a long period.

A. B. Gordon, of A. B. Gordon & Co., Toronto, returned recently from a business trip to the Pacific Coast. He reports that lumber conditions in the west are improving and that prices are growing firmer.

G. B. Nicholson, M.P., of the firm of Austin & Nicholson, Chapleau, Ont., and Mrs. Nicholson have gone on a trip to France where they will visit the grave of their son, Lieut. Lorne Nicholson, who was killed in the Great War.

Wm. Robertson, who for several months past has been acting British Columbia Lumber Commissioner, with headquarters in Toronto, left lately for his home in Victoria, where he will resume his former duties in the Forest branch of the Department of Lands.

John McShane, a well-known timber broker of Vancouver, died recently while cruising some timber limits near Squamish, B. C. He was taken with a sudden seizure and passed away within a short time. Mr. McShane leaves a wife, three daughters and one son.

R. H. Underhill, for several years past sales manager of the Allen-Stoltze Lumber Co., Vancouver, has resigned and formed the Underhill Lumber Co. J. A. Drew, who returned some time ago from overseas, succeeds him as sales manager for the Allen-Stoltze Co.

J. G. Sadd of Maldon, Essex, Eng., who is now associated with Montague L. Meyer, former British timber purchaser, in London, was in Toronto the other dav and will spend several weeks in Canada looking into export and manufacturing conditions. Mr. Sadd leaves shortly for the Coast.

C. A. Westley, of the Toronto office of Geo. A. Grier and Sons, Montreal, who, with Mrs. Westley, has been spending the past few months in the Old Coutnry, has returned home. He reports having had a very pleasant holiday in visiting many of the scenes of former days and renewing old associations.

R. W. McLellan, of Fredericton, secretary of the New Brunswick Lumbermen's Association, recently returned from a trip to Great Britain. He believes that the overseas market offers a bright prospect for Canadian lumber. Ocean freight rates are now lower and there is more tonnage available while the demand is bound to improve.

E. R. Sutherland, manager of the Terminal Mills Lumber Co., Vancouver, B. C., was recently killed by an auto. Mr. Sutherland came to Vancouver ten months ago and previous to that time was a representative of the Victoria Lumber & Manufacturing Co., of Chemainus, with headquarters at Saskatoon. He was 39 years of age.

A. E. Richards, who for the past year has been Prince Rupert representative of Terry & Gordon, Limited, has joined the staff of the Toronto office. Previous to going overseas during the war, he was with John B. Smith & Sons, at Callander, Ont. Mr. Richards has been succeeded in Prince Rupert by George Neilson of Victoria, B. C., who is also a returned veteran.

Henri Dorion, crown timber agent at Montreal, passed away recently in Montreal. Mr. Dorion, who had been ill for several weeks, was a life-long resident of Montreal and was 65 years of age. He was the son of Hon. Justice Wilfrid Dorion, of the Euperior Court, and is survived by his widow and four daughters. A surviving brother is Mr. Justice Dorion of the Circuit Court.

Geo. F. Gray, formerly associated with the A. Sherman Lumber Company in the Metropolitan District, has opened offices in the Grand Central Terminal, New York City, and will do a general wholesale business, handling considerable spruce from the British Columbia, Saskatchewan, Quebec and New Brunswick sections of Canada. This will be news to his many Canadian friends.

J. R. Summers, of Toronto, recently returned after spending a considerable time among the mills of the north which he reports are operating satisfactorily. On the 12th of July Mr. Summers took part in the Orange sports at Sturgeon Falls and entered the fat man's race, which he won hands down. The prize was a bag of flour which he donated to a worthy resident of the town.

J. Bouffard, for many years law officer of the Provincial Department of Crown Lands & Forests, Quebec, died suddenly a few days ago at his summer residence on the Island of Orleans. He was sixty years of age and was one of the best-known officials of the provincial government, having joined the service in December, 1891. He possessed special knowledge regarding the laws concerning the lands, rivers and fisheries of Quebec, which made him a most efficient public servant.

Ellwood Wilson, head of the Forestry Department of the Laurentide Co., was among the Canadian foresters attending the Imperial Timber Conference in London. Mr. Wilson and Brigadier-General J. B. White, (who was the head of the Canadian Forestry Corps during the war, and who is at present woods manager of the Riordon Company), were the only two private foresters invited to be present at the conference, as all the others who attended are Government foresters. Gen. White was unable to go, due to pressure of business. Mr. Wilson represented the Canadian Pulp and Paper Association.

James T. MacLaren recently passed away in Vancouver, his death following a serious operation for appendicitis. He was a well known lumberman and was born at MacLaren's Landing, on the Ottawa River, over 50 years ago. He was a son of the late Mr. and Mrs. Henry MacLaren, and nephew of the late Mr. James MacLaren, of Buckingham, Que. The late Mr. MacLaren was in his early days engaged with his uncle, James, where he learned the lumber business. Next he moved to Strathcona, Alta., and still later to Calgary, where in conjunction with his brother, William he conducted a large timber business. A few years ago he went to Vancouver, where he was also in the lumbering. He leaves a widow and two children.

One of the results of car shortage in some regions is the severe damage done the logs and lumber piled for shipping from exposure to worms and insects. In the Memphis, Tenn., territory there is such a shortage of flat cars that hundreds of thousands of feet of logs are exposed to serious damage from worms, bugs and insects generally. One firm is said to have about 5,000,000 feet that can not be moved because of the scarcity of cars and other firms have large quantities exposed to severe damage. Shippers of hardwood lumber and forest products can not secure more than one quarter of the box cars they need even with the limited business that they are now doing. Many firms are using trucks for handling their logs, one firm in Memphis having about 30 trucks in operation.

Enlarged Service for the Retailer

How He May Cater to the Pressing Need for Houses and Building on the Farms

Building in the country districts has been held back for a number of months, partly because the public has an idea that the cost of construction work and materials is inordinately high, and partly because of a scarcity of the right kind of labor. That there is a great need for housing facilities is demonstrated every day in the larger cities, and probably, only to a lesser degree, in the smaller communities. During the spring and early summer there has been an unprecedented demand for homes, and prices have gone up rapidly. Many families have been sufficiently attracted by good offers to sell their homes, only to find it almost impossible to find a place to live when moving day comes. In some cities rows of new residences of average cost have been built by contractors and sold before the foundations were completed.

That this idea is catching is evidenced by a report from one of the smaller communities, where one of the retail dealers, a line yard concern, has commenced the erection of a number of homes. These homes will not be sold until they are completed and the cost is known, and the price will be as low as it can possibly be made, for the company furnishes all of the material from its own yard.

The enterprise ought to be successful. Few people can tell from plans and drawings just what a building will be like when completed; but when the house is built, provided reasonable attention has been given to make it attractive and convenient, it will sell readily to a family that is in need of a home. This company will also make plans and build homes for people who own vacant property.

Not every retail dealer is able to finance such a project; but it is easier for a retail dealer, with the stock in his yard and not moving, to use it in this way and thus realize on his stock investment. than it is for someone else who must borrow the money for both material and labor. And, the prospect for a fairly quick turnover is such as to make it an attractive method of creating business for the retail yard.

But dealers who cannot see their way clear to enter on a project of this character have other ways open whereby they can market a considerable portion of their stock.

From the present time until some time after harvest, the farmers of the middle north will be very busy in their fields. Crop prospects are so good that they are able to do some building, but they haven't the time to haul lumber, or to use it for some of the smaller buildings needed on the farm. Transportation difficulties during the remainder of the year will be such that a large proportion of the crop yield cannot be moved to market, and the elevators at all points will be filled to such an extent that much of the grain will have to remain on the farms. There will be need for granaries, and there is constant need for hog houses, poultry houses, garages and other small buildings.

Standard plans for such structures can be obtained from state agricultural schools, from associations of lumber manufacturers and other sources, The retail dealer can canvass his community for customers, and can ascertain their needs. He can then cut the material at the yard and haul it out by motor truck to the farm, where he can either supervise the erection by the farmer, or himself employ the workmen to do the job. Many a farmer will buy small buildings of this character if he can see the way to having them erected on his farm without the necessity of visiting the retail yard, having a bill of lumber figured, hauling it out and having to hunt for workmen to do the building.

Paper Company's Case Goes to Appeal

A. W. P .Buchanan, K.C., on behalf of the Canada Paper Company, Windsor Mills, Que., has inscribed in appeal, in the Court of King's Bench, Montreal, the judgment of the Superior Court, rendered by Mr. Justice Maclennan, granting the petition of Albert Joseph Brown, K.C., and ordering the company to perpetually refrain from using sulphate of soda or any other obnoxious compounds calculated to give off objectionable odors, in the manufacture of pulp and paper at the company's works at Windsor Mills, Que.

The company submits that the discharge of gases from the mill in question is not injurious to health or vegetation. The process of manufacture of pulp and paper adopted by the defendants is one of the most modern. Carbonate of soda was used up to 1908, but now the use of sulphate of soda is the only process that enables its mills to compete with imported pulp and also with pulp largely manufactured by this process in this country. It is submitted that there is no known process commercially practicable for removing all or even the major portion of the so-called bad smelling compounds and fumes from the discharged gases of sulphate pulp. If the injunction is allowed to stand, appellants say they will be compelled to close their chemical or pulp mill and also a portion of their paper mill, which gives employment to a large number of the inhabitants of the town.

Business Founded by Canadian Lumberman

The International Paper Company, which has appeared so prominently in the campaign against Canada at Washington, was founded by a Canadian—it was a consolidation, in 1898, of some 30 newsprint mills—the late Hugh J. Chisholm, who was born at Niagara-on-the-Lake. He went to a business college in Toronto and, beginning as a newsboy on the train, his work carried him to Maine, where he became interested in a newspaper and thence in lumbering and paper-making. Probably no man did more to build up these resources in that state than Mr. Chisholm, where he was not only highly regarded during his life-time, but has left a clean reputation behind him. The greatest monument to him is the model town he developed for his employees at Rumford, Me., says the "Financial Post."

A member of "The Post" staff. who knew Mr. Chisholm very well, had a long chat about him with a Maine attorney some months ago. This attorney always represented interests opposed to Mr. Chisholm, and they had many a bitter contest over water and other rights, but he paid a high tribute to his sterling character. He was a hard man with whom to close a deal. He would have so many points to bring up when everything seemed to be settled and days would sometimes be wasted over minor points. But when the matter was finally closed Mr. Chisholm carried out the terms in perfect faith even if they were unfavorable to him. The attorney mentioned one case where, owing to a legal technicality, Mr. Chisholm became entitled to an important share in some pulp lands and water power. He protected this interest through the court proceedings until the matter was finally settled in his favor. The attorney of the heirs then went to him to know what disposition he proposed to make. He at once said: "Now, Mr. ———, the law gives me these interests, but I am not morally entitled to them and I never had any intention of accepting them. My interest will go to the moral heirs not the legal." And so they did.

Mr. Chisholm's son, the attorney said, succeeded to his father's lumbering business in Maine, and, unlike the average successful men's sons, he is making good in a big way. Had he succeeded his father in the International Paper it is safe to assume he would not have adopted Mr. Dodge's unjust attitude towards Canada. The late Mr. Chisholm, though not one of the Canadian families—his father having emigrated from the North of Scotland—never lost an opportunity to praise this country. The writer remembers him on several occasions and particularly one afternoon on the deck of an ocean liner surrounded by a group of American, British and French financiers and investors, including James Speyer, Moncton Trewen, Spencer Trask. He said he believed Canada had the greatest future of any country in the world, because it had the strongest inhabitants physically and mentally. They were descended from the sturdy, honest U. E. Loyalist and Old Country stock, who were accustomed to hard work, who led frugal lives and who expected and loved the hardships in their way through the world.

Many Inaugurate New Timber Policy

It is learned that the whole question of scaling and measurements of logs and timber in Ontario is under consideration by the Ontario Government at the present time and that investigation is bein made at a number of mills and other places with a view to collecting data to assist in arriving at a conclusion as to which would be the best and most practical method to be adopted. Hon. Beniah Bowman, Minister of Lands and Forests, has just returned from a tour of inspection of the western part of the province.

Timber Estimating House Expanding

Mr. James W. Sewall of Old Town, Maine, has made arrangements to open an office for the conduct of timber estimating and mapping work throughout the Southern and Central States. The well-known and established Lumbermen's Bureau, Munsey Building. Washington, D.C., will act as Mr. Sewall's representative for that territory. This expansion has become necessary because of the continued increased demands for reliable work, such as the Sewall organization accomplishes, and so that Southern and Central clients can secure as good, quick service as to Northern ones. Mr. Sewall will be in active personal touch with both offices.

A new sawmill is being erected at Lakefield, Ont., by John Duignan, of Peterboro, Ont. The Lakefield Council recently passed a by-law to give the mill property a fixed assessment of $3,000 for five years and also the privileges of a switch to its property.

A Busy New Brunswick Lumberman

W. S. Richards of the Richards Mfg. Co., Campbellton. N.B., who was reecntly elected vice-president of the New Brunswick Lumbermen's Association, is a quiet, but forceful worker on behalf of this progressive organization. He is an unassuming, energetic gentleman, who believes in adhering closely to the interests of his business. Mr. Richards was born in York County, near Fredericton. When a young man he entered the employ of the Wm. Richards Co., Limited, of

W. S. Richards, Campbellton, N.B.,
Recently elected Vice-President of the N. B. Lumbermen's Association

which his father, the late David Richards, was a member. Upon the death of the latter, in company with his brother, the subject of this reference carried on the business, the name of which was changed to the Richards Mfg. Co., of which D. E. Richards, a brother, was president and manager. Upon the death of D. E. Richards, nearly a year ago, W. S. Richards was appointed general manager. He is industrious in the interest of the company and has many friends throughout the province.

Production Good and Help Efficient

Wm. McLachlan, of Magnetawan, says that he has no trouble in getting help this season in his sawmill and labor conditions are the best since the war commenced. Wages have advanced some, but men are more efficient. The bulk of the sawing this season is for contract work and he will cut a million and a half feet—one-half million more than in 1919. Mr. McLachlan says he has not shipped any lumber as yet and does not think he will have any trouble getting cars. His stock has to be towed some twenty miles before it reaches Burk's Station. The demand for lumber is the best that he has experienced in years and thinks the price compares favorably with other commodities. Mr. McLachlan has been a reader of the "Canada Lumberman" for many years and says he enjoys its contents and obtains from its pages much useful and timely information.

Building Volume Doubles Last Year

The pronounced improvement in building figures for the Dominion for the early months of the year has been well maintained for the month of June, the building totals for the forty-three cities for the past month standing at $13,278,300, as against $7,138.468 for the corresponding month a year ago, says the "Financial Post," Toronto. Building totals for the half year period are double the returns for the corresponding period last year, and total $59,691,699, while the returns for the first half of 1919 were $28,252,203, the returns this year being therefore in excess by $31,439,496. This increase is due in small measure to the higher prices prevailing for practically every form of building material this year, but the returns are a guide to the development in building in this country.

Permits issued for the 28 eastern cities reached a total value of $10,011.277, as against $5,798,763 for June, 1919. There has been an extensive revival in the west also, as indicated by the total of $3,267,-123 for the 15 cities as compared with $1,339,705 last year. Toronto and Montreal are both well in the lead, Toronto's returns totalling $2,656,193, and Montreal's, $2,440,933. Winnipeg also has made a rapid advance, permits reaching a total value of $1,236,450, as against $22.900 last year. Halifax leads in the Maritime provinces with a total of $189,435, as against $213,300 for St. John, and $163,210 for Moncton. The city of Sherbrooke also has entered upon a period of activity, totals standing at $639,703, as compared with $39,000 last year. Other centres in the east which are carrying out extensive building programmes are Quebec city, $332,990; Hamilton, $452,775; and Windsor, $342,290. Ottawa, with a total of $224,600, is considerably behind last year's figures of $856,205. Vancouver has made progress last month, however, with a total of $236,630 as against $62,921 last year. York township continues its steady development with permits totalling $500,000, an increase from the return of $417,800 a year ago. The smallest return is reported by the city of North Battleford, permits issued last month being valued at $625, and for the corresponding period a year ago, $490.

Canada to Forefront in Empire Exhibit

A recent despatch from London, Eng., says: Canada's timber wealth and how she preserves it are prominently before the British public in connection with the Empire Timber Exhibition and the Empire Forest Railway Conference. The exhibit of Canadian timber at the Exhibition is eminently practical, and applies to the building trade rather than to cabinet making. Samples of Canadian wooden houses, the first of which have now been erected in London with success, are shown, and there is a fine exhibition of pulp products, including artificial silk as well as paper. W. B. Stokes, forest products laboratory, Montreal, is in charge, and E. H. Finlayson, of the Forestry Department, is the Canadian representative at the forestry conference. Timber imports into the British Isles this year are expected to reach half a billion dollars, according to the statement of Lord Lovat, chairman of the British Forestry Commission, in opening the conference. "The British race had been the least interested in forestry science, is 25 years behind Turkey even, and has been most active in the destruction of forestry resources," he said.

Action Entered Over Flooded Lands

Claiming that as a result of the construction of the Chaudiere dam at Ottawa, some 12 years ago, lands were damaged through the high-water level, the Scott Estate, of which Dame Janette Louis Scott and Mrs. Fraser Madley are principals, has started an action for the recovery of $84,165. The action names the following firms as defendants: The E. B. Eddy Company, Limited, J. R. Booth, Bronson and Company, the Ottawa Electric Company, Ottawa Electric Railway Company and the Ottawa Power Company.

The defendants make use of the dam for the production of power to operate their mills and to provide raceways for the carrying of logs. The Scott Estate claim that their lands bordering on the Ottawa River from Brewery Creek west to Tetreauville, a distance of about one mile, have been flooded as a result of the construction of the dam. The level of the river has been raised, plaintiffs claim, and they seek the damages mentioned as recompense for the loss of valuable lands.

Valuable Compendium on Ventilation

An admirably illustrated booklet on the Buffalo Fan System of Heating, Ventilating and Humidifying (Catalogue 700) has been issued by the Buffalo Forge Co. of Buffalo, the Canadian end of which is the Canadian Blower & Forge Co. of Kitchener. The new publication is, possibly, the most complete and representative that has ever been produced by the company and practically constitutes a handbook on heating and ventilating inasmuch as it is taken, to a great extent, from the Buffalo Forge Company's handbook on "Heating and Ventilating," which enjoys a wide measure of popularity among heating and ventilating engineers in all parts of the country.

Austin & Nicholson of Chapleau, write that their output will be about equal to last year so far as lumber is concerned, but their production of railway ties will be, perhaps, 20 per cent less. The firm state that labor conditions are acute and men were never so unsettled, and it is still very difficult to carry on. With regard to the output generally, they say that they hear of many plants which may be compelled to close down early on account of a shortage of logs.

The estate of Henry P. Lawson, lumberman, of Georgetown, who died a few months ago, has been filed for administration in the Surrogate Court. The value of the estate is placed at $281,000. Mr. Lawson having died without making a will, the estate is to be divided according to law in the proportion of one-third to the widow and two-thirds equally among the four children.

Keeping Retail Lumber Stock in Good Shape

Advantages of Clean Yard and Well Laid Out Sheds—How to Pile and Handle Various Grades to Impress Patrons Favorably—Practical Pointers

The blazing hot sun at this season of the year occasions a greater need for watchfulness in the care of a yard than at any other time, but from the appearance of the majority of yards it would seem that the disposition exists to give them less care than ordinary. The influence of warm weather is relaxing to both mental and physical exertion, and the tendency of yard men is to follow the line of least resistance, which is found where the sun's rays do not strike them.

The appearance of a lumber yard at this time shows up more distinctly than at any other, for in the winter many things are covered by the snow that offend the sense of order when exposed to view. Uncovered stock remains the same from one day to another, but in hot weather the tops of the piles are changed by the heat every day, and unless properly cared for results in damage to the lumber.

This appearance of the stock is not the only thing that shows. It is not exaggerating to say that 90 per cent. of the country yards and weeds growing in them and in most of them very little is done to remove this vegetation, excepting perhaps in the alleys where the weeds get too thick and high. This is so commonly seen that the dealers themselves are aware of the incongruity of vegetations growing in a business place, for this is the impression given to anyone not accustomed to seeing lumber yards, and I venture to say that even a dealer visiting a neighboring town yard is not wholly exempt from this feeling. At least he will notice it if there are more grass and weeds in it than in his own yard. But should he be fortunate enough to visit a yard where nothing of growing vegetation could be seen anywhere about it, and it showed that efforts were made to eradicate the same, there is no doubt but the comparison between this and his own weed and grass-grown yard would appeal to him, and impress him with a sense of his own lacking in doing what should be done in improving the looks of his yard.

Now, what does this difference between these two yards indicate? Does it not signify the difference in the sense of orderliness in the character of the two dealers who are responsible for these varying conditions? The chances are that a man who is habitually slack regarding his place of business is also careless in his methods of conducting business. There is no question but the psychology of a dirty, disorderly yard is conducive to the forming of loose habits in business matters.

If you want to see this exemplified outside of the lumber yard, go out into the country and visit the places of the farmers you know and see the difference in the way some are kept up, and others lack repairs and are disorderly. Almost invariably you will find the best farmers giving more attention to keeping up their places in good order, and you can't help but being impressed with it when you come to see the ramshackle appearance of the next place, of the farmer you know, is hardly up to the average in good farming.

First Impression Was Verified

An old traveling salesman once told me that when he was going over new territory, his judgment of the new man he was calling on was governed a good deal by the manner in which he kept up his stock and the appearance of the yard. And his first impression, he said, were usually verified by his subsequent acquaintance of the party running the yard. If a dealer is careless about how his yard looks, he is pretty likely to be careless in many of his business ways, for as a rule, the two go together.

This is an important matter for the younger man to consider, for the first year or two in his management of a yard will be in a large measure detriment his general ways of doing in his afterward experience. If when working as second man you have been required to keep the grass and weeds out of the yard, the stock neatly piled and cared for, the rubbish cleared out and the whole yard in order winter and summer, you will find these habits you have formed will unconsciously influence you when you come to have the whole responsibility in running the business of the yard. As you start in, so in all probability you will continue, unless you indefinitely decide to change your habits in this respect. By this time, however, you find it harder to do unless you have a more than ordinary sense of order. A retail business of any kind requires the application of orderly methods and a general sense of appearance in all its details. With the exception, possibly, of a hardware store, I know of no line of stock more susceptable to getting disarranged, out of order and mixed up than the stock of a lumber yard, particularly in the country where it is more of a mixed character than in the cities, and it is no small part of a yard business to keep this conglomerate mass of merchandise in proper order and arrangement, and always having an attractive appearance.

Country yards are usually under-manned so far as help is concerned, and there are periods when little time can be spared for keeping things in order. There is always a tendency, however, to let these things go, and put them off till some future time, and the consequence is that it is not long before the whole yard is in disorder.

Clean Up As You Go Along

One proper way is to keep cleaned up and the stock in order as you go along. When showing out lumber to customers, it takes but a minute to put the piles in as good order as before, and the yard men should be required to go over the yard once a day and pick up the loose litter and broken pieces of lumber, and in hot weather, turn over the stuff on top of the piles that is warping. Ten or fifteen minutes a day spent in doing this will keep the yard in reasonably good appearance when in a busy time.

Have a sharp spade to get under grass sod and weeds. Throw the debris out of the yard. Then get a few loads of cinders and spread them on the surface you have gone over. This will effectually prevent any grass from growing there again. The backs of the piles are the dirtiest places in the yard, and the sash houses too will come under that category. There are many yards that, to the casual eye look clean, but like many dwellings, the out-of-sight places are replete with dirt and disorder. The average shed is so built that it is hard to get back of the piles to clean up. The back of a lumber passage way wide enough for this purpose. The back of a lumber pile costs just as much as the front part, and should have the same care. Where the stock is not fully dry when piled in the shed, the back lacks of sufficient circulation in hot weather. This will produce mildew, especially near the bottom of the pile. You will find more of this in the old sheds built many years ago when they were designed to cover the stock only, and cheapness of construction was the principal thing to consider.

The lower part of the shed may look fairly well, but in most cases the upper tier is something like the attic room of an old dwelling house, and yet, some of the most valuable part of the stock is stored up there. Nobody cares to go up there except when necessary to get something, for it is the hottest, dirtiest and most disagreeable place in the whole yard to be in, and for this reason it is avoided when possible. The fact is with most sheds, the upper part has no floor, the piled stock resting on the bare joists, affording no means for getting to the back of the piles except walking on one that is lower than others, and this inconvenient way of getting around up there causes this part of the shed to be neglected. Moreover, this is where the slow selling stock is usually put; also the odds and ends which is thought may be of use sometime or other. They go up there and are generally forgotten and not noticed till the time for the annual inventory comes around. There is a lot of good stuff in the back corners and out-of-the-way places in the average yard which might be made saleable if proper effort is made to bring them to the attention of customers. The stairs and runway should be made easy for customers to go up and see the stock on the upper floor, as these are generally constructed few people care to go up there and see for themselves the things the dealer is trying to sell them.

Properly Built Sheds Are Scarce

With some few exceptions, the retail lumbermen have not yet learned to build a shed as it ought to be. They are nothing but sheds when they ought to be warehouses where a customer can go anywhere about them with a feeling of freedom from liability of falling, and where, also, the dealer can inspect any part of his stock at all times. No line of business men in the country spend so little caring for their stock of goods, excepting perhaps the farmer whom the retail dealer is constantly hammering at to get him to build more shelter for his stock and machinery, while at the same time the farmer can see thousands of dollars worth of stock lying in the yard

exposed to the dirt and all kinds of weather. A farmer, or anyone else, of orderly habits, can't help but take notice of a grass-grown and disorderly yard, and they have their opinions of the dealer accordingly. They perhaps don't say it when he is trying to sell them a bill of paint, but they can't help but think, "Why don't he paint the buildings of his yard?" The lumber dealer is a great preacher in urging other people to spend their money for improvements, but he takes care to spend as little as he can for the same purpose.

I said to a shabbily dressed Jew storekeeper the other day, "Why don't you wear yourself some of the clothes you are trying to sell to other people?" You want to know the result? Well- the next time I went arounr there, the old man had taken my advice and looked much more respectable.

One closed shed is more common now than it used to be. The future will see the whole stock under cover, which is as it should be. The closed shed is comparatively warm in winter, and it is the coolest place in town in the hot season, while the open-face yard is the hottest place in the town. But while it is the coolest, the closed shed is the dirtiest when the winds blow, and beyond the Missouri this means more or less of it every day of the year. People out there don't mind it when in the open, for it is accepted as a feature of their living conditions which cannot be gotten away from. In a closed shed, however, it is partcularly annoying when the winds comes from the right direction to make it so. As the dust is blown in it stays there. You never see the wind blowing it out again, and practically all of it remains on, in, and about the lumber piles, and stays there. Probably a ton of dust is blown into such a shed during the year.

Keeping Dust Out of Sheds

In dry weather, its effect on the lumber is only to stain it, which is no injury, except perhaps to portions of the finish stock that is slow moving. But when damp weather comes the lower parts of the piles having a larger accumulation of dust, are prevented by it from drying out, for it closes the pores of the wood and remaining long enough in this condition decay begins. This is the reason why the bottom layers in piles of slow moving stock are found to be damaged when taken out. The piles of such stock should be moved before they get black, and the bottom layers put on the top part of the pile. A good deal of dust can be kept out of these closed sheds by exercising a little care in keeping the doors closed on those days when the wind is more direct to the ends of the shed where the doors are. A plank driveway should be frequently swept, but this is hardly practical with a dirt floor. In this case an application of common salt scattered over it will keep the dust down materially. When it is possible to obtain the crude oil that is used in surfacing hard roads, a coating of this will be better than anything else.

I was in a country yard last summer that has all its alleys and shed driveways paved with hard brick. It was a warm day and one of the yardmen was using the hose for flushing them. This was a daily practice, serving to keep them clean and cooling the atmosphere in the shed on a warm day. I noticed, too, at this yard that the shingles were piled on end and in spells of dry weather the hose was turned on them to keep them in better condition for use.

Many country towns now have water works systems and doubtless the lumber yards in these places have the water piped into them. If they have not, they ought to have it, for it is a great convenience in keeping down the dust as well as being mighty handy in case of fire. Such a thing as this would have been considered a great luxury in the old time country yards in which the dust was swirling in the alleys during the greater part of the day and no letup in it for weeks at a time without rain. Those old yards were little less than a torture to work in on a blazing hot day with a thirty-mile wind swishing the dust up and down and all over you. There were no bath tubs either in those days such as we have now. And those little dinky offices we used to have, clean them out in the morning and before noon everything inside would be covered with the dust blown in from the street. You can imagine what a nice (?) place it was to write up the books on those blistering, dusty days of the year. A finicky man was out of place in a lumber yard in those times.

Giving Attention to Green Stock

A good deal of green lumber has been shipped to the retail yards during this period of stock shortage. The mills had no time to dry it properly before shipping and in many cases it came to the dealers in bad condition. In warm weather lumber that is not dry before loading in the car, will be more or less stained in transit, especially yellow pine that is sappy. I have seen carloads of common stuff and two-thirds of it was black with mold. No amount of drying will brighten it again. Although it does not injure the strength of the wood, it is not so saleable as light lumber. A dealer has no pride in showing a customer such looking stuff. If it is very soggy the thing to do is pile it right away with a strip between every two layers, if it goes in the shed. Every second layer will do if piled outside in warm, dry weather. Finish lumber that is not dry should be stripped every layer. The worst pieces should be stood on end before going into pile, and reversed, as the top end will dry out sooner than the bottom. This is something that but few dealers are aware of. Any of you can verify it by taking two or three pieces of soggy dimension and standing them up under the shed, putting the bottom end on a piece of board. You will be surprised how quickly they dry out, and furthermore, the pieces will not warp as they are liable to do if laid flat. Sometimes you may get in some 2-inch finish that is not in condition for use at the time. Stand it up on end as suggested and it will be ready for use in a few days. You can apply this idea also to any stock coming in bunches. Stand the bunches up for a few days and they will be fit to go into pile.—C. H. Ketridge in the "Mississippi Valley Lumberman."

Applying Stock to Customer's Need

"When a man comes into your place of business for material," says a wise lumber dealer, "the first thing to find out after the initial greeting and learning his requirements, is, what he is going to build. It is a common habit for a customer who wants 2 x 4-8 to drive up and call for 16's, or, if he is going to cut the stuff into 4-foot pieces, nine times out of ten he will ask for 12's, and so on, and the same way with inch stock and other dimensions, and when the yard man becomes impressed with the value of finding out and gets it to working, I figure he is coming along.

"This not only helps you to work off short stuff, and odd and cull items that may fit his wants completely, but you are saving the customer money and convinces him that you have his best interests at heart. When a man comes into your yard and calls for 18's, and you are short of 18's but long on 12's, you have done a real stroke of business when, by asking, you discover that he is building a chicken coop and wants to cut those 18's, into 6-foot lengths, so you sell him the 12's instead of the 18's. Finding out how you can apply your stock to the customer's needs certainly helps keep down the investment in times like these, when it is keeping the yard man jumping sideways trying to finance his business.

"Not only will you often find that you can supply the farmer's needs with shorter lumber than he originally asked for, and thereby save him money, etc., as above stated, but generally you also find that the lengths you prefer to sell him and which he can use will 'ride" his wagon much better than the long lengths he wanted to buy and cut up. This itself is a good argument many times.

"I keep all our crooked lumber cut up into short lengths, where the crook makes less and probably no difference to its value, and we keep this stock handy and "ready" to be shown and loaded, and its very convenience and readiness is sometimes effective in creating a sale for it. Anything that does not come up to standard for short length lumber we use for various purposes, some of it for crating, etc., while the actual waste we bind up in bundles and sell for kindling, thus using up every scrap of every size."

There is a whole lot of good experience and profound wisdom in the previous statements. It is undoubtedly being more thoroughly demonstrated every day that the man who knows, first, his own stocks and their uses; and, second, who finds out exactly what his customer needs, instead of only what he says he wants, is in splendid position to better serve his trade and profit himself.

Price Cutting Said to be Ended

The price-cutting campaign, which was inaugurated about two months ago, seems to have come to an end. It cannot be said that there is any immediate prospect of a return to the high levels from which the decline started, but it is unlikely that the decline will continue except in occasional instances, says a recent despatch from New York.

While it is probably true that the peak of high prices has been reached and passed, the opinion prevails in high financial circles that the world is not in a position for a rapid price decline. The United States alone is carrying a burden of new Government indebtedness of approximately $25,000,000,000, representing capital which should have gone into railroads and other construction and development work.

The advance in prices of the past year has not been due to profiteering alone, but has been largely due to the scarcity of goods and service of all kinds. While this check upon high prices is wholesome and desirable, it does not signify that the country has got back to a point where there is a normal relationship between supply and demand.

There may be some further reductions in prices of commodities, but there will also be some advances, particularly in food products and cotton textiles. The probability is that we have reached the end of runaway markets, and that whatever advances do occur will have to show themselves to be fully justified. Every advance in a commodity will be watched and carefully inquired into. The public are in no mood to accept gouging of any kind.

Joins the Lumber Selling Ranks

D. H. Johnston, Woodstock, Ont.

D. H. Johnston has taken a position with P. L. Canfield, wholesale lumberman, Woodstock, Ont., and entered upon his new duties. He is now making his initial calls upon the trade in Western Ontario.

Mr. Johnston is a native of Belwood, near Fergus, where his parents still reside. He was educated at the High School in Fergus, and six years ago entered the Imperial Bank in that town. Subsequently he was transferred to Woodstock, where he occupied a responsible position in the institution until September, 1919, when he was appointed manager of the branch at Belwood. During the past summer he was in charge of the Crystal Beach office of the Imperial Bank. Mr. Johnston, who has now left financial circles to enter the arena of lumber selling, is 22 years of age and a bright, promising young man. He attended the annual outing of the Wholesale Lumber Dealers' Association at Grimsby, where he met a large number of friends in the industry. Mr. Canfield's business has been growing rapidly of late and it was necessary for him to have assistance. Mr. Johnston will remain in the office when Mr. Canfield is away, and when the latter is at home Mr. Johnston will make calls on the trade, so that continuity of service is assured.

No Reason for Stampede in Prices

There has been a noticeable decline in the sale price of spruce all over the east for the past three or four weeks, which has caused some wholesalers holding large stocks to become stampeded into offering some stocks at too low a figure, as compared with actual costs, say the Rimouski Lumber Co. of Rimouski, Que., of which J. H. Poulin is the manager.

Several wholesalers who purchased stocks at as much as $12.00 per M under the price that they would have to pay for spruce to-day, can afford to let a good lot of stock go without any real suffering, but the question arises, where are they going to replenish their supplies to keep up with a decline which they are themselves creating.

The costs of logging last winter and labor this spring and summer has not created a condition of cheapness in lumber. The usual summer stagnation is with us of course, which also helps the retailer who wants to buy now to get stocks for less than they are worth.

We are all trying to imagine a drop in lumber, but like a dollar in one's mind, it goes no farther than the imagination. Like pulpwood lumber will not be lower than it is within a few weeks and the retailer can expect to pay handsomely for having sat wisely back, awaiting the great saving he expected would come by not buying presently.

There is no reason for cheap lumber during the balance of the year. People must be housed and will be at any cost, and from our point of view we may expect a stiffening in the market that will make to-day's prices certainly look very cheap.

The Responsibility of the Retailer

A retailer is responsible for the statements he makes as to the quality of goods he sells whether he is merely repeating the statement of a manufacturer or not. It behooves retailers, therefore, to be certain as to the accuracy of descriptions which are given by manufacturers whose integrity might be doubted. Such a warning was recently issued by H. J. Kenner, secretary of the National Vigilance Committee of the Associated Advertising Clubs, and was given wider circulation among California merchants by one of the Better Business Bureaus (vigilance committees) out there.

In the case in point, a retailer had taken refuge behind the fact that the goods he had advertised had been misrepresented to him.

"The Retailer," said the National Vigilance Committee, "is held responsible morally and legally (in most states) for the accuracy of the statements appearing in his advertising whether or not he merely quotes representations made by the manufacturer from whom he obtained the merchandise. We had an interesting case in court in Minneapolis, when I was secretary of the Better Business Bureau there, in 1915. We arrested a clothier for advertising all wool shirts which were not all wool, but were almost entirely cotton, and as a defence he brought into court his bills from the manufacturers, showing plainly that these shirts had been billed to him as all wool, and he merely advertised them in the same way. The court held that that was no defence; that he should have known whether they were all wool, and unless he was absolutely sure of it he should not have advertised them as such.

"Of course, if the retailer has knowledge that the manufacturer is wrong, and he goes ahead with a mis-statement, that is a fraud clearly, and even if a retailer hasn't knowledge that the manufacturer is wrong and quotes a manufacturer without making some effort to check up, the retailer can be held responsible legally. The retailer is looked upon by the buying public as a specialist and expert in the various kinds of merchandise which he sells and the public relies upon him to set out all of the facts truthfully with respect to his merchandise and holds him responsible—and has a right to hold him responsible. The public has a right to believe exactly what it reads in advertising and to act upon that belief.

"The retailer is and should be held responsible for all of the statements appearing over his signature in advertising. If he does not know that they are mis-statements he should make it his business to know.

Pikers Spend Gala Day at Espanola

The Michigan Pikers' tourists were recently the guests of the Spanish River Pulp & Paper Co. at Espanola. W. J. Hussey, general superintendent of the plant, entertained the entire party at Apsley Lake to lunch, after which fishing was engaged in and a tour was then made of the big paper mill, where 290 tons of newsprint are turned out daily. The members were astonished to learn how the spruce tree is ground into pulp and turned out as white paper for the daily journals. The party left Espanola for Blind River and Thessalon. The pikers announced that the road from North Bay to Espanola was the poorest that they had encountered in Ontario. The five-ton trucks on the tour broke through four bridges and one culvert before getting to Espanola. The experience is considered as a good omen for a stronger business.

Will Build Big Power Dam

The development of the Gatineau Valley by the Riordon Company, Limited, which has absorbed the Gilmour and Hughson and C. E. Edwards Company interests, will proceed soon. Notices have been received by the residents of Chelsea Island, a few miles from Ottawa and opposite Chelsea, Que., to quit their cottages by September 30 next, in view of the proposed developments. The cottages are rented from the Gilmour and Hughson interests, and have been used for many years as summer residences.

It is stated that the big power dam at Chelsea, which will raise the level of the river over twenty feet, will be started this fall or early next spring. This dam will create an enormous amount of power, and will raise the river as far up as the Cascades, that is, seven miles. Chelsea Island will be several feet under water when the river is finally raised by the dam.

It is said, moreover, that the river will be so high, once the dam is built that the road up the Gatineau, and also the railway tracks in the neighborhood of Kirks Ferry, will be flooded by the new level, and will either have to be elevated or rebuilt on higher ground.

The seven miles of still river which this dam will create will be used as a reservoir for pulp wood.

Holds Record for Load of Lumber

According to the reports of past records of the Canadian Robert Dollar Company, the S.S. Robert Dollar, an 8,800 ton standard Robert Dollar type of freighter, holds the record for a deckload of lumber out of British Columbia ports. Though the load of 870,000 feet of lumber on the deck of the S.S. Canadian Prospector, an 8100-ton ship is a very high figure, the Robert Dollar claims the palm.

In 1914, under command of Captain R. L. Norton, now shore superintendent for the company, the Dollar ship loaded one million and fifty thousand feet on her decks, at the port of Genoa Bay. The lumber was piled 17 feet high. All told the ship carried 4,990,000 feet. Both cargo and deckload are believed to be Canadian records.

Market for Prairie Pulpwood

A recent despatch from Regina says: An offer for pulpwood at a price of $12 per cord f.o.b. cars, Fort Frances, has been received by the Bureau of Labor and Industries. An inquiry will now be instituted as to the freight rates, points of shipment and other features with a view to finding a market if possible for the great quantities of this wood being cleared from the settlers' holdings in the northern part of the province. At present this wood is being destroyed, and a market would prove a source of revenue for setlers during the years the land is being cleared and before a crop can be secured.

Why Don't You Write?

By J. C. Hemming

Why don't you answer letters? Yes, YOU who are a careless correspondent and deliberate delinquent.

Are you busier than other people who reply promptly and pleasantly to all correspondence, or are you simply negligent, self-centered, narrow, short-sighted and of the dont-give-a-continental-cuss attitude?

You may swing along this way for a period but eventually you will lose social and business friends, life-long associates and worth-while acquaintances.

Of course, you like to get letters of the true, friendly type that are like a breath of fresh air or a bright spring morning, but apparently, you do not want to play your part.

The fifty-fifty proposition closely approaches the Golden Rule, but you would make the odds one hundred to one; in other words, you take all the epistolary toll and let others do the work; you reap the joy and they the pains.

Perhaps they write you once, two or three times and still no response. What kind of a moral and mental make-up have you?

If you should ask someone a civil question and receive no answer, then repeated the query and still no reply, what would you think?

You would consider yourself the victim of a downright insult and feel inclined never to recognize again such an offender.

This observation refers to oral matters, but how much greater is the misdemeanor in the line of correspondence. The written word carries more weight and is of more significance and import than the spoken.

"Why don't you write?" exclaim some. You take occasion to do so—several times—and then lose faith in the would-be correspondent for not acknowledging communications or regarding so lightly and selfishly the obligations of courtesy and custom.

The world has little use for the gusher and the glum, the flouter and the flirt, the egotistical and the envious, the oppressor and the obdurate, the liar and the loafer and a score of other characters that are all too painfully present in this rushing, restless age.

Is it not high time that in this comprehensive category there should be included he or she who never takes the trouble to answer a letter?

They, who desire to have genuine friends must first show themselves friendly. Social and business correspondents who persistently pass up everything in the way of written message, may awaken to find themselves occupying a niche of complete isolation in the esteem, affection and goodwill of their fellows.

Sooner or later the world places its stamp of approval on sincerity and worth, and we are coming to that stage where it will refuse to countenance the indifferent and indolent correspondent.

Get a Transfer

If you are on the Gloomy Line
Get a transfer;
If you're inclined to fret and pine,
Get a transfer
Get on the Sunshine Train, there's room
Get off the track of doubt and gloom
Get a transfer.

If you are on the Worry Train,
Get a transfer;
You must not stay there and complain
Get a transfer;
The Cheerful Cars are passing through
And there's a lot of room for you,
Get a transfer.

If you are on the Grouchy Track,
Get a transfer:
Just take a Happy Special back,
Get a transfer:
Jump on the train and pull the rope
That lands you at the Station Hope,
Get a transfer.

If You Should Die To-Night

By J. C. Dionne, in Gulf Coast Lumberman

Did you ever stop to ask yourself that question, Mr. Lumberman?

Did you ever sit down and try to itemize honestly and without bias the things YOU have done for the lumber industry, and look yourself squarely in the eye and tell yourself the truth about the matter?

Remember the story of Jones, who was showing his visitor Smith around town. They passed a portly gentleman who bowed condescendingly to Jones, yet whose condescension seemed to please our friend. When the big man passed from earshot, Jones remarked rather proudly to his guest:

"That was Jim Bond. He's worth FIVE MILLION DOLLARS."

And Smith, who had looked Bond over, and who was something of a human nature judge, asked, dryly:

"Who to? Himself, or the town?"

And the world, and the lumber industry, is well supplied with men whom their fellows frequently call "successful," of whom Smith's question might pertinently be asked; and there could be but one answer—"HIMSELF."

Men of utter selfishness. Men whose only aim and only ambition is to get together as many dollars as possible, and to hang onto them—"Until death do them part."

YOU know some of them. We all do.

Let's suppose that one of them had just died and we are writing his obituary. NOT a regular obituary. An HONEST obituary; doing him no whit of injustice; merely telling the truth. It reads like this:

"Jim Bond, President of the Bond Lumber Company and associated interests, died last night. He had been in the lumber business thirty years, and left an estate of FIVE MILLIONS OF DOLLARS. He took this huge sum OUT OF the lumber industry. He put back NOTHING. Not a thought; not a deed; not a constructive act; nothing whatever that served to make the industry better, or the world more fit to live in. He did NOT believe in co-operation. Those fundamentals of the industry without which there could have been NO INDUSTRY, he did NOT support. The foundations and the superstructure of the lumber industry—essential to the very EXISTENCE of the industry—knew neither his assistance nor his help. He boasted of the GRADE of his lumber, yet he never supported those institutions whose grading rules he used. When things arose that required the co-operation of the stalwarts of the industry, Jim Bond was missing. He was too cautious, too stingy, too narrow, too short of vision, to appreciate the big things of LIVING. The idea that he had a PART TO PLAY in the industry; that he OWED A DUTY to the industry; found no place in his soul. If all men acted toward the world as Jim Bond did toward the industry, mankind would still be savage, living in caves, clad in the skins of wild beasts, and knowing no God. Jim Bond is GONE; like a derelict sinking in the fathomless depths of the sea, leaving no trace behind to mark where once he was. And no man can look back over his life and say —'THIS is what he did for the lumber industry.' "

Know any Jim Bonds, Mr. Lumberman?

Think that question over, once in a while. If you dropped off to-night, could it be said of you that you had left a constructive mark on the industry that has supported you? That it is better off because of YOU?

Work hard to keep from being a Jim Bond. So live that the world could say if you went to-night:—

"IT'S A BETTER INDUSTRY AND A BETTER WORLD, BECAUSE OF HIM."

The Pine Tree

My purpose is undivided—one straight tall shaft, rooted on firm earth, but pointing to the highest Heaven.

My range unlimited—happy in the icy North, the last outpost of life—living bravely above the snow line—undaunted by any region or clime—thriving under the tropic sun.

My branches extending North, East, South and West—I know no limits to sympathy, no race, or creed—I am the symbol of Brotherhood.

My green is Immortality. Amid the dead I symbolize Life.

My balsam resists decay—its fragrance is Love.

My spirit is the Balm for the Healing of the Nations.

The Incompetent Dear at Any Price

Mark Rogers of Parry Sound, Ont., states that his cut of lumber this season will be about 50 per cent. larger than in 1919. This year he will take out fully 12,000 ties and declares that he has had no difficulty in getting logs, having had very good service form the railways on all shipments.

Mr. Rogers thinks that the advance in the price of lumber since last year has been in ratio to the advance in the cost of production. Referring to the labor situation he says that he has been able to get plenty of men—a fairly good mill gang and a few other good men, and there is the drifting gang that stay from two to five days. These drifters, he adds, are seldom good men, but help out in a pinch. A few days ago he started six of them in the morning, one stayed about ten minutes, another was gone by noon and a third before night and he was not sorry as they were of little use.

Touching upon the wage question Mr. Rogers remarks: The high rate at the present time is not the worst thing we have to contend with. Many of the men are unskilled, and not a few are simply time servers. Good men who will work are not receiving too much money, under existing conditions. Too many fellows at the present time are endeavoring to make a living without being producers. I avoid, as much as possible, any friction with my help. When wages go up I try to raise mine before the men demand it, that is, the workers who I think deserve it. Others, if they do not like what they are receiving, may go, as the poor man—by that I mean either the lazy chap or the incompetent—is nearly always dear at any price.

Movement to Standardize Invoices

A committee appointed by the National Association of Purchasing Agents has been at work a long time devising better standardization methods, and is now giving its attention to standardizing invoices, as to size of the sheet, kinds of paper, and the arrangement of the data on the invoice. The regulation of sizes is for the purpose of making possible better and more compact filing. It is expected to do away with the large number of odd sizes and shapes of invoices and to substitute a few which should be of convenient size and form. The committee favors the master size for the invoice to be 8½ x 7 inches. This size is now extensively used. Two additional sizes have been adopted tentatively, 8½ x 11 inches and 8½ x 14 inches. These will fold conveniently for filing in many of the cabinets and devices now in use.

It is urged that paper on which invoices are printed be restricted to one weight, either 13 or 16-pound stock; and that original invoices, and originals only, be printed on white paper. This is intended to prevent the payment of duplicate invoices by error, since the paper's color would at once show whether it was an original or duplicate.

A change in the usual manner of making out the invoice form provides that the quantity of each article appear on the right side of the sheet instead of on the left, next to the price of each. This is for the convenience of those who have to check the items. Such invoices, or copies of them, are often filed in binders, and if the items are on the left, they may be concealed by the binder, or so near it that it is difficult to read the items.

The commitee is still at work, receiving and considering suggestions, and it is the intention to bring the matter up for action at the meeting of the National Association next Ocober.

Does It Always Work Out Like This?

Writing to the "American Lumberman," a resident of Springfield, Ill., says:

Facts are better than fiction. Following is a statement of facts:

I would prefer to eliminate the names of the interested parties, but should any one be interested enough to care to know, I can give the names and all in detail.

Last October, 1919, a reputable contractor in Springfield figured a house bill with us. The owner, naturally desirous of obtaining any competition that he would consider legitimate, took the matter up with one of the mail order "ready built" house concerns. After getting all figures together, the owner was convinced he could save some money, and following a conference with the contractor, placed an order by mail for his "ready built" house.

Now the interesting facts appear.

The job was to have been completed inside of sixty days. The owner was paying rent, and wanted to move early, prior to the extreme cold weather setting in. In his calculations, the owner overlooked the expense of excavation, brick work in the foundation, the building of his flue, plastering, and other items which the "ready built" house price did not include.

In February, 1920, the contractor began calling on us for materials that were short. Since then he has occasionally called on us. The building has been under way now for eight months. The contractor was in our office to-day, and has just told me that all deliveries have not been made. There are still due and unshipped, the bath tub, the sink, and some of the other items. As to when they will be delivered he does not know.

He told me that the owner and himself are both very much disappointed over the outcome. Delays in deliveries have been serious, the expense has mounted up much higher than was anticipated, and he further stated he and the owner are of the opinion that everything considered, the place is standing them over one thousand dollars more than had they bought the materials in Springfield at the prices quoted.

Allow me to state further as to what also often happens to many of our customers who figure bills with mail order houses and "Ready Built" house concerns. Usually opportunity is given us to set before these customers all facts and figures, and proper comparisons. My candid opinion is that over 90 per cent. of the building materials used in Springfield are furnished by Springfield dealers. The less than 1 per cent. that is purchased outside has caused enough dissatisfaction and expense to maintain these percentages.

Gas Masks for Forest Rangers

Necessity taught the English and Americans the use of gas masks. Now these same accessories of war have been put to use in fighting attacks of the destroyer in nature.

A severe forest fire in Glentanar Forest, Aberdeenshire, Scotland, fed by a high wind, raged for days. On the fourth day a veering wind gravely endangered the mansion house of Lord Glentanar, and the village of Aboyne was threatened. Lord Glentanar, who had kept an all-night vigil, following his hurried journey north from London, was called upon to decide quickly whether, in the hope of checking the spread of the fire to the woods of Craigendinnie densely planted with old Scots pines, he would sacrifice another strip of valuable wood at the edge of Knosikie Hill by burning it in advance of the colmun of flame.

He immediately gave orders to withdraw those battling against the advancing fire and to burn the wood uphill. Thus the advance of danger toward the township of Aboyne was stayed, but further off in the depths of the main forest a fierce blaze still roared and crackled.

Subdued at one point, the fire broke out in another, and mobile parties were sent speeding hither and thither to centres which sentries posted on a tall watch tower signaled as being alight. Thus the day was one of alternating hopes and fears. Once came a shout of victory, as over a stretch of three miles a wall of fire was beaten down. But later this temporary success was nullified by a more vicious outbreak further south.

New Creosoting Industry for Sudbury

Work has been started on the erection of a plant at Sudbury, Ont., by the Canadian Creosoting Co. The purchase of the required land involved $60.000, and options were exercised on 147 acres of land along the Soo branch of the C. N. R. and the Copper Cliff-Sudbury Road. The plant will have a capacity of two million railway ties a year, and will treat bridge timber as well. Two hundred men will be employed. They will treat ties and timber from as far West as Fort William, after which they will be distributed to the Eastern Ontario divisions of the C. P. R.

Use of Esparto in Paper Making

During the European war the scarcity of paper pulp in the Spanish market, caused by the difficulty in securing supplies bordering upon the Baltic coast, caused Spanish paper makers to consider the use of esparto to supplement the import supply. Esparto grows throughout extensive districts in the south of Spain, and a poorer quality is found on large areas of poor and sandy lands in Algiers and Tunis. Esparto fiber has been used for centuries in Spain, and the manufacture of matting, baskets, and cordage exclusively of esparto dates from the time of the Moorish occupation.

New Position for Forest Engineer

O. M. Porter, instructor in forest engineering, has resigned from the New York State College of Forestry faculty, Syracuse, to go to the American Pulp and Paper Association, as assistant to Dr. Hugh P. Baker, former dean of the College of Forestry. The resignation is not only one more evidence of the manner in which the industries are looking to the forestry profession for men for practical business life, but will mean the placing of one more trained forester in the paper industry which offers great opportunity for the practical application of forestry principles.

The Decennial celebration of the Forest Products Laboratory in Madison, Wis., was held recently. There was a large attendance and a most interesting programme was carried out.

Jottings and Views in the Pulpwood Arena

The Pulpwood Supply of Canada

James White, assistant to the Commission of Conservation at Ottawa, has written to the press taking issue with a printed statement to the effect that it would take 344 years to exhaust the Canadian pulpwood limits at the present rate of consumption. He says:

'A revised estimate by the commission, based upon the best available data from all sources, places the total of spruce and balsam, the species primarily used for news print, accessible and inaccessible, at 501,000,000 cords, for eastern Canada. That which is accessible to existing transportation amounts to 421,000,000. With reasonable deduction for diameter limit restrictions, loss and waste in logging and stream driving and for merchantable material left uncut and which will be lost through insects, decay and windfall the total on the basis of potential delivery is 301,000,000.

"This includes 100,000,000 cords in Ontario, 18 per cent. private; 155,000,000 cords in Quebec, 14 per cent. private; 26,000,000 cords in New Brunswick, 46 per cent. private; and 20,000,000 in Nova Scotia, practically all private. As nearly as can be determined from census statistics the total of lumber and pulpwood consumption and pulpwood exports of spruce and balsam from these four provinces was in 1918, 5,500,000 cords, or 55 years' supply in eastern Canada at the 1918 rate of consumption, and the rate of cutting is increasin."

May Use Hardwoods for Pulp

It has always been the hope of pulp and paper men that some method would be discovered whereby hardwoods might be used for the manufacture of pulp. At the present time the forests of the province are undergoing a change. All the soft woods are being cut out and the hardwoods left standing, with a result that the latter flourish exceedingly. There are immense areas almost entirely covered by hardwoods and if some method could be discovered for utilizing this in manufacturing paper, great reserves of raw material would be available. The Laurentide Company of Grand Mere, Que., is now planning to experiment with hardwoods for this purpose. The company has large hardwood holdings, estimated to contain 1,000,000 cords of available timber. L. A. Nix, of the company's Forestry Department, is now on an exploration trip over this area. The company, using Mr. Nix's report, has plans to use about 1,000 cords of the hardwood for experimental purposes in the ground wood department of the mill next winter.

Where Pulpwood Goes Begging

A despatch from Victoria, B. C., says: Here is a pulp proposition dished with all the trimmings. Where are the men with capital and vision who are going to engage in this enterprise. It then proceeds as follows:

In the country contiguous to Prince George there lies idle about twenty million feet of available pulpwood, as indicated by figures supplied by the Department of Conservation at Ottawa, as follows:

Nechaco and Blackwater Drainage area	4,478,400
Willow and Bowron Rivers	7,761,600
Paper Fraser River	10,420,800
Stewart, Salmon and Nation Rivers	6,959,600

One cord of B. C. pulpwood on the average makes 1,660 pounds of pulp, or one ton of pulp requires 12 cords of wood. It requires on an average about 65 horsepower per ton of pulp manufactured, so that for a mill of 100 tons capacity, which is a medium size, 6,500 horsepower would be required.

Travelling along G.T.P. from Prince George for hundreds of miles east and west, the country is green with timber, and far up the valleys and stretching back to the hills this timber stand continues.

Whalen Pulp Mills Had Successful Year

A marked improvement in the statement of the Whalen Pulp & Paper Mills, Vancouver, B. C., is shown in the annual statement covering the financial year ending February 29 as compared with the preceding year when a deficit of $337,729 was recorded. The past year, however, has seen a reduction of 17 per cent. in operating expenses while gross earnings gained $600,000, the net profits being $323,000, notwithstanding the fact that one of the plants was closed for six weeks following the signing of the peace treaty.

Reference to the balance sheets of the last two years indicates a gain last year of $1,673,805, in net liquid assets. Total assets now stand at $18,420,831 of which $16,000,000 is in plant, land, buildings, waterpower and timber limits. The company has one of the best managed pulp plants in British Columbia all of which is under the very able direction of Sir George Bury.

The various mills are being steadily improved as regards equipment, and a sum of $193,000 has been set aside for Woodfibre, Swanson Bay and Port Alice and improvements in plant and transportation. Last year the company produced 47,692 tons of pulp, 12,731 (m. feet) of lumber, 1493 (m. feet) of boxes and 61,198 (m. feet) of shingles.

Building Up Market with the Orient

The announcement from Vancouver that Sir George Bury was retiring from the position of presidency of the Whalen Pulp & Paper Company, Limited, was not unexpected. Indeed, those in close touch with the company state that the services of Sir George were secured more for the purpose of placing the organization on a firm basis than with the hope of retaining his services in that capacity for a period of years. The report of the company, as given in these columns last week, indicates in a measure, the success Sir George has attained. His initative in the matter of going to the actual sources for a market for his company was indicated by a statement made last week by the Canadian Trade Commissioner at Yokohama, Japan, E. A. Bryan, who declared that the representative of the Whalen Company was the only one from Canada as far as he knew who had gone to Japan to find a market there and make arrangements for export either of pulp or paper to that country. The Whalen Company export nearly all their production of sulphite pulp to Japan, and would appear to be firmly established in that market. One report is that Sir George may become associated with the new British Empire Steel Corporation.

A report from the West states that American interests may secure control of the Whalen Company at the annual meeting. The opinion in the East is opposed to this, as it is felt that control practically rests now with Canadians and will remain there. The Whalen Company has three plants in British Columbia, at Millcreek, at Swanson Bay, and Port Alice.

Province Gets Refund on Pulpwood Dues

It is reported that as a result of the evidence given before the recent timber probe commission at Port Arthur, that the James Hourigan Lumber Co. has remitted to the Ontario Government between $13,000 and $14,000 arrears. At the sitting of the Commission, which took place recently, it was shown that the company was owing this much in connection with Government dues on about 18,000 cords of pulpwood. It is said that other companies will shortly make similar settlements and that some of the adjustments will be for larger amounts. Any refunds that may be made, while accepted by the Government, do not necessarily close the transaction, as the provincial authorities retain the rights to institute proceedings against the company if warranted by the evidence.

Provincial Company is Expanding

The Port Arthur Pulp & Paper Co. has now been taken over by the Provincial Paper Mills, Limited, of Toronto, as part of its organization. The plant at Port Arthur has been in operation fo rthree or four years and is now turning out about sixty tons of sulphite daily, half of which is bleached. The total book, writing, bond and ledger paper capacity of the Provincial Paper Mills Company mill, at Mille Roches, Thorold and Georgetown, is from 90 to 100 tons a day and in coated paper 15 tons. It is said that the Provincial Paper Co. intend erecting at Port Arthur next year a new book paper mill.

Important Judgment Affecting Pulp Mills

An important judgment affecting pulp mills has just been delivered in the Superior Court in Montreal by Justice Maclennan. This was in the long-standing dispute between Albert Joseph Brown, K.C., and the Canada Paper Company of Windsor Mills, Que., the court finally granting an injunction commanding the paper company perpetually to refrain from using sulphate of soda or any other obnoxious compounds calculated to give off objectionable odors, in the manufacture of pulp and paper at the company's mills at Windsor Mills, Que.

Mr. Brown is the owner of a summer residence at Windsor, and he complained in his action that he has been deprived of the enjoy-

Recent view of Laurentide Pulp & Paper Company's mills at Grand Mere, Que., showing in detail many of the new buildings. The picture affords some conception of the vast increase in building that has taken place in the last few years.. The water tower at the company farm and the houses on the right across the river can be made out in the background.

ment of that residence owing to the disagreeable odors emanating from the defendants' works through the use of the chemical complained of.

The residential property in question has been in the possession of the Brown family since 1801. It is situate in grounds covering fifty or sixty acres. There have been considerable negotiations between plaintiff and the company with the object of effecting a remedy, and an offer was made to purchase plaintiff's property.

The case for the defence was that the discharge of gases from the mill was not injurious to health or vegetation. The process of manufacture of pulp and paper adopted by the defendants was described as one of the most modern. Carbonate of soda had been used up to 1908, but now the use of sulphate of soda was the only process that enabled their mills to compete with imported pulp and also the pulp largely manufactured by this process in this country. It was submitted that there was no known process commercially practicable for removing all, or even the major portion of the so-called bad smelling compounds and fumes from the discharged gases of sulphate pulp. And it was repeated, there was no menace to health. If an injunction, either interlocutory or permanent, were to issue to compel the company defendant to refrain from the further use of sulphate of soda, defendants said they would have to close their chemical or pulp mill and also a portion of their paper mill.

Judge Maclennan found that "nauseating, offensive, disagreeable and sickening gases and vapors, odors and smells difficult to describe" emanated from the mills and caused illness and discomfort to inmates of plaintiff's house and to other inhabitants of Windsor Mills, and held that these detracted from the enjoyment of his property to which plaintiff was entitled. He therefore issued the injunction.

Will Straw Duplicate Pulpwood?

Plans are being made for the establishment of a $1,000,000 paper mill in southern Saskatchewan and large financial interests in Toronto are said to be behind the scheme. W. R. Phillips, a former Mayor of Trenton, Ont., is making a preliminary survey of the territory around Regina, and according to him it has been found from experience that two tons of straw and two tons of coal can be manufactured into one ton of paper. The new industry will utilize thousands of tons of waste straw in Saskatchewan, which heretofore have been burned up. The mill will be located in close proximity to an adequate supply of cheap coal, which is one of the essentials in the location of such a plant. It is believed by the men behind the scheme that the lignite fields of southern Saskatchewan offer the necessary fuel equipment.

Trump Card of the Dominion

"Canada's pulp and paper industry is now one of her trump cards," declared James White, deputy head of the Commission of Conservation of Canada, when he addressed the Rotary Club at luncheon in the Fort Garry hotel, Winnipeg, recently. He gave an interesting outline of the commission's work in the forest division, and what it proposes to do in order that the industries dependent upon the forests may continue.

At present there is a great scarcity of forest products, he stated. The crux of the situation was in the fact that the publishing business in the United States had reached proportions that could not be supported by the forests of the country and had turned to Canada for wood supplies. "Within a period of thirty years," said Mr. White, "we have witnessed the phenomenal rise of the pulp and paper industry. According to the latest figures, it represents an investment of over $250,000,000 and gives employment to 25,000 persons in the manufacturing end alone. Last year pulpwood and paper exports from Canada were valued at $113,000,000, of which nearly 80 per cent. went to the United States. Canada today manufactures more than two-thirds of the newsprint used in the United States."

In order that Canada may continue to supply this large proportion of the newsprint requirements, and in order that the industry may expand and become more profitable, Mr. White pointed out, forest management must be practised in the most efficient manner. In the eastern states there has been a record of depletion and exhaustion of timber supplies. As a prominent New York publisher recently explained before the Advertising Club of Cleveland, if the growth in advertising which has taken place during the last two years were continued, in ten years the United States and Canada would have depleted the forests of America.

"For over a decade," he said, "the commission has been attempting to study the facts in regard to the extent and use of our natural resources so that public opinion may act on the facts as they really exist. The only proper way to conserve any resource is to develop it to the point of highest productivity, and with the maximum of efficiency, and to use every means to maintain its productivity at that pitch."

Mr. White told of the work of surveying the timber resources of the Canadian provinces, and of the efforts to preserve forests from destructive fires, that had been made by the commission. "The losses from forest fires have been positively beyond computation," he said. "Fully one-half the areas in Canada that are fit only for growing trees, have been run over by fire, and the majority of the trees killed or injured. Fires repeatedly sweep the same area, and these repeated fires kill the young trees that are to make the future forest, and the seed trees that, if allowed to live, might replace the destroyed young. One area examined by our foresters had been burned over seven times in 25 years."

The commission, he explained, had initiated legislation which was to deal with fires caused by railway agencies—a factor of enormous importance. Their efforts had been supplemented by independent commercial and educational organizations. Every administrative department in the government charged with the management of timbered areas, is today engaged in the campaign to prevent and control forest fires.

"Forest conservation," concluded Mr. White, "affects the pocket book of practically every member of the community. The man who builds or rents a house, buys a book or paper, or uses advertising space is affected. Every many who has money is one of the 80,000 employed in such work is also vitally interested in conservation."

Press Getting After Fort Frances Co.

Thirteen western newspapers have entered suit against the Fort Frances Pulp & Paper Co. of Fort Frances, Ont., for a declaration that certain judgments or orders of the Paper Control Tribunal are valid and binding on the defendant, and to enforce the same, and for payment of all sums due by the defendant to the plaintiff. The amount involved is about $122,000, the largest claim being that of the Manitoba Free Press, for $52,259. The writ in connection with the suit was issued in Toronto during the past week.

WHERE SAUSAGES GROW ON TREES

In Rhodesia, Africa, sausages grow on trees, thus reducing the high cost of sausages in that land. The growth is a pod with a shell not unlike that of a garden pea, only it is twenty times as large. The tree is called the "sausage tree." Before there is a rush to this land of the growing sausage, it might be said that this tree "fruit" does not come up to the requirements of the pure food law for sausages.

What Constitutes Dry Rot?

The term "dry rot," the Forest Products Laboratory, Madison, Wis., finds, is applied by many persons to any decay which is found in wood in a comparatively dry situation. Thus loosely used the term actually includes all decay in wood, since wood kept sufficiently wet can not decay.

In the more limited sense in which pathologists use the term, "dry rot" applies only to the work of a certain house fungus called Merulius lachrymans. This fungus gains its distinction from the fact that it is frequently found growing in timbers without any apparent moisture supply; in reality it does not grow without moisture and is as powerless as any other fungus to infect thoroughly dry wood. Given moist wood in which to germinate, it is able to make its way a surprisingly long distance in dry timbers, drawing the water it needs from the moist wood through a conduit system of slender, minutely-porous strands.

Wood in the typical advanced stage of dry rot is shrunken, yellow to brown in color, and filled with radial and longitudinal shrinkage cracks, roughly forming cubes. In many instances these cracks are filled with a white felty mass, the interwoven strands of the fungus. The decayed wood is so brittle and friable that it can easily be crushed into powder.

The dry rot fungus is active in nearly every region of the United States, in Canada, and in Europe. It is very destructive to factory and house timbers and to logs in storage. Coniferous or soft woods are more commonly infected by it than hardwoods.

What the Woodsman Really Sees

You can always tell a trained woodsman from a tenderfoot, who sees only the obvious things that are plainly evident, but the trained woodsman notices the little things that are unusual or out of the ordinary, says an authority. For example, the tenderfoot walking through the woods will see a lot of trees that look all alike. The skilled woodsman will notice that one tree is bent in a peculiar shape, or has a knob or burl on one side. When he sees that tree again he will recognize it and know he is on the right trail. The tenderfoot will be startled by the sound of two trees rubbing together or of bushes cracking with the wind. The woodsman recognizes these as ordinary sounds, but he hears the faintest of a twig, made by an animal stepping on it. The tenderfoot walking on a trail sees only the path in front of him, which looks all alike. The woodsman will notice the slightest mark in the trail that shows that some animal or person has passed before him, and he will be able to read these marks and tell the tale of what happened.

Blazed Trees Aid to Historians

In earlier days, when large portions of the country were covered with forests and there were few roads, travel was often possible only by way of paths "blazed" through the woods. To blaze, as every woodsman knows, is to strike off a chip from the sides of trees, so that the line of marks shall indicate the direction of the trail.

In blazing for a path small trees were marked, but in blazing for the bounds of a lot or town or for a farm line larger trees were usually selected, the blaze being made about breast high. When, however, as was often the case, the blazing was done in winter on deep snow by men travelling on snowshoes, the mark was necessarily higher up. When such a line is traveled in the summer, especially after some years, during which the trees have grown, the marks are sometimes found high up on the trunks and are likely to escape the eye of the inexperienced. As many of them will also be partially overgrown the task of the surveyor who goes over one of these old lines is not always easy.

If the boundary line passes to the left of a tree selected for blazing the cut is made upon the right side. If the line goes to the left the tree is blazed upon the left side.

In running a boundary line at a corner, where two lines come together, either a "monument" is erected—a stake supported by four boulders—or a tree is blazed on all four sides to indicate as clearly as possible the turning point of the line.

The permanency of the record made by blazing trees is quite remarkable. It is a matter of fact that in many cases of disputed boundaries in many cases of disputed lines or boundaries of lots in forest lands the courts have held the records of the blazes as sufficient and reliable, where carefully drawn plans and formally attested title deeds have been set aside. The wound of a blazed tree heals over, but never so completely that the scar may not be readily recognized by the experienced woodsman, hence it follows that so long as the blazed tree escapes fire and the axe of the lumberman so long it remains a faithful record of the line as surveyed.

Blazed trees also fix dates almost as accurately as they preserve boundaries. The outer shell which has grown over scar is cut away, and the rings in the wood beneath the bark testify to the number of years which have elapsed since the blaze was made.

Standardization of Moulding Patterns

The National Lumber Manufacturers' Association is endeavoring to bring about what appears to be a very desirable accomplishment—the standardization of lumber sizes and moulding patterns. The committee working on the latter, consisting of representatives of the American Institute of Architects, the Wholesale Sash and Door Association, and the National Lumber Manufacturers, Association, prepared a schedule which was submitted to the various interests last spring, and at the annual meeting of the American Lumber Congress, in April, that body went on record as favoring standardization and urging the various interests to give careful consideration to it.

Lumber sizes have varied a great deal in different producing districts, and there is still wide variance. Differences in widths and thicknesses come about, particularly in surfaced lumber, by the different amounts of material taken from the rough lumber by the planers, and by action of associations of lumbermen manufacturing different kinds of woods in establishing individual association standards. There has always been the argument that so long as lumber was thick enough to serve the uses to which it was put, manufacturing it a little thinner than plump thickness for the various sizes effected a saving in freight bills to the buyer, increasing with the distance which it is hauled from the mill to the retail distributor. At various times, however, state legislatures have been asked to consider proposed laws which would compel manufacturers within their borders, and also wholesalers and retailers, to sell "inch" lumber full inch thickness, and other sizes full measure. These laws have always failed of enactment because it could be shown that there was no demand for such action.

With moulding patterns there has not been any such criticism. Desire for uniformity of patterns has come from another source. Buyers of mouldings have found a diversity of patterns manufactured by different mills and factories, and when it has been impossible to obtain supplies from the mill or factory that manufactured stock on hand, it has sometimes been difficult and often impossible to match such stock with the products of other manufacturers. From the point of view of convenience to the retail dealers, it would appear desirable that patterns be standardized. As a matter of fact, there are many standard patterns, though individual mills and factories may not make them all, and may make individual patterns which are not standard, and there is an argument for the latter.

A considerable number, particularly of the larger manufacturers of millwork, make a business of turning out complete interiors of individual design.

Embarks in Wholesale Lumber Line

Mr. Anton Selander recently started business as a lumber wholesaler at 103 St. Francis Xavier Street, Montreal, dealing in Canadian and American hard and soft woods. He is a Swede by birth and learned his business in his native country, his father being president of a number of Swedish companies. Mr. Selander was a Swedish forest engineer prior to coming to Canada. He travelled ex-

Anton Selander, Montreal

tensively in Europe as the representative of Swedish lumber concerns and was also vice-consul for Norway and Sweden at Blythe, England.

His business positions in Canada include the management of the forestry department of the St. Maurice Paper Company and management of the lumber department of the Canadian Car and Foundry Company, Montreal.

New Match Factory for Winnipeg

During the past four months nine new industries have been established in Manitoba, representing over half a million dollars in capital. Other concerns are about to locate in the Province, and still others are looking for factory sites, which apparently are difficult to secure. Of the new enterprises already established seven are in Winnipeg—a cut-glass works, a cone factory, a pulp and paper mill, a film concern, a fruit-juice bottling works, a firm of cap manufacturers, and a suitcase factory. A wall-board factory has been located at Selkirk, Manitoba Province, where wall board will be made from straw, and a similar plant, it is learned, will be erected in Winnipeg.

A new match factory, employing 50 hands and producing matches for the western market, will be in operation by November. On account of the dry climate, Manitoba is said to be specially suited to match manufacturing. There are now but three match works in all Canada, and these are located in the east. A fibre-box company will also locate its plant in Winnipeg this summer, utilizing scrap paper in the manufacture of composition shipping cases, and a local self-locking concrete wall company, owning and operating the Sawyer system of concrete construction, will soon be ready to place its product on the market.

Eastern Town Saved From Destruction

Upper Gagetown, thirty miles below Fredericton on the St. John River and a short distance from Gagetown, the shore town of Queen's County, after being menaced by forest fires during the week end, was declared in messages to the Canadian Press to be out of danger.

A report received stated that the fires were then under control, that a large crew of men were engaged in fighting the flames, and that the fire had covered a strip of land four miles in length and three miles wide. The New Brunswick Companies, Limited, controlled by English capital, own the property damaged by the fire. The fire reached within a short distance of the village before the flames were under control. No buildings were destroyed and the total loss will not be heavy, although the danger was at times great.

Swelling the Ranks of the Hoo-Hoo

The great big drive for membership of the Concatenated Order of Hoo-Hoo will be held from August 9th to 19th, and from reports received by Secretary-Treasurer H. R. Isherwood, St. Louis, Mo., there is going to be one grand, great boom to augment the ranks of this worthy and widely-known organization. Not only will new members be secured, but old ones in arrears will be asked to pay up. Everybody who knows of the Hoo-Hoo and what it stands for, which was fully explained in the last edition of the "Canada Lumberman," will not be lukewarm in coming forward to further the interests of this reputable organization. The big drive has created a lot of interest and takes place, as already announced, from August 9th to 19th. The slogan is "Loyal Hoo-Hoo, it's up to you to do one day's work for Hoo-Hoo."

The annual convention of the organization will be held in St. Louis on September 8th, 9th and 10th, and promises to be the greatest ever. The Statler Hotel has been selected as the headquarters for the sessions and those who can make it possible to attend should send in their reservations now, addressing the Hoo-Hoo office, Arcade Bldg., St. Louis, Mo., direct.

Encourage Building Sleeping Porches

We have never ceased preaching on the great value to a business man of the ability to make and hold friends. The merchant who holds at once the business respect and the personal friendship of the people of his town, is going to be the king bee in his line of business in that town, says the "Gulf Coast Lumberman."

Then take this tip, Mr. Dealer. We know of no way in which you can bring to your side more enduring friendship in your trade, than by selling your townspeople sleeping porches. Prove it for yourself. Go talk to the folks who now have sleeping porches, and discover what they think of them. At this time of the year there is no possession under the sun that is one-half as popular with the average family as their sleeping porch. They sleep in the open air—dreamlessly, coolly, comfortably—and they rise in the morning strengthened and refreshed, to hear their neighbors telling what a hot night it had been.

Every family that owns a sleeping porch, thoroughly appreciates that possession. They are open and frank in their appreciation. Doesn't it stand to reason then, Mr. Dealer, that a real stroke of business genius on your part, is the building of just as many sleeping porches in your town as possible. Why, it has gotten so now in many parts of this country, that the home that is offered for sale that cannot brag about having a "lovely sleeping porch," is immediately at a disadvantage.

It is ten degrees cooler on a sleeping porch on a hot summer night than it is in the coolest bedroom inside the house. Inside the house the mosquitoes may be biting in swarms; outside on the sleeping porch you are untroubled by them. There is health, happiness, satisfaction in sleeping porches. Compared with their value and usefulness, they give you more for your money than almost any other possible investment.

Sell a man who never had a sleeping porch and before the summer is over you have earned his deep gratitude. And you have done wonders for himself and his family.

Get some sleeping porch plans.

Write a sleeping porch letter.

Run a sleeping porch ad.

List your town folks who need sleeping porches.

Use the mail, the newspaper, and your personal solicitation to reach him.

Visualize with your plans.

Don't let a single family in your town go without a sleeping porch simply because you have not made the proper effort to provide him. That is your job. You accepted such duties when you became a building merchant.

Retailers Having Annual Excursion

As the "Canada Lumberman" goes to press between fifty and sixty members of the Ontario Retail Lumber Dealers' Association are enjoying their annual outing to North Bay, Callander, Trout Mills, Cache Bay, Sturgeon Falls and the French River. The trip will occupy four or five days and several points will be visited while the members will partake of out-door shanty lunches, fishing trips, motor and steamer rides, etc. A full report of the jaunt will appear in the next issue of the "Canada Lumberman."

Examinations for forest rangers and scalers were held in Fredericton recently. Seventeen men wrote on the examinations, hoping to qualify for Government rangers. Following the written and oral examinations the men were taken to the Victoria mill, where they were given some tests in scaling.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted

Two Hundred Thousand Feet 4/4 Birch, No. 2 Common and Better. Box 303 Canada Lumberman. 13-16

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Birch Wanted

No. 1 Com. and Btr., 4/4" to 16/4". Name us your best prices delivered here for dry stock. Will contract for mill output in Birch, Elm, Basswood and Ash.

WARREN ROSS LUMBER CO.,
10-t.f. Jamestown, N.Y.

WANTED

White Pine Spruce
ALL GRADES.
Also LATH of all grades

JOHN F. BURKE,
2-t f. Aeolian Bldg., New York City.

White Pine Wanted

One car or more each of:

1 x 10" x 16'
1¼" x 10" x 12 to 16'
2" x 12" x 16'
1¼" x 8" x 12 to 16'
1¼" x 12" x 12 to 16'
1" x 12" x 16'

in best grade you can furnish, which please describe in your offer.

G. ELIAS & BRO. INC.,
15-17 Buffalo, N.Y.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited,
12-t.f. 123 Bay St., Toronto.

Lumber For Sale

FOR SALE: Cull staves for crating purposes, thirty inches long, from four to seven inches wide, one-third of an inch thick. Trenton Cooperage Mills, Ltd., Trenton, Ont. 13-16

Thick Dry Oak For Sale

1 car	3 "	1st and 2nds Red Oak
½ car	2½"	No. 1 Common Red Oak
½ car	3 "	No. 1 Common Red Oak
½ car	2½"	No. 2 Common Red Oak
1 car	2½"	No. 1 Common White Oak
½ car	3 "	No. 1 Common White Oak
1 car	2½"	No. 2 Common White Oak

All Ohio stock one year and older. Can ship immediately at very attractive prices. Address Box 313, Canada Lumberman. 14-15

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Pulpwood For Sale

1920-1921 Delivery

3,000-4,000 cords Spruce and Balsam.
1,000-1,500 cords Poplar.

JAMES THOMAS CLAIR,
11-t.f. Clair, N.B.

For Sale

4,000 cords 4 feet sap peeled pulpwood, Spruce and Balsam, containing about 90 per cent. Spruce, for immediate or next summer delivery, situated at Blue River, Canadian National Railway; 23½ cents to Watertown.

QUEBEC LUMBER CO.,
98 St. Peter St.,
Phone 329 Quebec, Que.
10-15

For Sale

25/30 M. ft. 1 x 8 White Pine, 10/16 ft.
25/30 M. ft. 1 x 10 " " "

Quality, Mill Run, Mill Culls and Clears out.

For prices address—

Standard Export Lumber Co., Ltd.
406 Board of Trade Bldg.,
Montreal, Que.
Phone Main 7761. 15

Dry Merchantable Spruce

600 M. ft. 3 x 8—10/20',
75% 14' and longer.

J. E. Harroun & Son,
14-15 Watertown, N.Y.

For Sale

115,000 ft. White Pine Lumber, classified as follows:—

1"	25,000
1½"	13,000
2"	64,000
3"	13,000

This cut of lumber, being out of large trees, runs very wide, and is well sawn. It was sawn in the months of January and February, stuck-up and covered and should be ready for shipment very soon.

For further particulars apply to J. A. Farnsworth, Cookshire, Que. 15-t.f.

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

For Sale

F.O.B. cars or delivered, 60,000 feet of 3 x 2 No. 1 Fir, has been used for the construction of three buildings same size, for joists. Buildings were erected expecting to be taken down, so materials are in first class condition. For particulars address: Leslie J. Hastings, 27 Wellington Street, Brantford, Ontario. 15

FOR SALE—LATH

10 cars Merch. Spruce Lath, 1½" x 4'
3 cars Hardwood Flooring, No. 1 and 2, also Clear.
About Two Million feet of Spruce, Pine and Hardwood in the new cut.

J. P. ABEL, FORTIN & CO.,
379 Desjardins Ave.
15 Maisonneuve, Montreal, P.Q.

Machinery Wanted

WANTED—Two heavy log or lumber trucks. Box 257, Canada Lumberman, Toronto. 11-t.f.

WANTED—A complete Saw Mill to cut 20 M. per day, with plenty of power. Box 311, Canada Lumberman. 13-

Wanted

Second-hand Portable Saw Mill, 30 to 40 H. P. Must be a good outfit. Apply to Box 336, Canada Lumberman. 15

Machinery For Sale

FOR SALE—One used Waterous Carriage. Apply Bishop Lumber Company, Ltd., Nesterville, Ont. 15-16

For Sale

One NEW KENDALL GANG—can be seen at the Wm. Hamilton Mfg. Co.'s shops at Peterboro. Apply for price to Schroeder Mills & Lumber Co., Pakesley, Ont. 13-16

Circular Slab Resaw For Sale

Strictly First Class Machine carrying 42" inserted tooth saw. Keenan Bros., Limited. Owen Sound, Ont. 9-t.f.

Truck For Sale

Four-ton Acason Truck for sale, run 18 months, good as new, new tires throughout and in best of condition. If interested see this at once. Price $4,040, $2,500 cash, or will take amount in lumber. Terms on balance arranged. Apply

HALL BROS., LTD.,
12-t.f. Toronto, Ont.

For Sale

One Holmes Two Saw Edger
One Woods Self-Feed Rip Saw.
One Mitts & Merrill Hog.
Write to

THE C. BECK MFG. CO., LTD.,
15 Penetanguishene, Ont.

For Sale

Harris Corliss horizontal twin steam engine, 18" x 48" cylinders, side cranks, 18' flywheel, 52" face, including jet condenser. In good condition and can be seen in operation. Apply Box 230, Canada Lumberman, Toronto, Ont. 9-t.f.

For Sale

1 Waterous Big Champion Edger, 6, 20" Saws	$875.00
1 Waterous Steam Log Kicker, with Arms, 10" cylinder	400.00
1 Set Works	150.00
1 Waterous Nigger, 8 and 10 in. cylinders	275.00
2 Friction Drive Brackets, each	150.00

All the above in good condition.

Apply CONGER LUMBER CO.,
15 Parry Sound, Ont.

Saw Mill Machinery For Sale

Sawyer Massey 25-30 H.P. Portable Engine on wheels, 25 ft. stack.
Waterous 3 block Carriage and iron Saw Frame, 50" inserted tooth saw.
3 saw Green edger.
Counter shafting and butting Saw, 24 ft. rolls, belts and all complete, nearly new.
1 Shingle Machine.
14" double drive Grain Grinder.
For further particulars apply

FRED INMAN,
14-15 Milton, Ont.

FOR SALE Immediately Available

We have the following Used Woodworking Machinery, all in first class condition, at the following prices, F.O.B. Cars, Montreal:—

1—No. 303 C.M.C. 10" Four Sided Moulder. Price	$1500.00
1—No. 313 C.M.C. 6" Four Sided Moulder. Price	$400.00
1—"AMERICAN" Heavy Type 4" Four Sided Moulder. Price	$400.00
1—"BERLIN" Heavy Twin Double Planer & Matcher, will plane two 12" boards at one time. Price	$1400.00
1—New C.M.C. No. 110 Planer, Matcher & Moulder. Price	$900.00
1—No. 6 "GREENLEE" Vertical Automatic Cut-Off Saw with Table. Price	$750.00
1—No. 350 "GREENLEE" Universal Boring Machine. Price	$150.00
1—48" "COLUMBIA" Three Drum Sander. Price	$900.00
1—No. 20 "TOWER" One-Man Two-Saw Trimmer; trims from 6 to 20 feet. Price	$375.00
1—"SMITH & PHILLIPS" Sash and Pocket Machine. Price	$250.00
1—No. 3 "GOODSPEED" Variety Lathe. Price	$375.00

Situations Wanted

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

Experienced young lady desires clerical or secretarial position. Accustomed to assuming responsibility. Box 331, Canada Lumberman. 15

Hardwood lumber inspector, 30, with experience in bookkeeping and general office work, employed at present, wishes to change Position in or near Ottawa, Ont., preferred. Box 321, Canada Lumberman. 15

BUSH MANAGER, capable of handling all logging operations, wants position. Have had good experience with pulp and have travelled and estimated timber limits in various localities. Good references. Apply Box 325, Canada Lumberman. 15-16

WANTED—Situation as lumber salesman or inspector. Conversant with National Hardwood and British Columbia rules of inspection. Thoroughly experienced and can give references. Box 315, Canada Lumberman. 14-15

GENERAL SUPERINTENDENT desires position with mill of capacity from 5 to 10 million feet. Can furnish very best of references and live up to them. Understands both French and English. Open for immediate engagement. Box 327, Canada Lumberman. 15

Fully experienced YARD MANAGER, employed at present, wishes to change. Would like a live point, in either Saskatchewan or Alberta, where there is business to get. Can furnish excellent references and take charge on 30 days' notice. Box 278, Canada Lumberman, Toronto. 13-16

LUMBERMAN, Canadian born, now engaged as manager of a Wholesale & Retail Lumber & Builders' Supply Company doing half million a year business in a middle western state, open for a proposition. I have had fifteen years' experience in all branches of the business. If you are looking for a HIGH CLASS EXECUTIVE I can deliver the goods. Box 305, Canada Lumberman. 14-16

Representative or Traveller

Wanted by a young married man having over seventeen years' experience in the lumber business in all its branches, hard or soft wood. At present engaged as head shipper for a large lumber company. Will go anywhere in Canada or the United States.

Business men, if you are looking for a man who knows how to grade lumber and who will understand what he is selling, this is your chance. Give me a trial and I will show results. An interview would be greatly appreciated.

Box 329, Canada Lumberman. 15

Situations Vacant

WANTED Saw Filer and Millwright, must be experienced with Band, Rip and Re-Saws. for small planing mill. The S. Hadley Lumber Company, Chatham, Ont. 15-17

Man wanted to take charge of Sash Department in a city planing mill. Must be competent and be able to run machines as well as lay out sash. Apply Box 132, Canada Lumberman, Toronto. 4-t.f.

WANTED—Young man experienced in woods operation and saw mill, to take care as superintendent. Mill cutting one and one-half to two million feet per year. Apply, stating experience, reference and salary expected, to Box 219, Canada Lumberman, Toronto. 9-t.f.

WANTED—Young man, experienced stenographer wanted by Montreal wholesale lumber firm. Good opportunity for advancement for right man with business ability.

Apply Box 305, Canada Lumberman, 119 Board of Trade, Montreal. 15

Young man of experience in Stenography and Typewriting wanted as Bookkeeper for Wholesale Lumber office in Toronto. Good salary and opportunity for advancement. Give age, experience and references to Box 244, Canada Lumberman, Toronto, Ont. 10-t.f.

Sawmill Engineer

Mechanical Engineer with good experience in constructing up to date sawmill machinery and with experience as sawmill designer wanted for large lumber company in Canada.

State education, experience, age and salary wanted.

Only first class up to date men need apply. Box 314, Canada Lumberman. 14-15

Business Chances

Timber Limit For Sale

in Northern Ontario, with or without full equipment. Includes mill site. Home Realty Company, 102 Bank Street, Ottawa, Ont. 15

Baled Shavings

For sale at attractive prices. Send your enquiry to L. S. Barrand Planing Mills, Pembroke, Ont. 15

Wanted

To Contract with Party who owns good portable mill, or small stationary mill to cut softwood and hardwood logs. To saw year round. Large quantity of timber to cut. For further particulars, apply to Petawawa Lumber Company, Ltd., Pembroke, Ont. 12-t.f.

Saw Mill Wanted

Circular mill, 15,000 feet to 20,000 feet daily capacity, complete with carriage, engine, edger, trimmers, etc. Must be in good condition. Send full particulars and lowest cash price.

MULHOLLAND & CO.,
15-16 23 Jordan St., Toronto.

Saw Mill and Timber Limit For Sale

Saw Mill with a capacity of 35M per day, situated at a good shipping point on the T. & N. O. Railway. 50 million feet of lumber and 100 thousand cords pulpwood available. For further particulars apply to A. J. Bailey, 115 Stair Bldg., Toronto. 12-t.f.

For Sale

$30,000 cash will buy an up-to-date Saw Mill, Planer, Blower, etc., all supplies and lumber on hand at time sale is made, including from 6½ to 7 million feet of finest standing timber in interior of B. C. Can buy 12 to 15,000,000 ft. more adjoining. Capacity of mill 20,000 ft. per day; timber is 85 per cent. Pine, balance Fir. Mill in full operation at present. Must be sold at once to close up partnership. Box 323, Canada Lumberman. 15-17

Standing timber wanted in large or small blocks south of the C. P. R. main line in Parry Sound, Muskoka, Haliburton, Hastings, Lennox, Addington, Nipissing, Frontenac and Renfrew County. Send full particulars, giving lot, concession numbers and name of township, with lowest net cash price.

MULHOLLAND & CO.,
15-18 Toronto, Ont.

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about $4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments.

This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
165 Broadway
5-t.f. New York City.

Miscellaneous

Sawmill Wanted

A single band and band resaw sawmill complete including gang edger, planer and matcher, single surface planer, lath machine, bed saw, trimmers, adequate power plant and electric light plant. All must be in good condition.

This outfit is for use in Canada therefore preference will be given to offerings from there. A good steam feed rotary and band resaw would be considered.

Address with full particulars, Box 310, Canada Lumberman and Woodworker. 14-17

A lumber manufacturer in Northern New Brunswick, responsible for a moderate amount and able to furnish good references, wishes to contract for a few thousand cords of sap-peeled and rossed pulpwood. Advances required. Rail and water shipment. Deliveries could commence this summer. Box 332, Canada Lumberman. 15

NOTICE!

An old established lumber business, including property and plant, in full running order, for sale. This business can be inspected at any time. Full particulars re terms can be had from the owners, who are retiring from the business. Address Messrs. Laird Bros., Dresden, Ont.

The above offers a rare opportunity to one wishing to purchase an old established and profitable business. 15-16

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario and the East

During the past few days there has been an improvement in trade, and while there is no great rush. wholesalers and manufacturers are well satisfied with the volume at this season of the year. Building operations continue active at most points and lumber values, on the whole, are holding, although there is a little weakening in spruce and hemlock. A few isolated cases of price-cutting are reported, but these are where parties are over-stocked or do not deem it desirable to hold on to what they have in hand. On the whole July was very satisfactory to the trade in general, although the volume was, no doubt, cut down by reason of the talk of slump in every other commodity. The recent advance of from $3.00 to $5.00 in western stock is holding good and shingles are now on the ascendency. There are not nearly as many cars in transit as formerly and western values are becoming more stabilized. Word from the west says that the domestic demand there is improving. Further inquiries are coming from overseas points and things are generally on the up-grade. Some of the shingle mills are resuming, but operations in this line are still very much restricted. Although it has been reported that a decrease has taken place in the price of logs, this is not the case.

As the days pass there is a more optimistic feeling in the ranks of the retail lumbermen and others, owing to the excellent crop prospects, both in the east and the west. It is expected that the farmers, who will reap a rich harvest, will do considerable building this fall, and the demand for general lines in repair work will be exceptionally keen. Of all the softwoods white pine is, possibly. the most active in demand and is holding its own.

The car situation is still far from satisfactory and many shipments are handicapped by reason of the shortage of foreign cars and the embargo which prevails at several points. It is announced that the application of the Canadian Railroad Association to the Dominion Railway Commissioners for a 30 per cent. increase in freight rates has been made. This intimation has been expected for some time, and knowing ones feel certain that it may be granted. An increase of 30 per cent. in the freight rates, the levying of the business sales tax, the transportation difficulties and other factors are all going to add to the price of lumber. There is no indication that wages will fall in any line; in fact the tendency is rather in the other direction and, with the higher price of sugar, potatoes, hay and other requisites of camps, logging expenses are going to mount higher than ever. The application for higher freight rates is based upon the increased operating costs, including both labor, charges and the price of materials. It is stated that the increases in such costs greatly exceed the rate increase that was put into effect in August. 1918. During the first twelve months following the inauguration of the higher rates there was an increase in costs amounting to about $80,000,000, while additional revenue derived under the higher tariff basis came to only $43,-000,000.

Among shippers there is little doubt entertained but that the carriers will be granted a substantial increase in rates on account of the decreased purchasing power of the railroads' dollar. The Railway Association is anxious that the increase shall come into effect as speedily as possible in order to give relief.

It is stated that the railways, both in Canada and the United States, will be buying considerable material this fall, which will add considerably to the activity of the hardwood trade, which is rather dull at the present time. There is not much purchasing going on, and manufacturers who operate large industrial plants where great quantities of hardwood are required, are afraid to launch out an expansive scale owing to the threatened shortage of coal. In fact some of the industries are running dangerously near the zero line in this respect. One wholesaler reported that he had a few cars cancelled during the past week, which is the first countermanding of an order that had taken place in many months. Large consumers are buying only in carload lots, as required from time to time, instead of big blocks, as characterized the situation at the commencement of the year. Prices are a little easier in some lines, but on the whole. are keeping up very well. Manufacturers are more anxious to dispose of stocks now than they were some months ago, and are looking around to see where they can sell their 1920 cuts.

Writing to a Toronto representative of B. C. products, a western manufacturer says that there has been a material stiffening in prices during the past few days. The advance in railway freight rates which will undoubtedly take place in the near future,, the exceedingly good crop prospects throughout Canada and the United States, and the low stocks of lumber in the hands of the retail dealers, together with the outlook of a car shortage, will be responsible for a large awakening in lumber demands and, consequently a betterment in prices. There has been and still continues to be, a really terrific curtailment in production, particulraly in the states of Oregon and Washington, where the mills are located away from tide-water. Unless all guesses go astray, lumber prices will go ihgher before they will go lower. The great difficulty will be in getting cars to make shipments. There has lately been a considerable jump in shingles and the trend of quotations is steadily upwards.

United States

There is some improvement in the general market situation and the tone of business has been better during the past few days than it has for several weeks. Retail yards have been buying a little more freely owing to their stock running low, and the demand for southern pine was recently in excess of production. There is an optimistic feeling in various circles owing to the promising crop. It is felt that the continued prosperity of the agricultural communities will add not a little strength to the lumber market, and there is likely to be considerable building campaign this fall of farm buildings and a large volume of repair work.

The car shortage is still very acute and promises to be the worst this autumn of any time in the history of American transportation. It is pointed out that retail lumbermen and factory consumers, who may want lumber in the near future, would show the part of wisdom if they did everything possible to place their orders and have their stock forwarded at once. It is stated that in the two principal softwoods, yellow pine and Douglas fir, the market during the past two weeks has taken up all the desirable offerings. One outstanding feature of the situation is that hardwoods are inclined to be quiet and manufacturers are following a waiting policy, and for the most part refusing to reduce prices. A few woods have decreased in value but others have gone up slightly so that when everything is taken into consideration, the declines about balance the advances.

Hemlock operators have generally refused to accept reductions to put their product in competition with other softwoods and though some sales have been made at concessions, the price level has been quite stable. Depleted stocks and limited production have contributed in holding the market in face of reduced demand. During the last week there has been a little more activity and the volume of business in hemlock has increased.

The volume of southern pine has increased and prices have firmed up. There may be some lack of uniformity in quotations but this is to be expected at the turn of the market.

Embargoes and the car shortage are also playing their part in making buyers willing to pay prices asked, provided the stock can be go through to destination. Production shows little change in volume, and until cars are available in more adequate supply, undoubtedly many manufacturers will hold down production considerably. The railroads are purchasing southern pine in increasing volume, the stock being used principally for repairs. Never before in the history of American railroads have there been so many cars in service not suited for grain carrying. One road alone recently reported that out of 10,000 box cars owned by it, and on its own lines, only 3,000 were suitable for carrying grain. This illustrates graphically why much lumber is required for repairs and must be had at once.

In an above review of the general situation "Lumber" presents the following:

In viewing the stiffening tendency that has undoubtedly developed in the chief structural woods within the last two weeks, a certain amount of conservation is recommended to all branches of the trade. The reasons for renewed buying on the part of retailers may be briefly summed. Stocks in retail yards are somewhat run down, cars are scarce and getting scarcer and freight rates are booked for an advance.

The factors that should be borne in mind, even by the most optimistically inclined, are:

(1) The virtual suspension of building due to:
(a) tight money;
(b) high labor costs;
(c) cement and brick shortage;
(d) Slow deliveries of all materials due to car shortage.
(2) Financial difficulties. Most yards that have not substan-

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

tially increased their liquid capital are finding it difficult to finance even their minimum stock requirements.

Until some, or all, of these factors are removed or modified, it is not to be expected that there will be very radical advances in the lumber market. The dealer cannot continue buying on a heavy scale if lumber is going out of his yard in limited quantities.

The buying movement that has gained momentum within the last two or three weeks is well-considered and is consistent. Lumber does not consider it in the nature of a "flash" movement, but anticipates a slow but steady gain in prices in the lower grades. Some further declines in upper grades would not be surprising, as differentials are still much wider than the old proportions between grades.

There is little to indicate a "runaway" market. Apparently it could occur only as a result of extreme car shortage, putting at a premium what few shipments could come through from the mills. A very substantial recovery in building operations might have the same effect, but is so unlikely within the near future as to be negligible. The outlook for the country yards is really better than for those located in the industrial centres. Crop prospects are excellent, much of the buying coming from small yards and from line yards that are rightly anticipating a good farm trade.

Great Britain

A very considerable import of New Brunswick and Nova Scotia spruce deals met with a restricted demand. Values were easier, according to the latest report issued by Alfred Dobell & Co. Douglas fir imports were heavy and the demand quiet. Values remained steady. Scandinavian deals and boards imports exceeded the demand, and stocks were consequently increased, while f.o.b. values remained firm.

The is very little change in the pitch pine situation since the last report. The total stock at Liverpool and Manchester of lumber and timber now amounts to 2,137,000 cubic feet. of which over half consists of lumber. There was a very quiet demand and prices were easier. With regard to States hardwoods, consignment parcels of first quality wagon oak planks of good specification, principally 5 in. by 12 in. 16 ft., are realizing fair prices, but with the exception of this item the general demand is stagnant, buyers being reluctant to commit themselves for forward delivery or to make offers for consignment parcels now arriving.

There is no improvement to report in East Inda teak, and stocks being ample, buyers are disinclined to make further purchases.

From all quarters there comes the report of dull markets, with little or no enquiry for f.ob. goods. The year progresses rapidly, says the "Timber News." In a few days we shall have reached the middle of the shipping season, with roughly three months remaining to get goods shipped away, and what has been bought for next winter's stock ? Practically nothing.

Importers have seldom been faced with such a problem. as the one now before them, of deciding whether to buy or what to buy this autumn. It is a problem bristling with difficulties. Prices are phenomenally high. Will they come back at all before the close of the season ? Are freights likely to be very much lower this autumn? Will there be a recurrence of the congestion troubles of a year ago? Will the present financial stringency become more acute? When all these factors are considered, other things may not be overlooked, such as the desirability of undertaking heavy commitments in view ed for expected calls.

Word from Liverpool conveys the information that last month some 4,250 stds. spruce arrived, of which 2,820 stds. went into consumption. Stocks have again been added to, and now reach, including New Brunswick, Nova Scotia and Quebec spruce, about 23,000 stds. Unfortunately, trade in this wood so far has proved rather disappointing owing to the heavy stocks in Britain imported during the war, which only a few months back were placed on the market. The situation may be expetced to right itself soon if fresh shipments are not overdone, but at present the market, although improving, is on the heavy side.

About 1,330 stds. Canadian yellow pine came forward last month. 680 stds. were delivered, and a moderate stock of 2,210 stds. held. The demand for pine is improving, and later shipments will be needed for expected demands.

The London softwood market is passing through a decidedly quiet "patch," unenlivened by any incident calling for comment, unless it be a rumor of a few cheap freight fixtures.

Unquestionably. this condition of affairs is attributable to outside causes, chief among them being the discontent at the continuance of the 60 per cent. "excess profit duty." There is a marked listlessness observable with timbermen, and in conversation one gathers that there is a determination not to operate on a large scale, but rather to do a minimum of business, sufficient to allow of profits being made to cover expenses. But beyond that, why bother?

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Halifax Reports Trade Quiet with Good Outlook

During the past month the movement of lumber from the mills of this province to the various markets has been less brisk than during the earlier part of the year. Rail shipments are being made to the United States, the volume depending on the limited supply of American cars. It has been reported on several occasions that the American railroads were arranging for a supply of cars to relieve the situation, but there is as yet no indication that any action has been taken with this end in view. These shipments are largely on account of existing contracts, and in the meantime American firms show little inclination to transact new business.

The outlook for a fair volume of trade at satisfactory prices, a little later in the season, seems quite promising. Most shippers believe that when business picks up across the line after the summer holidays are over. importers there will find stocks seriously reduced, and their efforts to put themselves in a position to supply their customers' demands will be reflected in higher prices for Canadian goods, and a much more satisfactory condition of trade in general.

If this demand develops to the extent anticipated it may also be found that the quantity of lumber suitable for the American market left unsold will fall short of what will be required.

Shipments for the first six months of the year have been very heavy, most of the mills, with the exception of some of the larger stationary plants, have finished sawing, and the amount of lumber remaining to be marketed at this time of year is very much below normal.

Many reasons familiar to the trade have been advanced by British importers from time to time to account for the unsatisfactory condition of their market for spruce deals.

Business has not yet revived, subject to the period of industrial unrest in England, to the extent anticipated. To make matters worse, since the opening of navigation, many cargoes have been shipped from Nova Scotia, and also New Brunswick, and offered on a market that was not prepared to absorb them. Owing to the action of the British Government, who, at the beginning of the year held large stocks in store both here and in England, and who still exercised their control over shipping. in offering their holdings below the c.i.f. prices asked for new stocks, it became apparent that private shippers were up against very unfair competition. As a result the export of deals from Nova Scotia has been steadily dwindling ,and freight rates now show a downward tendency. It is expected that freights will reach a level where c.i.f. prices will make the deal trade attractive.

Local yards have lately been increasing their stocks, and the demand for native lumber is quieted. Building is still active though seriously retarded by the difficulty in obtaining sufficient supplies of other materials. Laths are firm with an upward tendency.

Business Slack in Montreal with Prices Steady

Trade conditions in Montreal are characterized by quietness. A part of this can be ascribed to the usual quietness in the summer. and a part to general conditions. Prices, however, continue to hold very firm, with no indications of any break. In view of the reports of a smaller cut than was anticipated, particularly in the Ottawa Valley, there is every reason to anticipate a further rise rather than a decline. The holding up of logs, due to poor water conditions, is stated to be important in some of the Quebec districts.

Locally, business is quiet. This seems paradoxical when viewed in the light of the large number of building permits. It is, however, one thing to take out a permit and another to proceed with the work. The shortage in supplies of building material is retarding work. Some of the firms making this material are either working on part time or are closed down, because of inability to secure stocks of coal.

Orders from across the line are slightly better, but business by

no stretch of imagination can be called good. The representative of a large firm who has just returned from a business trip to the Eastern States, said that the stocks bought earlier in the year are now coming in, and that until these are sold, business will be slack. The building permits there have dropped off.

B. C. stocks are in fair demand, with prices maintained.

Only small shipments are being made to the United Kingdom. The shipping companies still stick to their quotation of 300s. per standard, while tramps are offering freight at from 180s. to 200s. per standard. The position thus created is that goods are being sent at different freight rates, and it is obvious that those who can obtain space on tramps have a distinct advantage over those who ship by liners.

St. John Has No Surplus of Sawn Stock Unsold

Late advices indicate that there is very little change, if any, in the lumber market at St. John. The manufacturers, as a whole, have every confidence in the market and believe that the present quietness and slight reduction in prices is only temporary. This is the impression that all the producers hold. There, certainly, is no great surplus of sawn stocks for sale at St. John, it practically all being in the hands of brokers, who are well able to hold and who feel they will be repaid by so doing as stocks are not over produced and the sawing season is now about half over. With the figure for oats and other supplies steadily going higher, it looks to all as if logs would cost much more than they did during 1919-20. If the banks of the country do not advance credit to manufacturers, a great curtailment in the cut of sawn logs will take place.

Prices in the American market have evidently reached the bottom and certainly seem steadier at the present than they were two weeks ago. Very little shading of quotations is taking place. If any bargains are going, they are quickly taken up, and as a rule it is not done to any extent. This goes to show that there is no great surplus of material offering or else there would be considerable reduction in prices. Laths and shingles are weak in the American market but are yet at a fair price, netting about $6.00 for laths at St. John —with shingles about $7.50 for Extras, Clears $7.00, 2nd Clears $4.75. Very few shingles are going into the American market from St. John, as they are selling locally at Extras $8.50, Clears $7.75, 2nd Clears $6.50, Ex. No. 1 $5.50.

Stocks of English deal are heavy at St. John as largely all 6 inch and under in narrow sizes were turned into the American market, leaving 7 x 3 and up for English business. The condition of the English market shows some improvement and by fall, no doubt, prices will show considerable strength. Freights are much lower, offers having been turned down by the shippers of 160 shillings on deals, for across. Should freights reduce, prices will become steadier and sales can be made on Great Britain at a figure which will leave the manufacturer still a profit.

But little tonnage has been chartered from St. John and shipments are light, partly on account of so much narrow stock, many outposts producing better average widths. Sales of deals have left shippers from $38.00 to $40.00 per M. at shipping point.

Demand at Ottawa Falls Off—Values Firm

Uncertainty as to some of the fundamental conditions governing the market featured the Ottawa lumber market during the closing period of July, when a variety of unexpected circumstances cropped up, and other matters, especially the supply of cement for building and the uncertainty as to higher freight rates, called for attention.

The demand for stocks both from the United States and Canada dropped away. Dry stocks became a little scarcer, and some wet lumber came into the market. Some of it was shipped to preferred customers in the Old Country. The woodworking plants resumed operations, but the factory heads were not at all optimistic as to their continuance, as they remained absolutely firm in their previously announced intention that they would not accept the award of the Board of Conciliation, inquiring into the merits of the dispute between their employees and themselves, not recognize the board.

Taken all around the last two or three weeks has seen a marked change in the Ottawa lumber market, and conditions as to the future, while not exactly doubtful as to price and supply, will bear very close watching for several weeks to come.

One of the cheery spots of the market was the report from a well-informed source that a reduction in the ocean freight rate, which is now three hundred shillings per M. feet, might be looked for within the next two weeks or a month.

Though not the best kind of conditions prevailed and obstacles seemed in the way as to the future, prices did not drop, but remained absolutely firm in all grades, with the majority of the manufacturers not quoting prices for this year's sawmill cut.

Taken pro and con the month of July, 1920, and the closing period of June will be one that will be remembered for some considerable time by the Ottawa lumbering trade and especially the woodworking plants. First of all came a log shortage at the sawmills, due to low water, which foreshadowed a reduction of the sawmill season. Next came the strike of the members of the Inside Woodworkers and Factory Workers, which resulted in about fourteen plants ceasing operations and closing down.

The labor forces went to the City Council and at the request of the City of Ottawa the Department of Labor granted a board of conciliation, to which the manufacturers did not agree to be represented upon. The Department did not, apparently, take stock in the protest of the manufacturers and went ahead and named Mr. Stewart McClenaghan, a departmental store manager, to represent the employers on the Board. The Board got down to business quickly and for the best part of a week occupied the attention of the heads of the principal woodworking plants in court.

The manufacturers did not entirely appear of their own accord, but at the request of Judge Gunn, chairman of the Board, who, during the first session of the body, at which the plants were not represented, stated that if they did not care to furnish the information desired that their entire mill and office staff would be subpeoned to supply such information. During the course of the arbitration proceedings, a shortage of cement sprang up, which resulted in building operations being considerably curtailed, with little prospect of improvement until the supply of coal to Canadian cement plants was assured from the United States. Then, in order to add fuel to an already good fire for forethought and study, came the announcement from Chicago on July 20th of increases being granted railway employees by the United States Labor Board. Locally or in Canada it was taken that the increase granted by the Board would amount to about twenty-one per cent., which set lumber shippers thinking as to how the increase would work out on the cost of their lumber shipments. On the cement and railway situations the trade seemed to be as clear as mud as to how they would ultimately work out.

The best indications the Canada Lumberman could get were that rail freight rates were going to go higher and there was going to be a still greater shortage of cement. In connetcion with the cement situation it was mentioned by some of the trade that steps might be taken to prevent its export, but inquiry in governmental circles indicated that this could not be done, as there was no authority to place any such restrictions on the product of the cement manufacturers.

Some of the local builders pointed out that Canadian cement firms were shipping their product into the United States so as they could profit by the favorable exchange rate. The majority of the cement companies in Canada are dependent on coal as a fuel supply, and owing to the recent shortage of this commodity, their production was considerably cut down.

The first intimation as to the new manufacturers' prices were given during the period, as some wholesalers announced that sales had been made at a general advance of from ten to fifteen per cent. as was previously forecasted. Lumber that last year sold at $55 per M. went to sixty dollars and, in some cases, a little more, and so it was reported the increase took effect all along the line. Several of the larger plants, however, have not yet named their figures for this year's sawmill cut, and it is possible that when they go into the market to sell that their rates will be higher than the present advances indicate.

Generally reports as to water conditions in the Ottawa Valley showed considerable improvement. In some cases a raise of from seven to eight inches was reported along the Ottawa river. On the other hand there were reports that several of the bigger companies, including Gillies Bros., McLachin Bros., and W. C. Edwards had had to abandon some of their drives on account of low water.

The car situation showed some improvement as to the number of cars received, but all of them were not box cars. In several instances lumber shippers had to put up with flat cars. The improvement in the car situation aided some of the bigger companies considerably as they were able to forward stocks on order which had been purchased some time ago, and so clear out part of their yards to permit the piling of new stocks.

The demand from the American market, while not up to what it was during June, showed a tendency to strengthen white pine prices. It was felt by some of the lumber brokers that the low peak of prices in the northern United States had been reached and passed as the shipments of pine stocks from North Carolina and the southern States were becoming fewer. Thus it was believed that if the demand picked up during the fall months that the Canadian stocks would command higher prices at the northern American yards.

Conditions as to European export were reported to be "not as bright as expected," largely on account of the high ocean rates. The majority of stocks which were being held on order went ahead and old orders were almost cleaned up, but there was considerable hesi-

tation about making new contracts. One of the principal European export offices at Ottawa reported that there was nothing to justify the rate of 300 shillings per standard and referred to the remarks of the president of the Cunard Line, who intimated to shareholders of the line that they could prepare themselves to look forward for lower rates and dividends.

Sash and door, and lath and shingles continued in fair demand with prices showing little or no change as compared with the last quotations.

Conditions in Quebec Show No Change

The timber and lumber business in the St. Lawrence shows no improvement over the conditions that prevailed in the month of June and the first three weeks of July. The timber interests do not look forward for any appreciable change in the near future. Activities at the port of Quebec these days show slow movement. All shipments taking place are going forward in parcels in steamship liners. There are at present several vessels touching at the port of Quebec, one the steamer "Orthia," booked for Greenock, which is taking on board a full cargo of timber and deals for the various local exporters, the steamer "Ocean Monarch" to sail for London, is loading with small parcels shipped by the different interests, and the steamer "Lowlands," also scheduled to sail for London, is here from Montreal to complete cargo.

The American and British markets at the present are very quiet. Up to the present there has been no sign of a reaction in freight rates, 300 shillings per standard for deals and 450 shillings a standard for timber. Tramp tonnage is now offering to carry freight as low as 200 shillings per stand of deals, full cargo. There is the usual stock of lumber in the yards at the mills in the Province of Quebec, but the demand is not equal to the supply.

There is a very large quantity of rossed and peeled pulpwood in the environments of Quebec and outlying districts, along the line of the Transcontinental Railway, the Intercolonial and the Grand Trunk and Lake St. John Railways of the Canadian National Railways Systems, as well as the Quebec Central Railway waiting purchase and shipment to the pulp and paper mills. The movement of this wood to the United States market is slow on account of the shortage of railway freight cars, and the Canadian-owned railways prohibition in regard to Canadian cars crossing over to the United States, and there held for an indefinite period. Speaking of this situation to Quebec pulp shippers, they say they do not blame the Canadian railways for it is to their knowldege that, when pulpwood is shipped to and arrives at the United States paper mills, convert the cars to their own use, fill them up with paper and forward same to their customers in every section of the country.

The Quebec correspondent of the "Canada Lumberman" was informed by a Quebec exporter of pulpwood that American railway cars that be procured from United States Railways provided the Canadian shippers or their consignees were prepared to submit to talk of graft. He said he was recently told in Montreal that a certain man in that city representing an American Railway superintendent, was prepared to secure a supply of American cars to move Canadian freight for a gratuity of $5 per car, and that this graft was shared by the Montreal man and the American railway superintendent. The story is worth investigation, but no doubt if one was started the Quebec dealer would give out the information in his possession that would lead to exposure.

The Quebec paper and pulp mills are well equipped with pulpwood at the present. The continuous rain and swollen rivers have been a great assistance in driving the cut from the limits to the mills. The Donnacona Pulp and Paper Mills, situated thirty miles from the city of Quebec, in the county of Portneuf, and on the line of the Canadian Northern Railway, are particularly fortunate in this respect. The company have been very successful with their supply of wood this year and now have from eighty to ninety thousand cords at their mills. The Jacques Cartier River was crowded with logs reecntly, being driven down to these mills, due to the recent heavy falls of rain, which have proved to be a veritable bonanza to the Donnacona interests.

A number of rumors are heard these days in Quebec in regard to the building of new paper mills and activities of the Lord Northcliffe agents in offering to purchase limits in the province, but until the information communicated to your correspondent is authenticated it is preferable to treat the same as mere rumors. This, however, is vouched for a certainty and that is the Laurentide Pulp & Paper Co. of Grand Mere, are negotiating for property in the vicinity of Cap Rouge, ten miles from Quebec, by the River St. Lawrence, where they propose building a pulp mill. The Grand Mere mills are operated by the company's own waterpower, and it is said that they have a surplus of 40,000 horse power, which they could dispose of, and propose to wire the necessary power required to Cap Rouge to operate the new mill that is said will be erected in that vicinity. This mill would manufacture from the logs that are secured in the lower St. Lawrence and brought up to Cap Rouge in barges, etc.

Two enterprising young men of Quebec, John Grogan, son of Mr. Stephen Grogan, well known to the trade, and Mark Kaine, son of Hon. J. C. Kaine, have suddenly made their appearance in the lumber business arena. They recently acquired a large interest in a mill at Campbellton, N. B., and now have started to build a mill at Chateau Richer for the manufacture of hardwood lumber and make pulpwood. Another young man of Quebec, who entered into the lumber business some two years ago, Mr. John Irving, has built and is operating a small mill at Gaspe, and is ambitions to do bigger things.

The movement of pulpwood in barges from Quebec to the United States, this summer, has not been at all brisk. One Quebec shipper, who has an order for 6,000 cords of wood, has, up to the present, only been able to secure and ship from Quebec to Mechanicsville, N. Y., 1500 cords, price paid per cord, $15 and freight, including the loading at this end and unloading at the other, $5.50 per cord, making a cost of $20.50 to the American purchaser. Quebec shippers have informed your correspondent that it is difficult to produce and supply the American mills' demand for wood. In the meantime the price of logs per cord is soaring higher.

Two new mills are about to be erected in the Saguenay County for the making of pulpwood, one at Port aux Trembles. and the other at Sheldrake. In the meantime heavy shipments of pulpwood are being carried in United States shipping by steam barges from the Gulf of St. Lawrence ports and Chatham and Dalhousie, N. S., by the Gut of Canso to Portland, Me., for the mills in that state.

Newsy Briefs from Busy East

Another forest fire broke out in the New Brunswick woods on July 18, near Upper Gagetown, in the lower Hersey district, and burned within three-quarters of a mile of the village. The blaze spread with alarming rapidity and by evening had reached huge proportions. The fire spread in two directions, towards Pond Lake and King's Bridge and down the river towards Gagetown. The land burned over was timber land belonging to E. C. Atkinson Lumber Company and A. R. Slipp, of Fredericton. Dame fortune joined forces with the villagers and, while their gallant fight was keeping the blaze from reaching any of their buildings, rain began to fall and soon extinguished the fire. The fire had covered a strip of land four miles in length and three miles wide, a total of twelve square miles. Much of the property was owned by the New Brunswick Companies Ltd. The toal loss is said to be light in comparison to some of the recent conflagrations.

A public sale of no mark and mixed logs was held in St. John, on July 14, in the Board of Trade rooms. Several thousand feet of logs were sold to various lumber firms. Spruce logs were sold to the Stanley Douglas Lumber Company Ltd. at an average price of $17 per thousand; while Murray & Gregory purchased the cedar at $15 per thousand, net scale; hemlock at $15 net scale, and spiked logs at $12 net scale.

Prosecutions in connection with the forest fire which recently destroyed St. Quentin, N.B., will begin. Forty-one summons have been issued and the cases will be tried in Kedgewick and St. Quentin before Magistrate Matheson, of Campbellton.

An Attractive Special Number

The "Timber Trades Journal" of London, England, recently issued a special edition of 312 pages, which is admirably illustrated and contains a wealth of information regarding the present status of the industry in the Old Land, industrial conditions, prospects, production, etc. The Special is illustrated with many photographs of representatives timber merchants, importing and export firms, manufacturers, etc.. and the history of a number of them is presented in bright, readable style. There are also extended references to the great British shipping ports, their history, facilities and development. Among the most interesting articles are: "Will There be a Shortage of Timber?" "Costing in Sawmills and Woodworking Factories," "An International Review of the Plywood Market," "South Wales Pitwood Trade During 1920," "The Home Timber Trade," "Foreign Trade Reports," and a brief review of conditions in practically every wood-growing country. The entire number contains a storehouse of facts which makes it an invaluable work of reference.

EDGINGS

Ontario

The Windsor Lumber Co., Windsor, Ont., have completed their new offices which are very commodious and attractive.

Kaministiquia Pulp & Paper Co., with a capitalization of $1,000,000, will erect a big ground wood pulp plant at Port Arthur.

The new sawmill which was erected at Penetanguishene by the McGibbon Lumber Co. to replace the one which was destroyed by fire, started operations recently.

The Ontario Paper Co. of Thorold are adding another paper machine, which is being installed on the new west side concrete addition. A new office building has recently been erected by the firm.

The Slade Manufacturing Company, Limited, Owen Sound, Ont., were recently incorporated as saw millers, pulp and paper manufacturers. Capital $200,000.

S. L. Lambert, lumberman, is erecting a large new theatre in Welland, Ont. It will have a frontage of 57 feet, a depth of 229 feet and will be four storeys high. The structure will cost in the neighborhood of $200,000, and will have a seating capacity of 1600. The theatre has been leased for a number of years by the Griffin Amusement Corporation.

A charter has been granted to the Century Bag Holder Co, Limited, with a capital stock of $40,000 and headquarters in Toronto, to manufacture, sell and deal in bag holders, bags, boxes, chests, wrappers, packing devices made of wood, paper, fibre, metal and other materials. Walter F. Wormley, Thomas H. Goldring and others of Toronto, are shareholders in the new enterprise.

The Ontario Government has thrown open the Gillies timber and pulpwood limit for mining prospecting. It has been known for some time that this matter has been under consideration, and as the Gillies limit is close to the great silver mines at Cobalt, much interest has been aroused in the announcement. Its opening is expected to result in much added exploration work.

A. E. Guidal, Limited, has been granted a charter with a capital stock of $100,000 and headquarters in Toronto. The company is empowered to manufacture and deal in all kinds of furniture, pictures, picture frames, mouldings, etc., and to carry on the business of cabinet makers, woodworkers and woodcarvers and to deal in lumber of every description and manufactured woodwork of all kinds.

The Riordon Co., Limited, has been incorporated with a capital stock of $80,000,000. The company has acquired valuable pulp and paper, also timber and mining rights, in the Ottawa Valley, and big developments are expected. One of the clauses in its charter gives the promoters power to own, operate, maintain and lease residences, boating houses, hotels, schools, theatres and places of instruction and recreation.

It is announced that Fort William is to have a new pulp plant which will be erected by the Fort William Pulp & Paper Co., and that the site will be on the Mission property at the foot of the Mission River. The plant will cost $3,000,000 and work will soon be started. This makes the third pulp mill definitely announced for the Fort William-Port Arthur district in the last few weeks, Fort William, Port Arthur and Nipigon each getting one. John G. Sutherland of Dayton, Ohio, will be president of the Fort William Pulp & Paper Co.

J. J. Carrick, ex M.P., of Port Arthur, who owns the Black Sturgeon & Pic River concessions, which were put on the market for the Ontario Government a few years ago and is behind the Great Lakes Pulp & Paper Co., has applied to the Ontario Government for a fiat against the Hydro-Electric Power Commission of Ontario. Mr Carrick desires to bring action to compel the Commission to fulfil the conditions of an alleged bargain that he claims was made regarding the purchase of the Campbellford Pulp mill and the Brutin limits in central Ontario. Mr. Carrick alleges that the Commission did not live up to the conditions.

Judgment was recently rendered at Hamilton in the mechanics' lien action by the Beaver Lumber Company against A. B. MacKay, Thomas Crompton and Robert Melick, finding that MacKay is liable for 20 per cent of $1,066.66, and that Crompton is also liable. Melick, the court found, agreed with MacKay to build two cottages in the Kenilworth survey to be paid for one-third when plastered and the balance when complete. Compton to act as arbitrator in case of any dispute. The goods supplied by the Beaver company were under order of Crompton and Melick and used in the houses in question. MacKay was therefore responsible.

Eastern Canada

A. Lemieux, of Thetford Mines, Que., is rebuilding his saw mill which was recenly destroyed by fire.

The Pearl Lake Mill Co., of which A. M. Gates is manager, is rebuilding its sawmill at Kemptville, N. S

L. O. Grothe, 556 St. Lawrence Blvd, Montreal, intends re-erecting his cigar box factory which was destroyed by fire.

The Brown Corporation of La Tuque, will shortly erect at St. Angele de Laval, Que., where they have purchased forty-six acres for a warehouse for the storing of pulp.

Fletcher Corporation, Limited, Sherbrooke, Que., have been incorporated to manufacture and generally deal in lumber and timber and other forest products. Capital $100,000. Among the incorporators are H. B. Fletcher, lumberman, and F. S. Rugg, K.C., both of Sherbrooke, Que.

It is understood that Price Bros., Limited, have effected a large newsprint paper contract with the Daily Express, of London, England, at favorable terms. In this connection it is pointed out that the newspaper which

is one controlled by Lord Beaverbrook, has been anxious for its newsprint supply for some time past and the contract is satisfactory to them, while it is also in line with Price Bros.' policy of enlarging its overseas market.

The saw mill and lumber plant of the J. P. Abel, Fortin and Company, Ltd., 383 Desjardins street, Maisonneuve, box maker, etc, has been destroyed by fire. The plant with the exception of the office, was razed to the ground.

Riordon Company, Limited, Montreal, Que., were recently granted a federal charter to conduct a general lumber business, manufacturing and dealing in timber, pulp and other forest products and by-products. Capital $80,000,000.

It is understood that an important pulp concern is about to be erected between St. Romuald and New Liverpool, at Levis. This company will begin doing business with a capital of $5,000,000, under the leadership of Mr. John Breakey, a prominent lumber merchant from Breakeyville, Levis

The Board of Trade Journal for July, discussing Canadian ports, shows that St. John is second only to Montreal in exports and imports. The total exports for the season was $813,859,636, with imports $94,340,531. St. John's record is more than twice that of Halifax, whose total business is placed at $326,396,780.

Hon. Mr. Currie recently spoke to the employees of the Continental Lumber Co., Charlo, N. B., and the men on the Charlo River drive on behalf of the St. Quentin fire sufferers and the handsome sum of $183.50 was contributed. This was sent to Rev. Fr. Martin of St. Quentin and was gratefully acknowledged.

Approximately $100,000 damage was done to rolling stock and freight on the Canadian Pacific Railway at Webster's Crossing, two miles east of Lennoxville, recently, when a special double-header freight train, consisting principally of lumber and pulp, bound from Megantic to Sherbrooke, left the rails. The crews of both locomotives escaped with slight injuries.

The new machine, which Howard Smith Paper Mills Co., Montreal, are installing at their Crabtree Mill Division in the province of Quebec, will trim 82 in. This will increase the production of that division by 15 tons per day of sulphite bond papers, most of which will be for the export market. In regard to the sulphite department of the Cornwall division, the capacity of it is being increased to 60 tons per day, but it is not expected that it will be in operation until October.

After an investigation for several weeks by Laurentide Company's accountants into the books of several Grand'Mere, P.Q. grocers, so that a committee could determine whether it seemed practicable for the company to start a company store, the committee have reported that they were unable to recommend that the company should undertake this task. A petition signed by about 500 employees of the mill, asking the company to embark in the grocery business so that food stuffs could be purchased at lower prices, formed the basis of the investigation.

Fred. Magee, Limited, Port Elgin, N.B., packers and exporters, are erecting a box and shook mill. The new factory will be 36 x 84, two storeys, and will be equipped with the usual box-making machinery including cut-off saws, resaws, double and single planers, matchers, nailing machines, etc. Some of this equipment was purchased from Cowan & Co. of Galt, Limited, Galt, Ont. The capacity of the new plant is such that it will not only be able to take care of the requirements of the above-mentioned firm but will cater to the outside demand. Manufacturing operations are expected to commence about October 1st.

Western Canada

The Lumber Products Company at Queensborough has awarded a contract to the Dominion Construction Company, Vancouver, for re-building the boiler house and fuel bin recently destroyed by fire.

Edward Erickson, employed at the Elk Valley Lumber Company's saw mill near Fernie, B. C., died recently from injuries received earlier in the day, when he was thrown into contact with a circular saw. Both legs and one arm were practically severed from his body.

Ptarimigan Lumber Company, Limited, Ptarimigan, B. C., was recently incorporated to manufacture and deal in lumber, timber and other forest products. Capital $250,000. Two of the incorporators are C. Gaskill of Prince George, B. C., and A. S. Matheson, barrister, of Edmonton, Alta.

Recent incorporations in British Columbia include Brunette Sawmills, Limited, Vancouver, capital $2,000,000, Grousted Lumber Co., Limited, Vancouver, $350,000, Diamond Lath Mills, Limited, Port Hammond, $10,000. Malabat Tie & Lumber Co., Limited, $25,000. Lovering Lumber Co., Limited, has taken out an extra provincial license with a capital of $100,000, and the British Columbia office will be at Wasa and the eastern office in Toronto.

The Boards of Trade throughout Alberta have strongly urged the Dominion government to open the forest reserves for oil prospecting and development. A memorial sent by the Edmonton board says: "The crisis demands that no opportunity of developing an oil supply in Canada be neglected. The forest reserves in the prairie provinces should be opened to prospecting and development for oil and other minerals subject to proper measures to safeguard the reserves from fire and the destruction of timber from other causes. In order to encourage development, the government should fix a minimum royalty on oil."

In the church yard of the village of Santa Maria del Tule, in Southern Mexico, stands a cypress tree which is estimated to be between 5,000 and 6,000 years old, and probably the oldest living thing in the world. It was first discovered by Humboldt, 100 years ago, who nailed a wooden tablet to the trunk.

The need for international co-operation between Canada and the United States in regard to the shortage of print paper will be discussed at a New England forestry conference to be held at Colby Academy in New London. Conn., Aug. 24 to 26.

Getting Out After the Farm Trade

Retail Lumbermen Should Personally Visit Rural Customers and Offer Helpful Hints to Them

By Arthur Lynn

Most people the world over are holding back, or going slowly in the building line, waiting for better times they say, with lower priced material and cheaper labor. How long do they intend to wait? The would-be prophets, consulters of the ouija board, predict a collapse of prices in the very near future, but these same people if asked to consider a smaller salary, with prices of commodities lower would shudder at the suggestion. They are not the only unconscious hypocrites; we all are, more or less, inclined in that direction. We are tasting big money, talking millions instead of thousands. This universe is advancing in thought and high values are naturally remaining in our midst as we mount even higher in our financial and industrial careers.

True, values may fall but are we to go on year after year waiting for rock bottom bargains which may never be witnessed in this generation? Building has been curtailed in the last four years but is now striking its stride again in many parts of the Dominion. The farmers especially have been held up during the past few years in their structural and remodelling plans but are now forced to make many alterations not only in their barns, out-houses and machine sheds, but in dwelling houses. A new verandah is needed perhaps; the summer kitchen is intended to be replaced this summer and many other small repairs such as new flooring, built-in cabinets and sideboards, and a new door here and there. The family is growing and the farmer is becoming more prosperous and he finds the house must be up-to-date and more attractive to entertain the visitors of the younger folks. Perhaps a son coming home from overseas is tipping his dad off to some new ideas he has run across in his travels. A new motor car will in all probability require a garage or an extension made on one of the implement sheds, which will in most cases be constructed of lumber. The fence is always a big proposition to the farmer requiring a certain amount of lumber regardless of whatever kind it may be.

It will pay the dealer to become more friendly with the farmer in view of the extensive lumber he will absorb in his proposed building. A trip through your district and a talk with the farmer himself on the various interesting topics of the day, especially his lumber requirements, will place you in a far more advantageous position than letting him look for a merchant. Attractive illustrations of houses showing different designs of verandahs and porches with interior views of hardwood flooring, etc., rarely fail to interest a man that before was not quite sure of making these alterations and additions.

Little visits through the rural districts like this will perhaps lead to contracts that you cannot afford to lose. Someone has got to supply it and the man who gets on the ground first and puts it in the most attractive manner will get the business. Combine it with a pleasure trip and take your family along and show the farmer you are looking for honest business which will benefit both his interests and your own. Many improvements are postponed because the farmer is too busy to go after prices and estimates, but if they are placed before him while seated in his own living room, he will without a doubt be more than interested.

A very interesting method employed by a California lumber dealer was that of mailing to all the farmers in his district a leaflet showing how much lower the percentage of depreciation in machinery was affected by keeping it properly housed. By showing the farmer where he will make money in using lumber to good advantage is always a good argument and a true one.

Another effective advertisement by a lumber dealer was the offering of a prize in a country school for the best essay on "Thrift," referring especially to owning your own home and the advantages obtained by remodelling the old ones so as to make them attractive on inside as well as improving the outer appearance. This proved to be a great strike as the children naturally discussed the essay and asked the opinion of the parents at home. This was not an expensive venture by any means and was readily granted by the school master who helped the pupils in the advertising campaign.

Lumber dealers, who have built up a flourishing business connection with the farmer did not merely sell and deliver the material; they found out what use the lumber was being put to and then supplied some practical suggestions in an entirely voluntary capacity, such as a better ventilating system for the new barn; a good plan for the garage; how the farmer can save money constructing his new machine shed. In whatever line of construction he is contemplating suggestions of this sort will always be more than welcome. Many farmers are not too well versed in the building line and if the dealer helps him in a friendly way by showing him where he can economize in different ways the farmer will feel confident that he is not being taken in and will come again and tell his neighbors and friends of a practical lumber merchant.

How and Where Can They be Learned?

What is a salesman?
What is salesmanship?
How and where can it be learned?

The detailed answers to these questions would fill many large volumes, but the general answers would go into the notebook and be inscribed in the memory of every lumber salesman in the business, says the "Gulf Coast Lumberman."

Success today, in any field, is a matter of act, and if success is to be won, deeds, not mere diction, must count highest in the game. This is just as true of the professional field as it is of the commercial field. The doctor, for instance, who ranks highest with the modern patient is no longer the most talkative, the most complimentary, the most agreeable, the best-known about the town. He talks less—he even prescribes less. And one reason why it is so difficult to be a successful minister (already we have had to cut them down from from two and one-half hours to twenty minutes), is because there is so much more practice than one can preach. So, too, the business man (whether individually or in groups), to be successful, must do and stand for more than he merely talks about or listens to. To hold big meetings is all right—to deliver speeches is a sort of necessary evil, to applaud is generally compulsory, and to adjourn is invariably necessary; but these things, of themselves, do not necessarily make for the "Betterment of Business."

How and where can we better learn salesmanship?

Where can we learn salesmanship? At a sale, by analyzing it, and finding its component parts to be, introduction, attention, interest, conviction, desire and resolve.

Where can we learn salesmanship? At schools of Salesmanship—good schools—attend them, and let your salesmen attend them, where they will be taught the three well-defined steps to a sale, attracting attention, inspiring confidence, creating desire.

Where can we learn salesmanship? From books on Salesmanship—good books—read them, and let your salesmen read them—how they variously treat of personal appearance, manner of approach, arrangement of our selling talk, loyalty to our house, treatment of our competitor, enthusiasm, tact, persistence and the art of closing.

Where can we learn salesmanship? At the good salesman's elbow, noting his deportment—his cleanliness of habits—his agreeableness under all conditions—his faculty of doing the right thing no matter how difficult—his regular return of 125 per cent. work for 100 per cent. pay—his independence of supervision—his aptitude for doing his work a little better and a little bit quicker than the other fellow.

Where can we learn salesmanship? From the coaxing shop window—from the beckoning bill-board—from the magnetic magazine ad—from the persuasive paper—from the bribe-like bargain in the paper—from the tantalizing temptation—from the stimulating sermon—from the seductive smile—from the minister's menace—from the lawyer's lie—from the drummer's tone—from the huckster's holler—from every activity that makes for growth.

Sturtevant

REG US PAT OFF

PUTS AIR TO WORK

The Whirlwind that Sits on a Knife

and does as much work as all the men in your shop—who are in a much more comfortable position!

For no matter how hard they work at the machines—no matter how many chips, shavings, and how much dust and powder they make—a

Sturtevant

(TRADE MARK)

PLANING MILL SYSTEM

with its powerful draft right at the tool edge, carries them like lightning away outside, giving the workman every chance in the world to turn out his best work.

A Sturtevant Planing Mill System

—keeps the work nice and clean at all times

—leaves the air free from dust and powder, and wholesome for the workers to breathe

—allows no refuse to gather and form a fire risk

—prevents all litter which might work into the machines.

Special Bulletin No. 261 C tells of the benefits of Sturtevant Planing Mill Systems now in use by many mills

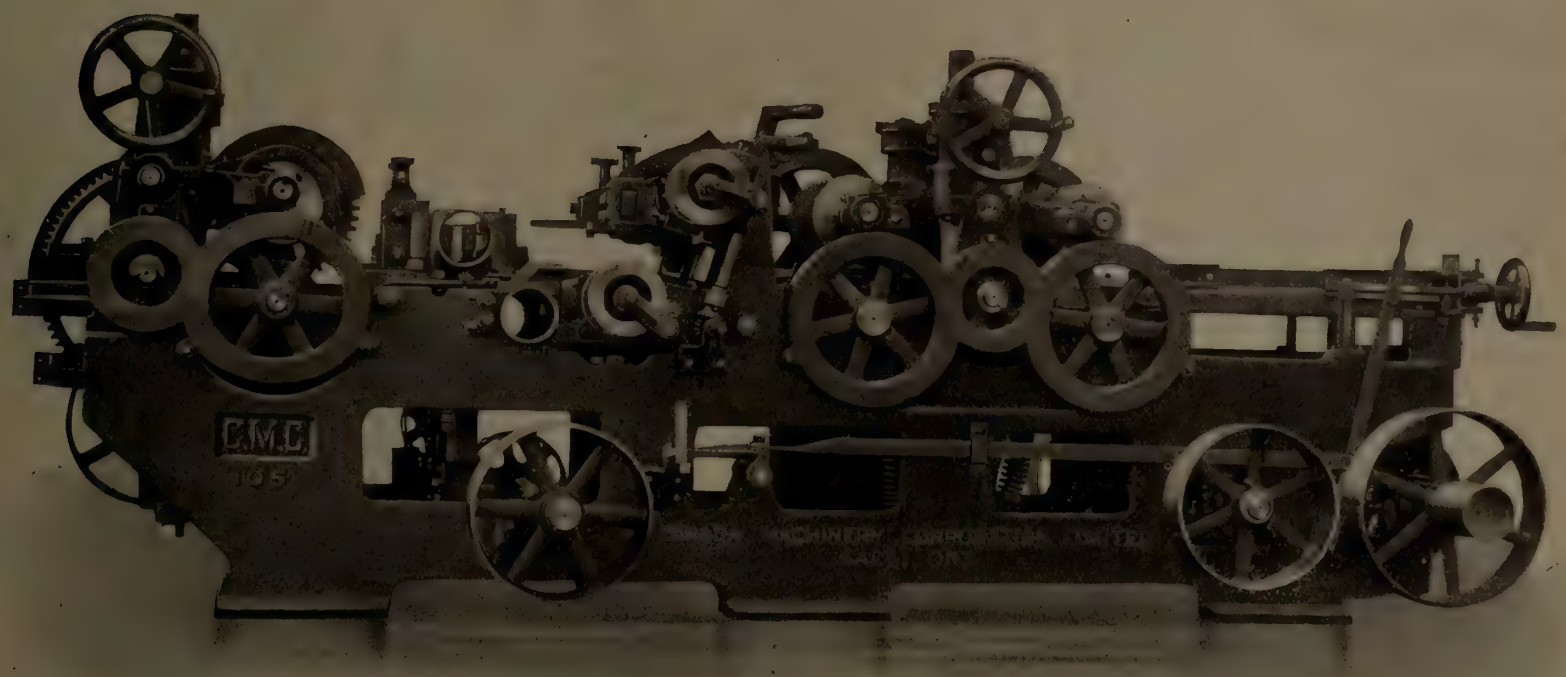
C.M.C. WOODWORKING MACHINERY

FOR ALL STANDARD REQUIREMENTS



C. M. C. NO. 105 HEAVY MEDIUM PLANER AND MATCHER
15″ x 16″

OUR NO. 105 HEAVY MEDIUM PLANER AND MATCHER is not a strictly fast feed machine. It is not intended to be used in conjunction with an automatic feeding table but it will dress stock smoothly as fast as it can be fed by hand. The maximum feed is 110 ft. per minute which rate of hand feeding cannot be maintained for any length of time by even the strongest man. In other words it is just the machine that the average large planing mill requires, being of sufficient strength and capacity but not excessively high in cost.

DOUBLE END TENONER.—We have placed upon the market a new and superior double end tenoner. The only modern one built in Canada and we would be pleased to send photographs and specifications to all parties interested.

We manufacture Planers, Matchers, Moulders, Shapers, Rip Saws, Band Saws, Cutoff Saws, Re-Saws, Mortisers, Tenoners, Boring Machines, etc.

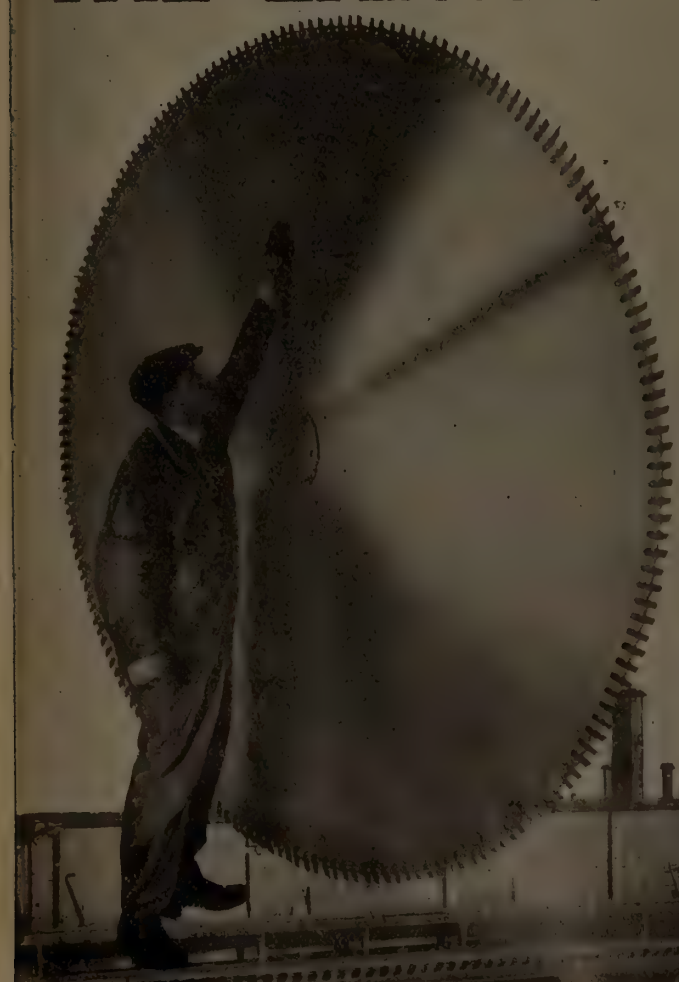
THE LARGEST SAWS IN THE WORLD



This is one of the two Disston cut-off saws in use at the Coats Shingle Company's Mill. These saws are 108 inches in diameter and each one weighs, ready to run, 795 pounds. 190 spiral teeth are inserted in each saw. The successful building of these saws affords a striking example of the advantages of Disston experience and facilities.

You may never need saws as large as this. You will be interested to know, however, that Disston workmen and Disston equipment are of the kind that makes the building of the largest saws in the world—and the best saws of all kinds—possible.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "Rotex"

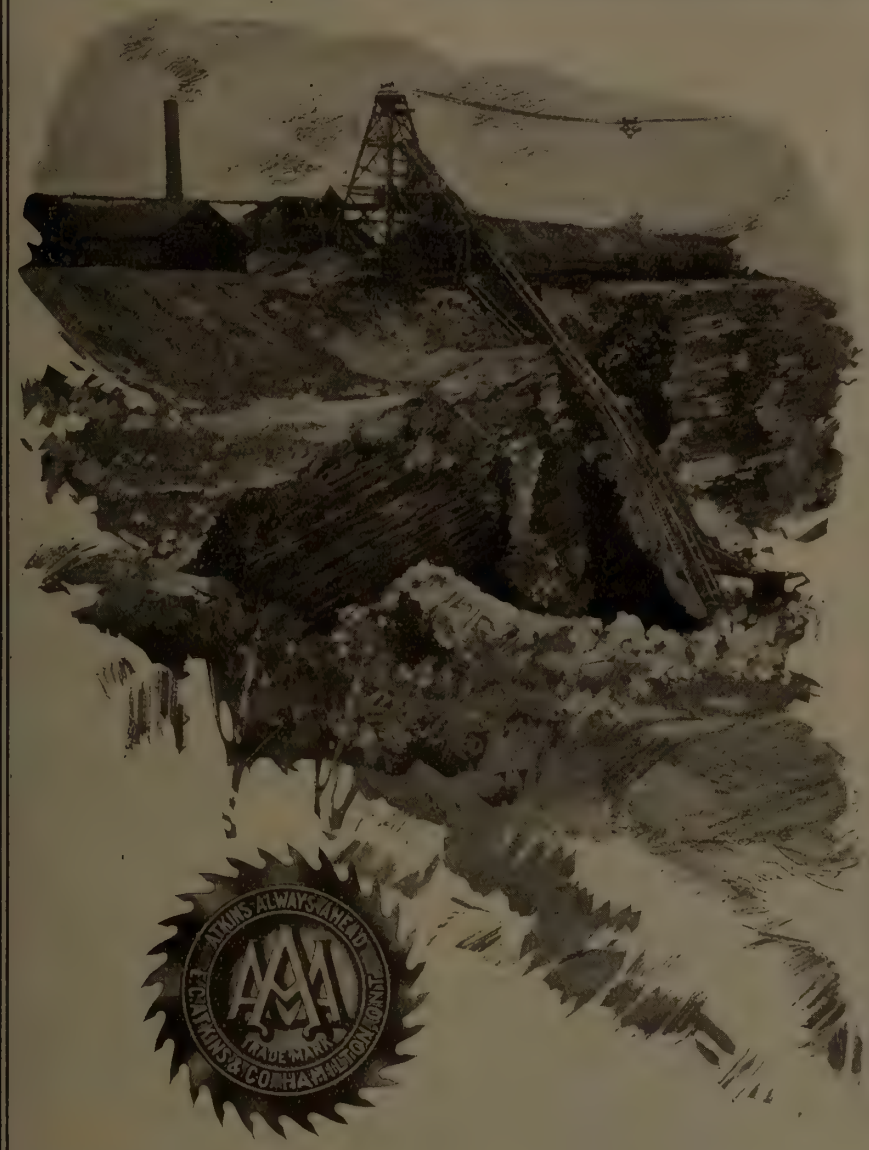
ATKINS STERLING QUALITY SAWS



VIRGIN ORE

When Elias C. Atkins began making saws 'way back in 1857 he realized that no steel manufacturer had at that time the correct formula for making as high a grade of steel as he determined to use in *his* saws.

Being an expert metallurgist he prepared his formula, which was based on Virgin Ore This formula contained many important elements that stamped it as the best that had ever been used. Experiments were carried on day by day and month after month, and after a long interval success was achieved—thus "Sterling Quality" saws were born.

This steel—*Atkins exclusive formula*—has the quality of receiving a hard, tough temper, stiff and firm; a quality that takes a keen, sharp cutting edge—a quality as fine as the material in high grade razors—that's "Sterling Quality" and it's not too good for Atkins Saws.

"Sterling Quality" Saws—made from Virgin Ore—are known the world over, and the constantly growing demand demonstrates their quality.

Have you Atkins Saws?
Write for literature!

THEY DO THE WORK

"The proof of the pudding is in the eating," and we are prepared to prove to you by the results actually obtained in the woods of Ontario by buyers of our GASOLINE DRIVEN LOADING AND SKIDDING MACHINES that they will do all we claim for them—and more.

These little Gasoline Loaders and Skidders will handle, with ease any log commonly found in Ontario and East, including Newfoundland.

We give you choice of either BELT DRIVE, as shown, or direct GEAR DRIVE.
We offer at present two sizes, SIX HORSE POWER, and TEN HORSE POWER. Either size will do the work. We have proved them out, and know what we are talking about. The 10 H.P. size will give you more reserve power for emergencies.

The price of either size is reasonable, and they will usually pay for themselves in the first season from the savings effected in labor, etc. We also build the same machine for using steam power.

GOODHUE BELTING For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 3½ in. steel, and has very wide bearings.

Seven Points to Remember About the "Bell"

It is oil burning.
It is operated by one man.
It has 50 % greater tractive power than the direct connected locomotive of equal weight.
Its construction is simple, strong and compact.
It is free from frequent repairs.
There are no sparks to fly out.
All parts are interchangeable and kept in stock for immediate delivery.

Speed Up Your Output with

"Bell" Oil Burning Geared Locomotives

Owners very often speak of their "Bell" Locomotives as "Little Giants." They have found these sturdy engines capable of hauling tremendous loads and to negotiate sharp curves and steep grades with apparent ease.

This is due of course to their superior design and construction—the work of highly skilled engineers whose training embraced a practical knowledge of the lumberman's requirements.

May we send you complete data and specifications?

Carson Quality

P.S. We carry a stock of harness, horse equipment, trunks, bags, and suitcases at our Brandon warehouse—from which point shipments can be made.

Ask about our Special No. 551 Farm Harness. It's a dandy.

A Pull Altogether

REMEMBER the old saying "A long pull—a strong pull—and a pull altogether?" Isn't that just what you demand of your harness?

You want a strong, reliable, efficient harness that will stand all strains—that will give you all the "pull" there is in your horses.

Such a harness is Carson's Famous Michigan Lumber and Skidding Harness—a harness built for heavy work and rough usage.

ASK US ABOUT IT.

Constant Service

This mark on your belting is a guarantee of absolute dependability. It represents the product of a manufacturer who is satisfied with only one standard of service-giving quality in every belt that leaves his hands.

D. K. McLaren's genuine oak tanned leather belting has for years been building a reputation which indicates its practical value to the men who use it.

D. K. McLaren's may be found on the heaviest drives and serving under the most exacting conditions where a belt of unvarying service, strength and dependability is essential.

Users are never disappointed.

The result is always the same with D. K. McLaren's. Always look for the trade mark when purchasing.

The Position of the Motor

Is one of the important features on the No. 135 Motor-driven Swing Saw as it is so placed as to assist the operator in pulling through the stock. This is the simplest and most efficient swing saw ever devised. Adjustable Headstock, saw guard that fully protects the operator and sturdy construction make it the logical swing saw to purchase.

Make Saws Cut And Planers Hum

Your saws may be well filed, swaged nicely and rounded perfectly, but unless your mill's belting is correct you do not get an honest day's work from your machinery.

You will find potential assistance and an increased output by using Graton & Knight Standardized Series Leather Belting. This series is composed of a number of brands and types of belting standardized both in manufacture and application.

Why not avail yourself of the opportunity of calling in a G & K engineer and letting him analyze your power transmission. You incur no obligation for this service. Your power transmission must be right if your production is going to be right.

Every G & K Belt will give rugged service because it is built for this kind of service. Your saws will cut and your planers will hum a real tune when your plant is standardized on G & K Leather Belting.

Industry Needed *Better* Hose —and Goodyear Built It

GOODYEAR Industrial Hose is built to meet modern industrial needs. Built as though hose had never been built before.

Breaking away from accepted but antiquated methods of hose building created Goodyear Industrial Hose —a hose that gives longer, more satisfactory service under present-day industrial conditions, and costs less in the end.

Water, Air Drill, Pneumatic Tool, Steam, Fire Hose—Goodyear studied and created a particular hose to meet the most exacting standards of each of these.

In the case of Steam Hose, Goodyear has done away with the inconveniences due to wire-winding—a choked hose due to bent wire, bulges and blisters under pressure; a racked tube and weakened fabric; the inconenience of cutting into shorter lengths, the utting of the hose by the wire.

Goodyear has made wire-winding on steam hose unnecessary, by developing a hose fabric strong enough to resist high pressure without the addition of wire. Compounded an inner tube capable of withstanding the effects of high-pressure steam. Fitted the hose with a tough, durable cover. Created a steam hose that will meet the severe conditions under which it is used—at a very low final cost.

Let a man trained by Goodyear in hose problems call and explain them to you. No obligation. Phone, wire or write the nearest branch.

Rubber Goods
FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

DEPENDABLE
WIRE ROPE

The strongest rope is none too good for service in the mill or camp. Here particularly a sudden break may result in loss of life or property—or a costly shutdown. To meet the severe tests imposed in this kind of work we have constructed steel wire ropes and cables best suited for logging and mill purposes.

Where unusual conditions require special equipment we cheerfully place our staff of laboratory experts and designers at your service.

LUMBERMEN'S EQUIPMENT

THIS Stationary Cylinder, Steam Nigger effects a tremendous saving where logs have formerly been handled by hand, by friction or the old fashioned oscillating niggers.

Possessing all the good qualities of the oscillating type, it has many others to commend its use. In the first place it occupies less space, there being no horizontal bar to come in the way of feed ropes, or conveyors. Second: the cylinder being stationary, permits all piping to be rigid, and allows lever connections between valves and lever, to be installed without any lost motion, thus guaranteeing the sawyer perfect control of the entire machine. The working strain instead of coming on the cylinders, heads and trunions, comes on the heavy cross heads and slides, removing all strains from the joints, and for this reason requires a minimum amount of packing. This will be appreciated, as with the oscillating type, there are always leaky joints, which are hard to keep tight. Third: the machine is much more self contained than the oscillating type, there being no jumping or rocking of the machine, when in motion. The two upright timbers, used to support the cylinders and slides, have a tendency to stiffen the mill at a weak point, and prevent the tooth bar from pounding the carriage track timbers out of alignment.

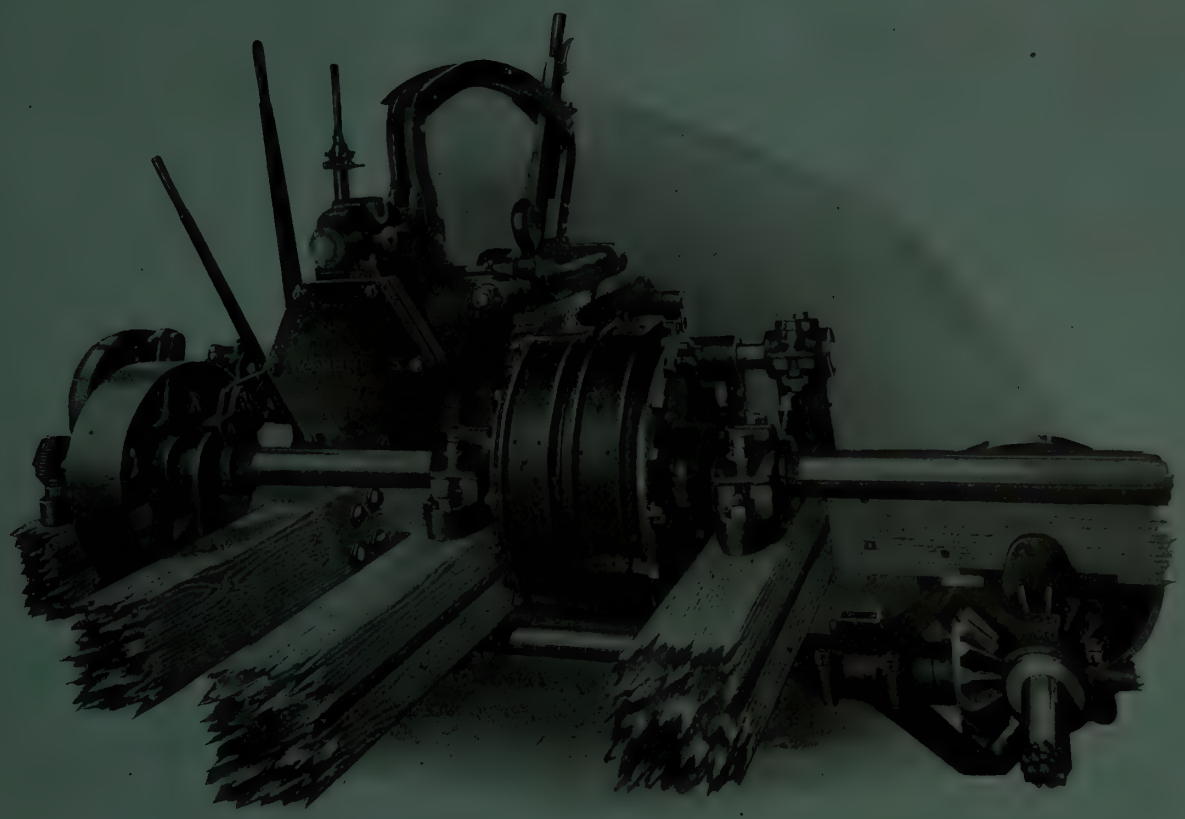
Let Steam Do Your Setting



The hardest worked employee in the ordinary Saw Mill is the setter. The handling of large logs calls for great muscular effort on his part, while his work on the smaller logs is almost equally laborious, as he has to put through a much larger number of them.

Every cut makes necessary a new adjustment of the log, which, in the absence of our Steam Set Works, is accomplished by a long throw of the hand lever. Before the end of his day's labor, the setter is usually exhausted. In many mills, the setter, because of the fatiguing nature of his duties, is not required to work for as many hours per day as the other employees.

All this is changed by our Steam Set Works, making the labor of the setter so much less arduous that he can do a full day's work. He is also enabled to set logs more quickly, thus increasing the number of cuts that can be made in a given time; and the lumber produced is materially improved in quality and regularity. Instead of the sawyer being kept waiting for the setter—the usual condition in ordinary saw mills—the reverse is true, and the setter is usually waiting for the sawyer.

It goes without saying that the main purpose of a sawmill is to produce as much good lumber as possible, at a minimum cost. As the cutting capacity of the mill depends mainly on the speed with which the logs are handled, the importance of an appliance which will shorten the time required to move logs into position for the next cut, is apparent.

The considerable saving of time effected by the use of these Set Works, together with the greater exactness in the thickness of the lumber thus obtained, accounts for the rapid adoption of this machine by mill men.

A pyramid of invaluable qualities which feature "Gripoly" Belting

Winning On Its Merits

There is no name better or more favourably known among the industrial plants of Great Britain than "Gripoly."

In Canada, too, this Belting is to be seen in great quantities—and the demand for it is steadily becoming more insistent. Particularly is this true of the lumber industry where the many virtues of "Gripoly" become so evident.

And there is no secret about its popularity — "Gripoly" is winning on its merits alone.

May we have the chance of explaining them to you?

Exclusive Representatives in Ontario for Nicola Pine Mills, Ltd., Merritt, B.C.

This 1920 Cut of
RED and WHITE PINE
is Quite Up to Hocken Standard

It represents the same high quality and has been given the same care in manufacture, grading and the many essentials that have always stamped our product as RIGHT.

This new cut is now ready for your requirements. If you want dressed lumber we have the milling facilities to supply it.

Better get in touch with us early, so that we can take good care of your coming needs in this fine cut of Red and White Pine.

HOCKEN LUMBER CO. LIMITED
630 Confederation Life Building, TORONTO
Phone Main 3153

The Demand is Due to Quality

We are firm believers in making the grade good.

When you unload a car from any of our stocks you feel satisfied you have VALUE—you received just what you ordered.

We have a little dry lumber ready for prompt shipment.

ROGERS BUILDING - VANCOUVER

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of **maximum value for their dollar.** If you have not used "Utility" grades, write us —no others produce them.

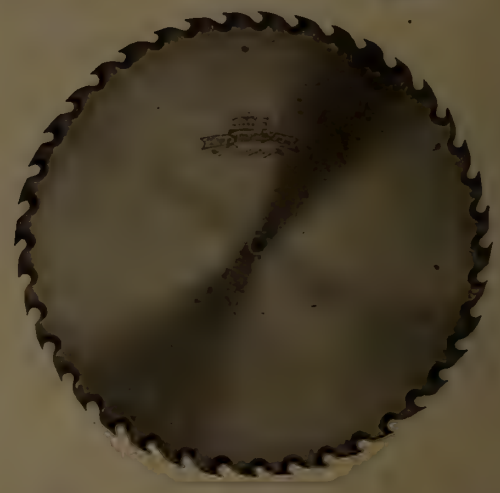
Simonds Saws



The name SIMONDS and the best saws are synonymous. Whenever you see the Simonds trade mark on a Circular, Band or Cross-Cut Saw you may be assured that the quality and workmanship is there. All Simonds Saws are made mechanically right. They are backed by 88 years of saw-making experience and are supplied with a foundation of the very finest steel—Simonds own steel—manufactured in Simonds Steel Mills. They hold their cutting-edge and tension, stand up to severe working conditions and do not crack.

Let us send you our illustrated catalog and price list.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40 Toronto, August 15, 1920 No. 16

The Backbone of Every Community

One hears much of the ideal community and the model home. Too often these are pictured only in fancy, but dreams often come true and if nothing was visualized there would be few realizations in life's undertakings. Imagination and ambition carry one on the road to sucess and contentment quite as far as those old-fashioned qualities of industry and application.

Every city and town in the Dominion is suffering from lack of housing accommodation. Many building associations and housing commissions have been formed to relieve the congestion. Among the organizations which are helping along such movements is the Southern Pine Association of New Orleans, which has recently issued an attractive booklet, entitled "Housing Plans for Cities." On the cover there is the slogan—"Building is the expression of a city's growth; lack of building is its stagnation."

It is interesting to recall the impulses of the movement behind the home building idea. All that is worth while in life, all that is dear, expressive, true and earnest, clusters around the home, which has often been described as "the heaven on earth." Any effort that will facilitate the building and owning or homes is, therefore, worthy of every support and encouragement. It is well known that a community of home owners is the most peaceful and prosperous of any on the globe. A city which enjoys steady, consistent progress and maintains its strength and activity during the ups and downs of commercial and industrial life, is the one where the majority of people own their houses, take a pride in their surroundings, become good citizens, develop public spirit and. in their own way, seek to get as much happiness out of life as they possibly can, and shed sunshine and cheerfulness on all sides.

The booklet "Housing Plans for Cities," tells what has been done where housing problems have been, in a large measure, solved, and the courses which have been followed in housing and own-a-home campaign. Much timely information is presented on how to carry out these laudable undertakings.

Some terse observations are given on the home situation which the retail lumberman might embody in his talks to customers and his publicity plans. Here are a few of the epigrams that stand out distinctly:

"The 'For Rent' sign has taken its place in many cities with the Dodo bird and other extinct features of by-gone days. With the departure of the 'For Rent' signs has come overcrowding of cities, attended by the evils of bad housing and industrial unrest. Every employer knows these conditions spell costly labor turnover, reduced efficiency of workers and increasing overhead charges. Production necessarialy is shortened and a train of industrial evils follows.

"A community of home owners is the ideal community. Such a happy condition makes for prosperity and contentment. The stability of the entire social and industrial fabric of the country revolves around the home.

"Any causes which restrict the opportunity for home owning strike at the foundations of modern industrial life. Workers who are not home owners are more easily subject to all the cross currents of unrest and radicalism. They lack the stamina and conservatism that home owning gives. They are constantly shifting. Employers know what this costs industry.

"Unfortunately, the present-day conditions have tended to restrict home owning. Perhaps it would be too much to say that inadequate housing is at the bottom of the present industrial unrest, but no one can doubt it has been a large, determining factor."

Keeping Aright Natural Resources

The Province of Quebec is generally admitted to have adopted a most progressive policy in matters relating to lumber. The province has been fortunate in having of late years Ministers of Lands and Forests who, although without technical knowledge, have taken into council men who know the needs of the lumber, pulp and paper industries. The government has recognized that Quebec has in its lumber resources one of the most important sources of wealth, and that these need conserving. The result of this recognition is seen in the co-operation with the limit holders in adopting means to guard the forests from fires, and also in legislation which protects the limit owner who spends large sums in the prevention and extinction of fires from the neglect of adjoining owners who refuse to take proper precautions.

We need only briefly refer to the legislation which laid the foundation stone of the ever-expanding pulp and paper industries. Had it not been for the law which restricts the export of pulpwood from Crown Lands we should not be in the position of being the owners of the finest pulp and paper plants in the world. We should, indeed, have continued to supply the raw materials for these industries and allowed others to benefit from the profits which attach to the manufacture of those materials into the semi-finished products. The advance made in this direction was made easier by the enlightened policy of the Government in the matter of water powers, enabling manufacturers to obtain a cheap and abundant supply of electrical power.

To Sir Lomer Gouin, who lately resigned the Premiership, must be accorded the chief credit for these progressive policies. The Hon. L. A. Taschereau, who now fills that position, has made it clear that he will not depart from the policy of his predecessor. In a speech at Quebec he outlined his programme. We cannot do better than quote his remarks on the subjects which interest our readers. They indicate that the work of reforestation which has been taken by the government, is to be expanded, and that in other directions measures will be taken to conserve the forest wealth and to develop the industries which are dependent upon the timber resources.

"The first article of my programme aims at continuing with vigor the bountiful policy of my predecessor, to develop it as much as it will permit, to enlarge and complete it accordingly as need arises.

"And first of all will be a jealous care and rigorous conservation

Manufacturers—What of the Tariff?

There are two big questions agitating the mind of the Canadian public—

Shall we buy Made-in-Canada goods?

Shall we continue to protect Canadian manufacturers?

Let us reason the thing out.

The sentiment of the Canadian people undoubtedly shouts "yes" to both questions.

But sentiment, to live, must be reciprocated.

What happens?

Foreign demand comes in. Higher prices are offered to the manufacturers. The home market is neglected. Those who would buy Canadian-made goods cannot get them because they are being supplied to foreign countries.

Or the price, protected by the tariff, is made prohibitive.

The manufacturer forgets about sentiment.

The home consumer is "sore."

It's a poor rule that won't work both ways.

What happens next?

The consumer goes without or buys foreign goods—partly from necessity, partly because he feels that the so-called sentiment is one-sided.

And he pays duty.

Why should I pay duty

"To protect the manufacturer who is making Canadian goods

"And then neglects the Canadian market?

"Let's reduce the tariff."

If

The Canadian manufacturer expects the Canadian people to be loyal to him—

To support a protective tariff and buy Made-in-Canada goods—

He must be loyal to them.

He must see to it—

That the home market is supplied first,

That the home price is based on cost of production,

And not on foreign demand,

Nor on the protection the tariff gives him.

Without doubt, the majority of Canadian manufacturers have been four-square with their old customers, but the average citizen sees only the "pirate." We all admit the existence of this species. He has ignored customers of long standing and sets prices not justified by costs.

A case in point:

It has been brought to our attention that a certain industry has been exporting eighty per cent. of its output to the United States. Further, the finished product for which it also supplies raw materials is sold in the United States at a lower price than the same product is sold to Canadians—by more than the amount of the duty. Further still—a combine makes it impossible for Canadians to buy in the States at the lower price.

The question is:

Shall we allow the "pirate" to wreck Canada's industries?

He must be curbed—it goes without saying.

Otherwise the people of Canada will accept him as typical of the manufacturing industry.

They will demand a removal of the tariff,

Throw sentiment to the four winds,

And buy in the cheapest and easiest market.

When the Dominion government gets around to the tariff question, the "Canada Lumberman and Woodworker" may have something further to say.

of our natural resources. We have 80,000,000 acres of unleased forests which need fire protection. For some time big white birds have been hovering over them. The hydroplanes have begun their patrol to locate fires at their outset. They will be supplemented by observation posts equipped with wireless telegraphy.

"The time has come, it appears to us, to regularize the cutting on limits by fixing a maximum of the annual cut to prevent the destruction of the forests, and a minimum to stop speculation and to assure us a reasonable revenue from the cutting rights. Reforestation should be immediately undertaken and encouraged with energy.

"I am giving you a few of the plans which are dear to the heart of the Minister of Lands and Forests. Not only will he send young engineers to study forestry science in Europe, but he is thinking of creating a paper school and a school for the cutters and forest rangers."

Saw Mill Waste for Paper

Writing to the "Manufacturers Record," G. W. Soule, of Meridian, Miss., scouts the idea that there is any shortage in the United States of material for the manufacture of paper. He claims that the waste (so-called) from logging operations and the production of lumber is sufficient to manufacture all the paper needed.

He speaks particularly of the parts of the pine trees left in the woods, the sawdust from the sawing of lumber and the shavings from the planing mills, and says that, of course, pine is not the best wood for paper stock; but goes on to say that there is an immense quantity of small gum, bay, cottonwood, etc., all of which is the best paper stock, all over the South.

Publishers of newspapers know that during the past few years the prices for paper have advanced 200 per cent. or more, and they have been impressed with the idea that the supply of paper-making wood is becoming so scarce that these prices were inevitable.

The Forest Products Laboratory at Madison, Wis., has conducted many experiments to determine the paper-making qualities of many woods, and it seems likely that that institution would have discovered this inexhaustible source of supply if it were available.

These woods may contain the qualities which make them possible sources for a supply of paper; but publishers are interested in the production of news print and the higher grades of paper such as are used in the publication of magazines and books. And, if pine, gum bay, cottonwood and many other woods are not suitable, the problems of the publishers, who use the bulk of this kind of paper, are no nearer solution than before.

A new edition of a map of Manitoba, Saskatchewan and Alberta giving the number of quarter-sections available for homestead entry in each township with the boundaries and offices of government land agencies has been issued by the Natural Resources Intelligence Branch of the Department of the Interior. This new edition clearly indicates all railways, forest reserves, parks and Indian reserves, also the land which has been reserved for soldier settlement purposes. The importance of the new edition at the present time is apparent to prospective settlers, officials of banks, railway companies and land agencies, in fact everyone interested in the development of land in the Western provinces. A copy of this publication which is known as the "Small Land Map of Manitoba, Saskatchewan and Alberta," may be obtained free of charge by applying to the Superintendent of the Natural Resources Intelligence Branch of the Department of the Interior, at Ottawa.

Public-spirited lumbermen in Canada and the United States are not opposed to a forest policy. They recognize that both national and industrial welfare demand early development of an aggressive forest policy which shall substitute for indifference and accident an intelligent, practical, equitable, and concerted program for the perpetuation of the forests: The members of the National Retail Lumber Dealers Association of Chicago recently enumerated:

That growing future timber crops must be largely though by no means wholly, a Government and State function;

That Government and States should be permitted to condemn any deforested land classified as suitable, chiefly for forest growing and pay for it at prices comparable to those paid in voluntary transaction;

That land classification and studies should be undertaken jointly by industry, States and Government;

That the Forest Service should be the recognized leader of public forestry thought and effort along general lines;

That wise conservation requires the determination of better methods of waste prevention and of utilization of the forests we already have;

That a successful forest policy means much more than tree-growing. It means confidence and security in every legal and commercial phase, to industry and public alike.

Retailers Ramble Through Northern Ontario

Annual Educational Trip Marked by Large Attendance, Splendid Welcome and Successful Fishing—Many Points Visited—Fine Timber and Busy Sawmills

The retail lumber dealers of Ontario have held many annual outings, but the one which took place from July 29th to August 2nd throughout the North Bay district stands forth as the peer of all pilgrimages from an educational, recreational, scenic and every other viewpoint.

About 75 distributors of wood products from various parts of the province, as far west as Chatham and as far east as Ottawa, participated in the trip and will long remember its delightful associations and pleasant pursuits. The lumber manufacturers of Callander, Trout Mills, Cache Bay, and North Bay and the Sturgeon Falls Division of the Spanish River Pulp & Paper Mills, did everything possible to entertain and instruct the visitors. Every one returned with a larger conception of the vastness and importance of Northern Ontario, its fertility of soil, its agricultural, mining, lumbering, transportation and water power facilities, and above all fully realizing the outstanding urgency, economic consideration and national aspect of the French River scheme, which would provide not only unlimited "white coal" for the north but would in many other ways help to link up the west and east of the Dominion.

Northern Ontario is rich and varied in resources and marvellous are the products that can be grown with gratifying results. The vast territory has only touched the fringe of prosperity and development. With every encouragement in the way of substantial grants for good roads, the construction of "The French River—a natural waterway" and the development of the many waterpowers now unharnessed, there is no reason why this great inland empire should not expand along many other avenues as rapidly as it has in the pulp and paper arena. Twenty-five years ago there was not a pulp paper mill of any description in this spacious hinterland. Today there are half a dozen towns which are busy, flourishing centres, and judging from present indications, many more industries in this line will be placed on the map within the next two or three years.

But this is not a story of the French River, Northern Ontario, its splendid potentialities nor the magnificent future which awaits that portion of the province, neither is it a record of the progress which has been made in the past and achievements effected in the face of many obstacles, but rather is it a running report of what the retail lumbermen saw and did during five days' absence from their respective towns.

No attempt is made in this edition to set forth the special time and labor-saving features, history, systems, equipment and processes employed in the various saw mills inspected. These will be presented at considerable length and with valuable illustrations in the annual Camp and Supply Number of the "Canada Lumberman" which will be published on Sept. 1st. In the present edition an outline is given of the points visited and what the retailers of wood goods did from day to day in the way of sightseeing, motoring, sailing, feasting, fishing and exploring.

The Arrival at North Bay

Arriving at North Bay the sojourners made their headquarters at the Pacific and Queen's hotels and about ten o'clock set out in automobiles provided by the town and its enterprising citizens and lumbermen to Callander, nine miles south-east. This is a busy place with two busy mills. The first plant visited was the Callander Saw Mills, owned by A. B. Gordon & Co., where an hour was pleasantly spent and the guests conducted all over the mill and yards. The mill is being painted and the surroundings are neat and well laid out. The officials of the company gave the sightseers a warm welcome. On the route to Callander the attractive summer homes near Lakeview Park on Lake Nipissing, belonging to Duncan McLaren, of the Union Lumber Co., Toronto, and A. B. Gordon, Toronto, were passed.

At noon the members of the party along with several leading citizens of Callander and North Bay were entertained to luncheon at the summer home of James H. Smith of John B. Smith and Sons, Limited, who is the manager of the company's operations at this point. W. J. Smith, of Toronto, president of the company, was also present and joined in the welcome along with several ladies, who waited upon the tables which were laden with viands of the most tempting character. The luncheon was admirably arranged and too much praise cannot be bestowed on the firm of their kindness and hospitality. Full justice was done to the excellent repast, previous to which the visitors were photographed on the lawn.

C. R. Harrison, M.P., North Bay, on behalf of the citizens of that district spoke of the pleasure which it gave them to welcome such a distinguished body as the retail lumbermen of Ontario. While he was a railway man, and had been one all his life, he recognized

THE LUMBER MERCHANTS OF ONTARIO AT STURGEON FALLS,

and some of their hosts. At the extreme left of the front row are seen Hon. George Gordon, of North Bay and A. Kavanaugh, Supt. of the Sturgeon Falls' pulp and paper activities. The gentleman with the white beard is James Harriman of Niagara Falls, now in his 75th year. He was one of the most active in the party on the entire five days' trip.

the worth and extent of the great lumber industry of Canada and the men who were engaged in it. They dealt in the finished product and had built up large plants employing thousands. He hoped that legislation would be introduced by parliament to restrict further the export of pulpwood from the country, which would result in the building up of more mills in the Dominion.

Dr. J. B. McDougall, of North Bay, assistant chief inspector of schools, Department of Education, also extended greetings to the guests and dwelt eloquently upon the importance of the French River improvement plan and what it would do not only for Northern Ontario but all the cities of the province, in the way of transportation, lessened freight rates, industrial and agricultural development.

Mayor John Ferguson, of North Bay, and W. J. Smith, of Toronto, followed with expressions of goodwill and hearty salutations, which were suitably acknowledged by John B. Reid, of Toronto, president of the Ontario Retail Lumber Dealers' Association, who was in a happy vein. His sprightly remarks put all in good humor as he told of the progress of the organization, its aims and objects, work and worth and cordially thanked all for the way in which they were being entertained. Mr. Reid said that the dinner which they

On the left is Jas. H. Smith of Callander. Next to him is John B. Reid, Toronto, and on the right is W. J. Smith, President of John B. Smith & Sons, Toronto, as snapped at the annual outing of the O.R.L.D.A.

had all enjoyed was fit for Royalty and could not be surpassed by the commissariat department of the King Edward Hotel. He also paid a well deserved tribute to the ladies.

After the dinner the mill of John B. Smith and Sons was toured and all the members of the party given a ride on flat cars behind one of the locomotives of the firm throughout the extensive yards. There are some nine miles of tracks and sidings belonging to the company.

The Route to Trout Mills

The lumbermen re-entered the waiting fleet of automobiles and were conveyed to North Bay and then three miles east of the town to Trout Mills on Trout Lake where the plant of William Mile and Sons is located. There they saw some of the finest and largest white pine logs, which it has ever been their pleasure to witness, being band sawed. The operation of handling the huge sticks was watched with much interest and favorable comments made upon the superior character of the timber, not only as to its quality but also quantity. Wonder was depicted on the facial expression of the visitors, many of whom remarked that they did not thing such monster sentinels of the forest were obtainable on any limits in the province of Ontario.

The next order on the programme was back to North Bay for the evening. This was followed by an informal reception on the grounds of Mayor John Ferguson, who has a spacious and attractive home right in the centre of the town, the main street of which is now being permanently paved. The Mayor's property is the site of the first house erected in North Bay. The members of the Town Council, the Board of Trade, the Board of Educaation and other bodies were invited to the function. Refreshments were served on the lawn which was brilliantly lighted while the floral and other decorations imparted to the environs a gala appearance. Mrs. Ferguson joined with her genial husband in greeting all the arrivals and there was an abundance of music and dancing. An informal programme of speeches followed. J. W. Richardson, president of the North Bay Board of Trade, presided and told of the pleasure which it afforded all the citizenss to have with them the retail lumbermen of Ontario in such large numbers. He was sure they would carry back larger visions of the importance and potentialities of Northern Ontario and the great progress which it was making.

The Development of the North

A rousing address on the claims which Northern Ontario has on the remainder of the province was delivered by J. H. Marceau, M.P.P., North Bay, who is no stranger to the lumber business. He said that a billion feet of lumber had been taken out of the Lake Nipissing district during the past twenty-five years and there was a great deal left yet. Fully fifty per cent. of the annual mining output of the Dominion came out of that portion of the province. Northern Ontario paid into the revenue of the province annually three million dollars and was getting back only a little over two million dollars which was out of all proportion of what Old Ontario received. The people of North Bay and district wanted the other parts of Ontario to know the north better and assist them in the work of development of their great natural resources in the way of good roads, better means of communication and transportation and industrial and agricultural expansion. Mr. Marceau is certainly a great booster for the North and his remarks were sympathetically received.

W. J. Smith, of Toronto, spoke of the necessity of greater production on the part of the people of the province and the urgency of thrift to meet the days that were to come. He referred to the rapid development of the North and the essentiality of water routes, the railways being unable to handle expeditiously all products of the country. The completion of the French river route was of the most vital importance in the way of cheaper transportation, cheaper coal and cheaper power and affording the Canadian National Railways and the Canadian Pacific Railway new grain routes to the seaboard, shorter than the Buffalo to New York haul, and thereby diverting the flow of Canadian wheat and other products now going to American Atlantic ports.

Brief addresses of welcome and pointing out the great interests of the hinterland were also made by Mayor Ferguson and Hon. George Gordon, of North Bay. President John B. Reid, of the O. R. L. D. A., and Secretary Boultbee, of Toronto, also spoke and warmly thanked the chief magistrate of North Bay and the citizens of that progressive railway centre for their splendid reception and entertainment.

The Jaunt to Cache Bay

Early next morning, the train was boarded for Cache Bay twenty eight miles northwest, where the extensive and modern sawmill and planing mill of George Gordon and Co. was visited. Here the party spent a most delightful time and were shown over the industry by B. Bain, superintendent of the mill which possess many economic features.

The touring lumber merchants were entertained to a splendid repast, which was thoroughly appreciated and enjoyed. The host, Hon. George Gordon, presided and after the inner man was more than satisfied and the choice Havanas passed around, there was a short series of speeches. Senator Gordon expressed his extreme pleasure in having present such a representative and vigilant body as the retail lumbermen of Ontario who occupied a most important place as distributors of the product of the sawmills. He warmly congratulated the O. R. L. D. A. on its progress and growth and the splendid co-operative lines along which the organization was working for the welfare and advancement of the industry. "I cannot tell you," he added, "how much we appreciate your visit and we hope that it will not be long before you again favor us with your presence and bring along as many of your friends as you can with you."

A. J. Young, of North Bay and Toronto, was well received as he told of coming to Cache Bay for the first time in 1883 when the C. P. R. was being built and helped to clear some of the land on which the town now stood. Mr. Young, who is a former Mayor of Cache Bay, referred to the great progress that the town had made and gave some interesting reminiscences of its incorporation, the introduction of electric light and other civic improvements. Hon. George Gordon had taken hold of the mills at North Bay when they were in liquidation years ago and had improved and extended their operation and built up the large business which they were doing at the present time for which he (Senator Gordon) deserved every credit. Mr. Young added that the retail lumberman was of value and usefulness to the district in which each one resided as the retailer came

On the left, the retail lumbermen are seen assembled on the lawn of Jas. H. Smith's residence at Callander. The next view is that of civic welcome at Sturgeon Falls showing the handsome arch erected in their honor. Some of the fish caught at the Chaudiere Falls on the French River by enthusiastic anglers completes this pictorial reel

next to the consumer and carried on a most important work as a distributor. He referred to the investigation in timber limits which was being conducted by the Department of Lands and Forests and said that the press had endeavored to convey the impression that the lumbermen were profiteers. He warmly refuted the allegation that there had been any combine or understanding on their part to raise prices. ,'I have," he continued, "been engaged in the lumber line all my life and so far as I have come in contact with them during that period, the lumbermen are as upright and honorable a body of men as are engaged in any business in Canada. (aplause). Proceeding, he said that lumber was one of the commodities the prices of which were fixed by the inexorable law of supply and demand. World values governed the market in Canada not only in lumber but in every other line. For sharing in the advances naturally brought about no member of the industry could be blamed. The lumberman had a perfect right to do so in order that he could take care of his losses when they came. Mr. Young hoped on their return to their several homes they would "speak a good word for the North."

C. R. Harrison, M. P., spoke briefly telling of his first visit to Cache Bay as a brakesman in the days when A. J. Young was Mayor of the town. He touched upon the advance that had been made on all sides.

E. D. Jessup, Mayor of Cache Bay, who is now postmaster of that town, to which he came in 1885, extended hearty greetings on behalf of the citizens and told of what Hon. Mr. Gordon had done for the prosperity of the place.

No Culls in Retail Ranks

President John B. Reid spoke on behalf of the retailers and thanked Senator Gordon for referring to them as the "uppers in the lumber business." "There is not a cull among us" added Mr. Reid, amid much laughter. "We take an annual trip and have always been welcomed with open arms. Each year it would seem as if the part of the manufacturers to entertain us could not be surpassed. This is an educational tour with a moral aspect and we are living up to our high reputation. ,No longer is the retail lumber dealer looked upon with suspicion because he belongs to a progressive organization like ours which has removed petty jealousies in our ranks, raised the dignity and standard of our business and shown what co-operation and good will can bring about in the way of welfare and progress. Where will you find a finer body of men than those gathered here today, all engaged in the same line of business and meeting on a most friendly footing. Our membership is growing rapidly and the ideas and ideals of the retail dealer have been elevated with the result that better service and sounder and wiser business methods are now in evidence among us."

Senator Gordon referred to the investigation which had been conducted by the Ontario government in which it was sought to cast aspersions on the conduct of the limit holders and the manufacturers of lumber. An attempt had been made to make the people believe that they, the lumbermen, were dishonest. Personally he was perfect willing to have any man look into his books and examine all his business methods. He added that so far as his jurisdiction extended there was absolutely nothing that he had to be ashamed of and he believed that the business of all lumbermen was honorably conducted. The pine timber in Ontario had brought more per square mile than that of any other country in the world. In Quebec limits had brought from five to six thousand dollars per square mile while in Ontario they had been sold as high as thirty and forty thousand dollars. Much had been said about overruns and it was well known that the Doyle rule did not give the full contents of the log as produced at the mill. Other rules also had defects. It was easy, however, for the provincial authorities to measure the logs at the mill and then the product as it came from the saws. In his career he had come in contact with many lumbermen and they were all men of whom he was proud. The Senator resented the imputation that they were dishonest or profiteers, and that they had "got millions for nothing or next to it." He had been in business at Cache Bay for twenty years and for a long period had not slept, wondering where the next pay roll for his employees was to come from. He could count on the fingers of his hands the number of lumber manufacturers who had survived in the struggle. The few, who had succeeded had done so by applying themselves diligently to business and by exercising industry, thrift, self-denial and foresight, which had enabled them to overcome many obstacles (applause).

The gathering broke up with cheers for Mr. Gordon, Cache Bay and the ladies.

The Trip to Sturgeon Falls

Motors were once more taken and that active pulp and paper centre, Sturgeon Falls, three or four miles east of Cache Bay was next on the itinerary. An evergreen arch spanned the main entrance to the hustling town and bore the magic words "Welcome O. R. L. D. A." A. Kavanaugh, superintendent of the Sturgeon Falls industries of the Spanish River Pulp and Paper Co., which employs seven hundred persons at the Falls, welcomed the guests to the town on behalf of the company. Civic greetings were extended by His Worship Mayor James Lillie.

The party divided into groups of ten and for two hours were in the hands of competent and courteous guides who explained every process of converting the spruce logs into pulp and paper from the slasher to the finishing room. The trip was full of interest and many revelations were afforded the guests, not a few of whom had never seen chemical or ground wood pulp or newsprint in the process of manufacture. There are two kinds of wood pulps, one known

At the Chaudiere Falls, French River (left to right) Pres. John B. Reid (Toronto) in fishing attire. Mayor John Ferguson, of North Bay, and John Barry, of Toronto, who captured the porcupine which was the mascot of the retail lumbermen's party.

as ground or mechanical and the other as chemical. The first is the cheapest, and is used chiefly for making newsprint and wrapping paper. Spruce wood is most commonly used because it is cheap and gummy, the latter quality being valuable in that it adds much to the tenacity of the material made from the pulp. Chemical wood pulp is made by cutting up spruce and poplar logs into small chips, which are then placed with a liquid preparation in huge tanks to be digested.

From Spruce to Newsprint

After going through every portion of the various units the party adjourned to a local theatre where an eight reel film was shown entitled "From Spruce to Newsprint," all the views being taken from the operations of the Spanish River Co., who employ some five thousand men in woods operations and have extensive plants at Sault Ste. Marie, Espanola and Sturgeon Falls.

The barking room at the latter place is equipped with three large drum barkers and several disc barkers while there are two chippers. There are in the sulphite pulp mill two digesters, 16 x 54 feet, with a daily output of 60 tons. In the ground wood pulp plant there are twenty-one grinders and twenty six wet machines with an

Splendid specimens of white pine logs taken out by Wm. Milne & Sons, North Bay, Ont., at Mileage 26, on the T. & N. O. Railway. These logs were the finest and largest seen by the retail lumbermen of Ontario on their recent trip to the North.

average daily production of 130 tons while in the newsprint plant there are two paper machines, each 120 nches wide, turning out 75 tons a day of paper. A third machine, 166 inches wide, is being installed which will bring the daily delivery up to 135 tons. The company generates its own electric power—3,500 h.p. Sturgeon Falls is a live, go a head municipality with splendid residences, recreation grounds and all that tends to make the life of the employees happy, cheerful and contented.

After witnessing the picture of the conversion of spruce into paper, the lumbermen were regaled at luncheon in the club room which is for the benefit of the employees. Here a spread, both tempting and varied, was partaken of by all. Supt. Kavanaugh presided and speech-making followed by Mayor Lillie, President J. B. Reid, Senator Gordon, A. J. Young, Frank Kent, (Toronto); Theo Legault, (Sturgeon Falls); Rev. Father Lecuyer, (Sturgeon Falls); Rev. Canon Piercy, (Sturgeon Falls), and others.

It was stated by one of the speakers, that the building in which they were assembled, was on the site of the old portage of the Hudson's Bay Company and that the first white child in the Nipissing district was born at Sturgeon Falls.

Senator Gordon, in his remarks, said that the newspaper publishers were themselves largely to blame for the present high cost of paper by seeking to have the Federal authorities arbitrarily control the price. The press had not given the newsprint manufacturers a square deal. The publishers had sought regulation and price fixing of the product during the war. The result was that large concerns, which had contemplated extensions, had not gone on with the undertakings owing to capital hesitating, and interference with the natural economic law of supply and demand. The outcome was delay in the work of installing additional machines and a consequent shortage in the print paper business today that was very acute. Had there been no attempt to throttle the industry, there would have been a far greater output at the present juncture. The supply would have equalled the requirements and more plants have been in operation throughout the Dominion.

Fishing and Camping at the Falls

The lumbermen were escorted to the C. P. R. station and left on the evening train for North Bay, with the kindliest feeling for the people of Cache Bay and Sturgeon Falls.

On Sunday morning the steamer Northern Belle plying between North Bay and Chaudiere Falls was taken for a thirty-four mile sail across Lake Nipissing and up the majestic French River, the scenic beauties of which are impressive. Capt. A. McKinney of the Northern Belle looked well after the comfort of his passengers and arriving at the Alabama hotel, at Chaudiere Falls, the party disembarked and enjoyed a refreshing dinner early in the afternoon. Capt. J. A. Clark is the proprietor of the Alabama hotel which was opened up for the occasion, having been closed since the war but blankets, provisions and everything needful for a couple of days rest and fishing were provided. Here the majority of the boys stayed until Monday evening, August 2nd, when they boarded the steamer for the return trip to North Bay and entrained at ten-thirty that night in two special pullmans reaching Toronto early on Tuesday morning, August 3rd, "happy to meet, sorry to part, happy to meet again—in 1921."

Notes and Jottings of the Trip

The champion fisherman of the party was F. W. Bryan, of the Bryan Mfg. Co., Collingwood. He caught a black bass which tipped the beam at 3¼ lbs. The second largest specimen landed was by Horace Boultbee, secretary of the Association. His capture weighed 3½ lbs. The aggregate of the first day's catch by the many anglers in the party was 103 fish, consisting chiefly of black and rock bass, with a sprinkling of pickerel and pike.

One of the interesting points passed on the journey to Chaudiere Falls was the habitation of the Solid Comfort Fishing Club, about three miles east of Chaudiere Falls. This club, which has been established for years, consists of about 150 members, principally residents of Pittsburgh, who make their summer home in Northern Ontario, where they have admirable sleeping quarters and every convenience to make life pleasant.

Mayor John Ferguson, of North Bay, is what the American "doughboys" would term a "reg'lar fellow." He was on the job all the while and accompanied the retailers on their trip to Chaudiere Falls where he spent two days with them and was never weary in looking after the comfort and welfare of the members of the party. Mayor Ferguson is one of the leading citizens of North Bay, where he has large property holdings and has always taken a lively interest in the progress and development of Northern Ontario. The retail lumbermen voted him as being the livest wire in the whole aggregation, and if His Worship ever aspires for federal parliamentary honors, a seat in the Canadian Senate or any other exalted position, he will have the hearty endorsation and undivided support of the lumber merchants of Ontario.

While the lumbermen were at North Bay Hon. Arthur Meighen, the new Canadian Premier, passed through on the C. P. R. on his way to the West. John B. Reid, president of the O. R. L. D. A., and Horace Boultbee, secretary, were invited by C. R. Harrison, M. P., of Nipissing, to join the Premier, which they did and rode in his private car to Cache Bay. There the president and secretary rejoined the other members of the group of lumbermen who were being conducted through the splendid sawmill of George Gordon & Co. Mr. Boultbee is an old college associate of the prime minister and had not seen him for nearly a quarter of a century. They had a very pleasant chat on the short journey to Cache Bay while the gallant Mr. Reid engaged in conversation with Mrs. Meighen and family.

Through the courtesy of the Spanish River News, the bright weekly sheet published by the Spanish Pulp and Paper Mills at Sault Ste. Marie, Ont., the "Canada Lumberman" is able to present several illustrations of the industries of the company and scenes in and around Sturgeon Falls, which were seen by the visiting retail lumbermen on their travels to that enterprising town.

John Barry, who has been thirty-seven years with John B. Smith & Sons, Toronto, was on hand morning, noon and night and enjoyed the outing to Chaudiere Falls. He is a familiar figure in the north and paid several visits to the Indians on the French River Reserve, calling upon Chief Dokies and other leading members of the contingent who are descendants from the Chippawas. The Indians are happy, well-to-do and comfortably housed, many of them possessing motor boats, cultivating vegetable gardens and raising

flowers. They are all well-fixed financially, the white pine on their limits having been sold some years ago for considerably over $1,000,000, a small proportion of which was paid to them direct in cash. The interest on the residue is handed over to the Indians in the shape of a remittance twice a year from the Indian Department at Ottawa. Each member of the Reserve, nearly a hundred in all, whether adult or child, shares equally in the division of the revenue from the big timber sale. There is still unsold about 1,000,000 feet of birch, maple and basswood on the Reserve.

Charlie Coates lost the fishing championship which he won last year. He, however, managed to land a nice string of bass but the big ones were missing.

The retail lumbermen discovered a new kind of pine while exploring the French River country. There is now white pine, Norway pine, jack-pine and porcu-pine. John Barry was the only dealer in the latter commody and from long acquaintance with this kind of pine, he can grade it properly every time.

Many excursionists spent several hours picking blueberries which grow in thick clusters on short vines all over the rocky slopes. Hundreds of quarts of blueberries annually go unpicked and campers could sustain themselves for several weeks on berries if there were no other foods available. There are also cranberries to be found in and around the French River.

During the stay of the party at the Alabama Hotel they were visited by several members of the Indian reserve, including Chief Dokies who was the guest of the "Chief of the Pale Faces,"—John Barry.

Cyril T. Young, of Toronto, head of the Eastern Lands Department of the Canadian National Railways, was a welcome visitor, while the boys were at North Bay. He also accompanied them to Chaudiere Falls. Mr. Young is familiar with all the resources and development of the great north, paying frequent visits to all parts of the country. He was called upon at Cache Bay for an address but excused himself on the ground that he came to see and hear and not to speak. He was given a cordial reception but no plaudits could induce him to "deliver a few remarks."

Those who ably assisted Mayor Ferguson, of North Bay, in making arrangements for the entertainment of the lumbermen were Lieut.-Col. W. H. Milne, W. A. Cockburn and others, while Hon. George Gordon, A. J. Young, Fred Milne, A. B. Gordon, W. J. Bell and other representatives of the lumber interests of the great north were greeted by friends on all sides.

The number who took in the entire trip was about seventy-five. The oldest member of the party was James Harriman, of Niagara Falls, Ont., who is in his 75th year. He was as active as the youngest recruit and enjoyed every minute of the jaunt.

The "camera fiends" were C. H. Roper, Hamilton; Chas. L. Coates, Burlington; Alex. Rhind, Toronto, and H. Boultbee, Toronto.

So alluring was the spectacle at the Falls and so attractive the angling that President J. B. Reid and Secretary Horace Boultbee remained over for a week, "keeping batch," and roughing it in order to deplete the northern waters of all the members of the finny tribe. They had great luck, and on the excursionists leaving these two lone gentlemen behind, the latter were accorded a great cheer and wished every success in their piscatorial pleasures.

John B. Smith & Sons have certainly extensive interests at Callander where they own 550 acres of land and 80 buildings in connection with their operations, as well as 9 miles of railway sidings and tracks throughout their yards. The company enjoy excellent connection with both the C. P. R. and the G. T. R. and can pile 30,000,000 feet of lumber on their property without any back-piling.

Every place the lumberman visited the Mayor was there to greet them. At Cache Bay, Mayor E. D. Jessup, who is also postmaster of the town, was on hand to do the honors, while at Sturgeon Falls Mayor James Little, who is a progressive hardware merchant in that pulp and paper centre of 5000 population, made many friends by his genial manner and kindly disposition.

While he was not successful in catching any big fish, the most unique capture of the day was a large-sized porcupine which John Barry, of Toronto, noticed far out on the branch of a tree. He climbed the tree and the animal jumped off into the water, barely missing the head of Geo. N. Kernohan, of London, who was sitting in a canoe, swam ashore and started clambering over the rocks. It finally dropped into a crevice, and, after a fight, Mr. Barry was successful in getting a strong cord around its tail. He brought the sharp-quilled quadruped up to the hotel, and as some of the boys had not yet risen from their slumbers, they were awakened with a start by this new "species of New Ontario bed bug." The porcupine was the mascot of the party for several hours in the morning and disported himself with commendable demeanor under the expert training of Mr. Barry. Mr. Porcupine was finally released and spent the rest of the day under the broad piazza of the hotel.

A Kavanaugh, superintendent of the Sturgeon Fallls industries of the Spanish River Pulp & Paper Co., is large in girth, and short in stature. He made a capable presiding officer at the banquet tendered the visitors and in the play of wit and repartee was able to hold his own with anyone in the company.

"J. B." seems to be the popular initials of retail lumberman—to wit, J. B. Reid, Toronto; J. B. Mackenzie, Georgetown; J. B. Mustard, of Brucefield; and a few others too numerous to mention.

The excellent group portrait of the boys which was taken at Sturgeon Falls, is the work of Irmand LeBel, photographer of that town, who is certainly an artist in his line.

Some Navigation and Power Facts

The following data in reference to the French River improvement will be perused with interest:

The Government has completed exhaustive surveys, prepared detailed plans and revised estimates, making possible immediate resumption of the work upon which has already been expended a considerable portion of the appropriation of $500,000 in the construction of Chaudiere Falls dam, which controls the water level of Lake Nipissing.

Lake Nipissing provides an immense summit reservoir with an area of 320 square miles and has a total drainage area of 4,077 square miles, largely consisting of forest reserve.

Deep water protected harbors providing ample searoom for the largest lake carriers exist on the northern shoreline of the lake at Cache Bay, Sturgeon Falls, North Bay and Callander, and the three transcontinental railway systems serving these points have acquired miles of water frontage awaiting the completion of this waterway.

The inviting summer home of James H. Smith at Callander where the touring lumbermen were splendidly entertained

The distance from Georgian Bay to the deep water of Lake Nipissing is 49 miles, and the distance from Georgian Bay to North Bay is 83 miles. If the canal work which occurs mainly at the lock approaches were combined it would total only three-quarters of a mile of actual canal work. The steamer trip will occupy about 9 hours. The depth of water will be 22 ft. over a surface of 350 ft. to 2,000 ft. wide, with less curvature than St. Mary's or St. Clair River.

Three locks overcome the 69.5 foot fall between Lake Nipissing and Georgian Bay; at these points a total of 35,394 electrical horse power will be made available, this being calculated on the regulated low water development, and takes no account of increased energy possibly by storage dams constructed on the various rivers emptying into Lake Nipissing.

The three locks are so designed as to permit of locking through vessels up to 21 foot draft and 705 feet in length, thus accommodating the largest vessels on the Great Lakes.

Dense fog is not only cause of delay but a menace to the safety of vessels on our Great Lakes. Georgian Bay, however, holds the record for only four days per month, the still clearer atmosphere of Lake Nipissing reducing this minimum to two or three days, at most, per month.

The records show that Lake Nipissing is open to navigation 211 days each season without ice-breakers. Records by the Montreal Harbor Commissioners show that the harbor is open 215 days each season. Navigation on the French River waterway will open earlier and will continue as late as, or even later than that on the

"Sault" Canal. This is due to the control of lake levels through the operation of the dams.

The report of Walter Shanly, C.E., on the entrance to the mouth of the French shows it to be a suitable harbor entrance, and later reports by other eminent engineers confirm this.

The still water reaches created by the three power dams eliminates the dangers to navigation met with in the three to five mile currents prevalent in other navigable river stretches of the Great Lakes systems.

The depth of the waterway will be 22 ft. and the average depths of water at the grain elevators and coal docks of the Great Lakes correspond with this as follows: Buffalo, 21 ft.; Chicago, 21 ft.; Cleveland, 17 ft.; Detroit, 20 ft.; Port McNicol, 23 ft.; Duluth, 22 ft.; Depot Harbor, 21 ft.; Port Arthur, 21 ft.; Fort William, 21 ft.; Port Colborne, 22 ft.

THE ROLL CALL OF THE PARTY

The retail lumbermen who took in the North Bay trip were as follows:

Barrett, E. M., Barrett Bros., Ottawa.
Bennett, Miles, T. H. Hancock, Toronto.
Bissell, H. S., R. Laidlaw Lumber Co., Ltd., Toronto.
Bond, T. G., Batts Limited, 372 Pacific Ave, Toronto.
Bowden, Frank G., Frank A. Bowden & Sons, Ltd., Toronto.
Bryan, F. W., Bryan Mfg. Co., Ltd., Collingwood.
Burton, F. R., Consumers Lumber Co., Ltd., Hamilton.
Clendenan, Geo., Clarksburg.
Coates, Chas. L., A. Coates & Sons, Burlington.
Copeland, A. H. M., R. Laidlaw Lumber Co., Ltd., Toronto.
Cummings, F. J., Kingston Rd. Lbr. Co., Toronto.
Dykes, E. D., Whitby Brick & Clay Products Co., Whitby.
George H., R. Laidlaw Lumber Co., Ltd., Toronto.
Gilchrist, Jas. T., Jas. T. Gilchrist Lumber Co., Toronto.
Gilchrist, Campbell, John C., Gilchrist Lumber Co., Toronto.
Gorvett, W. G., Arthur.
Hadley, S., C. & J. Hadley Lumber Co., Ltd., Chatham.
Harriman, James, Niagara Falls.
Hain, Alex., Watt Milling & Feed Co., Toronto.
Harriman, James, Niagara Falls.
Henderson, A., Cheltenham.
Henderson, J., Cheltenham.
Hillock, J. F., John Hillock & Co., Ltd., Toronto.
Howes, John, Harriston.
Irvin, Chas., Irvin Lumber Co., Toronto.
Irvin, W. C., Irvin Lumber Co., Toronto.
Kent, F., The Seaman, Kent Co., Ltd., Toronto.
Kernohan, Geo. N., Geo. N. Kernohan Lumber Co., Ltd. London.
Laidlaw, R. A., R. Laidlaw Lumber Co., Ltd., Tornoto.
Lawson, Chas. C., Alliance Lumber Co., Ltd., Hamilton.
Lee, R., The Riverdale Lumber Co., Toronto.
Light, Jos., Robert Light, Napanee.
McBride, R. B., J. M. McBride & Sons, St. Catharines.
Macabe, A. M., St. Clair Construction Co., Toronto.
McAfee, R. J., Cookstown, Ont.
McDowell, Harry, R. Laidlaw Lumber Co., Ltd., Toronto.
Mackenzie, J. B., Georgetown.
McKinnon, Alex., Hillsburg, Ont.
McMurray, T. E., Builders Moulding Co., Toronto.
McPherson, G. D., Merlin, Ont.
Mason, Percy, George M. Mason, Ottawa.
Morgan, Jos. E., Frank A. Bowden & Sons, Ltd., Toronto.
Murphy, J. E. Jr., Kingston Rd. Lbr. Co., Toronto.
Mustard, John B., Brucefield.
Paterson, T. A., Mickle, Dyment & Son, Toronto.
Patterson, Thos., Patterson & Crosthwaite, Hamilton.
Reid, J. B., Reid & Co., Toronto.
Rhind, Alex., Simpson Planing Mills Co., Ltd., Toronto.
Richardson, F., Ingersoll.
Richards, Miss Gladys, Ingersoll.
Richards, L. H., R. Laidlaw Lumber Co., Sarnia.
Roper, C. H., John Poag & Co., Hamilton.
Savage, W. E. S., Mimico.
Sinclair, S. M., Nicholson Lumber Co., Burlington.
Smith, Christie, John B. Smith & Sons, Toronto.
Smith, W. J., John B. Smith & Sons, Toronto.
Taylor, Mr. and Mrs., Earle, Taylor & Wells, Paris.
Taylor, Mr. and Mrs. George, Taylor & Wells, Paris.
Tennant, W. B., John B. Smith & Sons, Toronto.
Turner, Percy, St. Clair Construction Co., Toronto.
Watt, Allen, The Watt Milling & Feed Co., Toronto.
Boultbee, Horace, Secretary of the Ontario Retail Lumber Dealers Association, Inc.
Van Blaricom, G. B., Editor "Canada Lumberman," Toronto.

Colonel W. E. Haskill, an American paper manufacturer, complained to a meeting of Southern publishers that the Canadian provinces, with proper regulation and fire protection, can cut three to four million cords of pulpwood annually without seriously impairing their own supplies. Had the American manufacturers conserved their own resources by these methods they would not now be dependent upon Canada for supplies.

Comprehensive view of the varied pulp and paper enterprises of the Spanish River Pulp and Paper Mills at Sturgeon Falls, Ont.

Canadian Sawmills are Splendidly Equipped

Able Review of Methods Employed on the American Continent as Contrasted with Operations in Great Britain and India

By F. A. Leete, Imperial Forest Service, India

The contrast between American and Indian mills is so very marked that the writer takes up the subject with some reluctance, because statements must be made that are bound to be controversial and unpalatable. There is no getting away from the fact that, measured either by British or by Western standards, Indian practice is very much behind the times.

The term "Indian" is here used in its broad sense as referring to the Indian Empire as a whole. It is only right to mention that there are differences between the various provinces. Owing to the fact that the last twelve years of the writer's service have been spent in Burma, he is better acquainted with conditions there than he is with those prevailing in other provinces. In respect to Burma itself there is no hesitation whatever in stating that sawmills machinery is very out-of-date and inefficient in comparison with the best modern practice in other parts of the world.

A striking example can readily be given. Bandsaws held the field absolutely in North America for log sawing, and they are rapidly coming to the front in Great Britain. In Burma there are believed to be none at all. Other provinces are more advanced, for one British firm alone has supplied no less than twenty-five horizontal bandmills to railway companies and to others.

Most of the sawmill machinery in India has come from home and it is only natural that this should have been the case originally. But it is rather curious to note that, by continuing to get their supplies from the source—after the industry has assumed large dimensions—lumbermen in India have shown far too little desire to follow the lead of big lumber producing countries in other parts of the world.

The inference that may be drawn from the preceding remark, that British sawmill practice is totally different to Canadian and American practice, is fully justified by fact. As the title of this book implies, the greater part of it is taken up with a description of Western practice. At the end of this chapter on sawmills some notes on British practice are given. But it should be clearly understood that they are only fragmentary. The writer did not have time to study the matter in detail, and to describe it fully would require a good sized volume.

Quite recently, when I expressed surprise at finding Western mill machinery so little used in England, an explanation was given to me which seems quite reasonable. It was as follows: American mills work faster than English ones and so they would be apt to dislocate business, for the supply of raw material (logs) would probably run out. By being compelled to stand idle for longer periods the mills would simply waste the time they saved.

Can such an argument be seriously advanced with regard to India? Certainly not. With forests of such great extent that they are comparable in size to those in the Western Hemisphere, India need not be handicapped by fear of exhaustion of supplies.

Labor is Very Cheap in India

It is very probable that the marked difference in labor conditions accounts for a great deal of the slowness in introducing improved methods and machinery into India. In America labor has always been so expensive that there has been every inducement for the exercise of ingenuity in inventing labor-saving devices. On the other hand in India labor is so cheap and plentiful that mechanical devices for reducing the amount of it have stood no chance of finding favor unless they are themselves inexpensive to instal. After living in this kind of atmosphere for many years it becomes fatally easy to assume that the equipment to which one is accustomed is not only good enough for the purpose but that any great outlay on machinery of a different kind would be a waste of money.

A simple illustration may be given to show that it is not likely to be waste of time to study American milling methods. When the last census was taken the number of men employed in the timber industry in Rangoon was about 20,000. In reply to enquiries as to how many men would be required to do the same amount of work in America the writer was more than once told that 2,000 would suffice. The average daily wage in Rangoon was fully one rupee before the war, and in America not more than six or seven rupees. Moveover, it is hard to believe that American machinery would cost as much as a Rangoon plant of the same total capacity and it would certainly take up less than half the same amount of room.

Another point may be mentioned. The mechanical devices in Western mills are primarily intended to reduce the amount of labor, but the full benefit cannot be reaped from them unless the men employed in the mill work well. There is no room for dilatoriness or "taking things easy." The lag carriage must travel fast; and as soon as one log is finished, another must be ready for it. It is the same throughout the mill.

Ordinary Mill Work is Mechanical

The writer is of opinion that the above consideration need not be an effective bar to the use of Western machinery in sawmills in India. As explained later one or two men requiring special qualifications are necessary, such as the filer and log sawyer, but for the most part the work is mechanical and does not call for any violent exercise of the muscles. The greater part of the work in mills and lumber camps in the Southern States is done by colored labor, and with good supervision, there is no reason why Indians and Burmans should not prove equally satisfactory. Shorter hours are probably indicated and if necessary, half-day shifts (i.e., doubling the labor) could be resorted to. Even so, for the same output the total bill for labor would be far below its present figure.

In concluding these introductory remarks the writer desires it to be understood that they are chiefly based on the mills he is acquainted with in Burma. Only in so far as mills in India proper are radically different are any qualifications to the remarks made in this chapter called for.

It is proposed to discuss the subject of sawmills under the following headings:—

(1) Description of North American sawmills and comparison with Indian mills.
- (1) General Design.
- (2) Double storey plan.
- (3) Storage of logs.
- (4) Entrance of logs into mill.
- (5) Log Carriage.
- (6) Filing Room.
- (7) Band and Circular Saws.
- (8) Single and Double Edgers.
- (9) Trimmers.
- (10) Re-saws (including Frame Saws)
- (11) Live Rolls and Conveyors.
- (12) Engine Room and Belting.
- (13) Electric Drive.
- (14) Water Power.
- (15) Special Mills (Portable, etc.).

2. Summary of suggestions for mills in India.
3. Notes on the history of sawmill practice.
4. Notes on British sawmill practice.

The General Design of Mills

Before going into details as to the design and equipment of Western sawmills, it will be as well to make a few general remarks. It is a comparatively simple matter to give a general idea of the mills because they are all so very much alike. To anyone whose knowledge of sawmill practice is confined to Europe it may come as a surprise to be told that there is only one type of lumber sawmill throughout the length and breadth of North American continent. There is nothing comparable to the diversity of design of mills and of the machinery in them which is such a conspicuous feature in England. All mills of any size and all permanent in character have such a strong family likeness that a careful study of one modern mill would enable anyone to form a good idea of practice in general. It is true that there are differences in detail between hardwood and softwood mills, but these differences are only in the outside arrangements for getting the logs into the mills. Inside the mill itself the sawing arrangements are just the same in both cases.

Once having satisfied himself of the correctness of the above statements, an observer must at once realize how strongly this simplicity of design speaks in favor of Western practice. Taking into account the fact that milling in North America is carried out under such a wide range of different conditions, both as to climate, scale of operations and nature of the timber dealt with, there must be something superlatively good about modern mill design for it to be so remarkably uniform, and simple in character, in spite of the

keenness of the competition of the large number of manufacturers of machinery supported by the industry. The keynote everywhere is large output per machine and the free use of mechanical devices for saving labor.

Bringing the Logs into Mill

A conspicuous feature of a mill for softwoods is the „mill pond" into which the logs are discharged from the logging railways or other source of supply. For a mill dealing with hardwoods which will not float the pond is replaced by skidways, on to which the logs are rolled from the railway cars, or placed by an overhead derrick.

The mill itself has at least two floors, and generally a third one. All the driving mechanism, shafting, etc., is on the ground floor, so that the first or main floor is left entirely free for the operation of the machines. As the majority of the mills in America are band-mills, it is usual to find a third floor above the main floor to accommodate the filing room. The latter only occupies part of the floor space of the mill and so it is customary to have in extension of it a raised platform running the whole length of the building, from which an excellent view can be obtained of all the operations in the mill. In circular sawmills the filing room is generally placed on the main floor.

To bring logs into the mill they have to be pulled up an incline. In hardwood mills this incline often takes the form of a tramway up which loaded cars are hauled through by means of an endless shain provided with dogs or spikes. All that the attendent at the lower end of the trough has to do is to pole the logs forward until they are firmly gripped by the dogs.

Inside the mill, alongside the trough or tramway as the case may be, is a sloping platform known as the "log deck" leading down towards the "log saw carriage."

The Log Kicker and Nigger

To bring the logs from the trough on to the deck a contrivance known as the "log kicker" is used. The operator by pulling a lever causes two steel arms, worked by steam power to shoot forward and push the log bodily out of the trough. It then rolls down the deck until held up by two quadrant shaped projections ("loader"). When the sawyer is ready to cut up another log he pulls a lever which causes the quadrant to drop, thereby allowing the log to roll onto the carriage.

Every one in India knows how painfully slow a business it is to turn a heavy or crooked log round on the log table, to get it into the desired position for successive cuts. It is true that in Western sawmills very small logs are often turned round by hand, but the universal practice for logs of any size in permanent mills is to make use of a mechanical contrivance known as the nigger, a steel arm rising from the floor and operated by steam.

A detailed description is given later on of the log saw carriage. Here it may suffice to mention that it is a much more elaborate piece of mechanism than the plain travelling steel table to be met with in British and Indian sawmills. It is provided with automatic dogs for holding the logs firmly in any desired position, and these dogs can be instantaneously applied or released. The moving of the log forward for successive cuts is not done by hand levers but by means of mechanism known as the setworks. For the proper placing of tapered logs special levers are provided.

Mobility of Log Carriage

One of the remarkable things about the log carriage is its extreme mobility. The mechanism provided for the purpose is wonderfully elastic in operation, and I believe that it is far superior to the general run of practice at home and in India. Full descriptive notes are therefore given and I am optimistic enough to think that careful perusal of these notes, and of the illustrated catalogues of standard makers of machinery, will initself be sufficient to lead the generality of millowners in India to feel desirous of overhauling their plants. The matter has a very important bearing on mill outturn. British mechanism for driving the carriage is positive, i.e., the speed cannot, as a rule, be varied without stopping, or at least checking, the motion of the carriage. The result is, therefore, that the speed of the carriage is as a rule much slower than it need be, as it is turned down to the slow speed necessary for occasional big logs. In North America, on the other hand, the sawyer has absolute control, and by means of a single lever he can instantaneously change the speed from the slow rate required with a large or refractory log to the racing speed at which the carriage is driven backward. Knowing how elastic steam is it should appeal very powerfully to an engineer to be told that the favorite form of feed in better class mills is by direct steam, namely, either gun shot or twin engine and rope.

Although the log carriage undoubtedly deserves its place in popular estimation as the most important machine in the mill it is also true that in respect of the other machines and mechanical arrangements for handling timber the difference between British and Western practice is very striking. No two British mills are alike in the way baulks, planks and slabs are dealt with after leaving the log saw; the machine is called upon to complete the conversion.

Edging and Trimming Operations

On the other hand the standardizing of machine design as applied to Western sawmills is largely due to the universal recognition of two distinct stages after the rough lumber leaves the log saw, viz.:—

1. Squaring the long sides (edging)
2. Squaring the ends (trimming)

Special machines have been evolved which are simple in design and yet so wonderfully efficient that their operation is extremely fascinating to watch, and their superiority to British machines for the same purpose cannot but be freely admitted.

The first of these two operations is performed on a machine known as the double edger, as it trims both long sides simultaneously. It consists of two or more circular saws mounted on a common shaft in such a way that the distance between the saws can be varied at will. The necessary adjustment is practically instantaneous. The rough planks to be edged are placed in position by hand and are carried forward by feed rolls.

The method of performing the second operation, or trimming of the ends of planks, depends on the size of the mill. In large mills the trimming saws are mounted in gangs or rows at a fixed distance apart, generally about a foot. The individual saws can be raised or lowered independently of each other. A single operator controls the machine and by pulling levers, or by pressing keys as the case may be, he can bring any two desired saws into position to trim off the end of any piece of wood passed endwise below them.

The Steady Supply of Material

The log carriage, double edger and trimmer would not in themselves be sufficient to account for the efficiency of Western sawmills. They are capable of doing so much work simply because of the excellence of the arrangements for moving the timber from machine in its passage through the mill. There is no carrying of wood about by hand, or piling on tramway trucks, as in British and in Indian mills. Such a practice would inevitably lead to congestion and reduce the output. In Western mills as soon as each plank or slab is cut, it automatically moves forward to the next machine, either on rolls or on chain conveyors. Each machine, therefore, has a steady supply of material to operate upon, and correct design for a mill is simply a matter of having the three types of machines of the right size each other of the desired class of sawing.

Lastly, in this general description it may be noted that live rolls and chain conveyors are not only freely used for passing the wood from machine to machine and finally out of the mill altogether, but conveyors are also used for slabs, refuse pieces and saw-dust. There is no removal of refuse and saw-dust by headloads in baskets. Whatever is required for the furnace goes direct to it in the conveyors and the balance passes out to and is burnt in an incinerator.

Endless Variations in Detail

Although all mills resemble each other in having log deck, log carriage, edger, trimmer and conveyors, there are endless variations in details. In very small and temporary mills the steam kicker, loader, nigger and live rolls may be dispensed with and a single pendulum cross-cut saw may have to do all the trimming. In very large mills there may be as many as four log saws and carriages. In many mills bandsaws are supreme, but some operators still cling to big circular saws. For the sawing of planks band or circular re-saws are installed in some mills, in others, vertical frame or gang saws are preferred. Some operators burn all the slabs and small stuff; others cut it into laths, shingles, box shooks, etc.; in fact there is no hard and fast line of division between lumber sawing now under discussion and manufacturing processes dealt with in a separate chapter.

In the United States of America there are something like 50,000 lumber and manufacturing plants, ranging in size from the smallest of portable mills to the biggest of permanent ones. There are a large number of manufacturers of sawmill machinery and they are always on the look out for something original, for some improvement to patent. It can, therefore, be readily understood that there are a bewildering number of different designs to choose from.

All that I propose to do is to describe the general features of each type. The principal makers publish profusely illustrated catalogues which may well be carefully studied by anyone interested in the subject. I am indebted to manufacturers for many illustrations, as very few good photographs of the interior of mills were taken in my tour of the plants in Great Britain, Canada and the United States.

It might at first be thought that the vibration from heavy machines raised off the ground would be excessive. This is not the case even where the main floor is supported wholly on wood posts.

Brick or masonry walls are indeed exceptional. In the majority of mills the only brickwork or concrete is in the foundations of the posts and for the boiler and engine.

The advantages of the two-storey plan are obvious. Not at all unimportant are the facilities afforded for getting rid of sawdust and refuse by means of chain conveyors working in troughs.

The term "portable mill" is rather elastic. It is usually applied to any mill which is so small that it can easily be moved about, irrespective of the length of time it may be required at any one place. From lack of attention to the latter point is is commonly supposed that any kind of temporary or make-shift arrangements are good enough for such mills. This is a mistake. A mill may be a small one, but if it is to stay in one place for a long time it may as well be set up to the best advantage, especially as it can supply the necessary timber itself and very little additional expense on iron work is required. For the above reason, I would suggest that the double storey plan be adopted in India for any mills which may be expected to remain in one place for six months or more.

Further comment on the lumbering and woodworking industries in the United States and Canada, together with notes on British practice and suggestions for India, based on a tour of North America made by Mr. Leete, who is in the Imperial Forest Service in India, will appear in later issues of the "Canada Lumberman." The reviews by Mr. Leete are edifying and interesting, and written in a very readable style.

Coating that Prevents End Checking

Wood, whether in the form of logs, lumber, timber, shaped blanks, or veneer, will split and check at the ends during seasoning, if drying is allowed to go on at a natural rate through the end grain. To retard the rate of drying from the ends, it is necessary to cover them with some protective coating.

The law of end coatings, in simple terms, is that the harder and greener the wood, the more effective must be the coating. In its experiments to determine the practicability of various coatings and end dips, the Forest Products Laboratory found the following to be true:

Paint is convenient to handle, but is of low effectiveness.

White lead is convenient to handle, and is of medium effectiveness.

Lorac, a commercial compound, is convenient to handle, and is of considerable effectiveness.

Rosin-lampblack is inconvenient to handle, but of high effectiveness.

Rosin-lampblack is made according to the following formula: Clear grade rosin, 60 parts by weight; lampblack, 1 part by weight.

The rosin should be melted, but not allowed to boil or froth. The lampblack should then be thoroughly stirred in. The ends of the sticks should be dipped in this molten mixture to a distance of about ½ in. When hard, the coating should be smooth, free from bubbles, shiny, and an eighth of an inch thick over the end.

If the stock is to be subjected to rough handling which might cause the coating to chip when cool, linseed oil may be added, in the proportion of 1 to 15 by weight, but this will have a tendency to make the coating excessively soft in the kiln at temperatures above 103 deg. F.

General Conditions in Lumber Line

In the last issue the "Labor Gazette" of Ottawa gives the following interesting comment on the lumber industry in Canada from coast to coast: The lumber mills at Charlottetown slowed down during the month, the bulk of the lumber having been sawn during early spring. Large quantities of logs were brought down St. John river for the various mills at Indiantown and Milford, and the saw and shingle mills in St. John district were all busy. At Fredericton the sawmills and rafting booms gave employment to large numbers of men. River driving at Bathurst was disappointing owing to low water level. Quebec reported river driving nearly over in that district, conditions having been fair; outside sawmills all started their season's cut. The saw and shingle mills at Sherbrooke were busy, and the logging camps were cutting and peeling pulpwood. The sawmills at Ottawa and Hull continued busy. The lumber mills at Pembroke ran full time; extra gangs were required for river driving owing to low water. River drivers were still very busy in Peterborough district, large quantities of logs being supplied to the sawmills which were running to capacity; shingle and lath mills were also very active. At Sault Ste. Marie lumber yards and planing mills had a busy month and bushmen were in demand. Edmonton reported a scarcity of help in the lumber camps of northern Alberta. Vancouver reported lumbering in the coast district rather less active than in the past few months, a few camps closing down temporarily; saw and shingle mills were fairly busy. At New Westminster the saw and shingle mills had a busy month. Experienced loggers were in demand in Prince Rupert district. Nanaimo and Victoria reported activity in all branches of the lumbering industry on Vancouver Island, with a shortage of shipping facilities for export.

Do Not Buy Beyond Requirements

In a letter to the trade under recent date, Julius Seidel, of the Julius Seidel Lumber Co., St. Louis, says:

"For some time I have been receiving personal requests from customers for an expression in regard to conditions of the lumber market, asking also for an opinion relative to buying.

"I have always considered it unwise for a retail yard to buy beyond actual requirements. In these times, and especially now, stocks can be reinstated very quickly from wholesale yards, in large concentrative centres, that carry the assortment. As a consequence the retailer need not invest in certain articles until he makes an actual sale and can also reduce stable items to a minimum. In short, 'tis better to buy what you need when you need it, at the market value on the date of shipment. There are so many species of woods, grades and sizes seeking a market, that it's simply impossible for a retailer to maintain a complete stock at all, get his turn over and make money on his investment.

"What our country needs at present is stabilization and nothing will so help to build up our finances as the reducing of stocks. It is our duty to help conditions. Cheerful statements are made that prices will come back to war-time levels. Personally, I doubt it. I do believe, however, that prices will gradually adjust themselves to supply and demand. The demand will be for the peace time wants of our countdy.

"Every community, without a doubt, needs buildings and needs them badly, but potent factors are delaying matters and we might as well adjust ourselves to actual conditions as they are for the time being."

The Building Situation in England

The British Government subsidy of 250 pounds or $1250 per house, can be secured also for temporary wooden structures, provided they cover not less than 700 square feet, reports the U. S. Consul at London, as quoted by the Bureau of Foreign and Domestic Commerce. For the housing schemes, much English timber is being used, except for joinery purposes. Housing schemes in Great Britain are not yet sufficiently advanced for heavy quantities to be required in construction, although orders are plentiful for manufactured wood.

The market for American lumber shows little improvement. It is not so much a question of price as of lack of demand. Every month shows an increased quantity of mining timber coming to the United Kingdom from France, while there have lately been increased deliveries of home-grown mining timber.

Not a little of the present depression is said to be due to the uncertainty prevailing as to the future of transportation. The probable increase in British freight rates makes the future grading of prices of such a commodity as lumber very problematical and difficult, and merchants in general are suspending purchasing for forward delivery.. The general opinion throughout the timber trade, however, is that a period of slow recovery and increased prosperity will follow almost immediately on the present stagnation.

It was stated in Parliament in the early summer by the Minister of Health that the number of disputes in the building trade had delayed construction of houses. Present rates of wages, he said, varied in different districts from the equivalent of 30 cents to 57 cents per hour, the corresponding range in 1914 being 14 to 23 cents per hour.

Another Sawmill Wiped Out by Fire

The sawmill of Moose Lake Lumber Co., in Firstbrook Township, west of Cobalt, was recently destroyed by fire. The mill was sawing about 20,000 ft. per day and had only half of the season's cut completed. The company have upwards of 20,000 logs in the waters of Moose Lake, and announce that it is their intention to rebuild as soon as matters are adjusted. The sawmill was partly covered by insurance. The flames broke out in the plant after the day's work was completed and the cause of the blaze is unknown. The Moose Lake Lumber Co. are both wholesalers and retail dealers in lumber and timber. Their yards and office are at Cobalt, and their limits and mills in Firstbrook Townhsip. Chas. J. Price is the president of the company, John Ough, vice-president, and A. W. Harrington, secretary-treasurer.

Living Up to Contracts in Lumber Business

Membership in Association Should Mean Something of Guarantee of Business Character—Trade Ethics Which Should be Rigidly Observed

It is generally admitted there have been a good many changes in the lumber business that are of a progressive character, and I've heard it intimated that the personnel is of a little bit higher grade than it used to be. The men now engaged in it probably have a better school education and a better knowledge of how to do business according to correct principles. They know more about the commodities they handle and how they should be used and are better acquainted with the art of merchandising. You might say that as a whole they are more proficient business men than those of the rank and file in the industry thirty or forty years ago, says C. H. Ketridge, of Evanston, Ill., in the "Mississippi Valley Lumberman."

However this may be, there is one thing equally true, that notwithstanding all which has come about in the way of progress, there are still some practices followed that remain as unchanged as the human nature which prompts their action. All the veneer of a higher business culture that is admitted does not hide the same mean and dishonest character of these practices and I don't suppose it ever will be changed, for the same disposition and spirit to do these things is common in mankind in general.

One of these practices relates to business contracts. It is naturally supposed that the higher the grade of the men entering into them, the more scrupulous and conscientiously will the obligation be executed. There is hardly anything that puts the real character of a man to the test as that of fulfilling a contract that has gone against him since he made it. His sense of justice tells him it should be lived up to regardless of changed conditions affecting it. Every normal, intelligent man knows this, and a selfish reason for breaking a contract is no valid excuse for doing it. Many a man in the lumber business has had his moral strength put to the test in this way. Hardly a retailer but who has been tempted to dodge meeting the terms of a contract he has made with the seller of a carload of stock, and the man at the mill has had his moral calibre tried in the same manner when weighing his interests against those of his retail customer. The same human nature controlled them both.

Anything Was Thought Fair

In the old primitive days of doing business, it was generally considered that anything was fair in trading and, to some extent, this is still followed by a certain class of business men, though not so large as formerly, at least, in the lumber business. I can remember the time, however, when the average retailer had an easy conscience in his dealings with the shippers. He thought little of taking advantage of a wholesaler in a settlement. Such a thing as business ethics as we now know them to be had not been formulated in those days. I have known dealers who told me it was their policy to make their "kicks" on stock shipmentt pay the expense of unloading and piling in the yard, and these were men, too, who were regarded in the communities as fair dealing people. To "beat" the shipper, however, was regarded as part of the business game. Or, in other words, they didn't know any better, because old time custom had blinded their realizing there was a moral element in business dealings, which, in these later years, the business world has come to recognize and understand the value of, although there is still a good deal of room for its being improved in practice.

I confess to being somewhat surprised at the prevalence for a year past, of the complaints arising from dealers cancelling their orders and mill men failing to ship orders because of a raise in the market price. I have no means of knowing how extensive these practices prevail, but judging from what I have heard about, there must be a good deal more under the surface of this matter than is known. I would not have attached much importance to it in the years I've been speaking about, because, as I remarked, it was considered, a part of the game, but as we like to "point with pride" to the high class character of the man now engaged in the business, it certainly seems they are not living up to the standard claimed. The very nature of these cases precludes them from becoming generally known. Both parties would "hate like the dickens" to have publicity in the trade as to the individuals doing these things, provided it is the other fellow that is exposed. It would tickle the retailer to have the trade know that a certain manufacturer had held up shipping his order placed several months before because of a rising market. He wants everybody to know how that concern had treated him. But on the other hand, wouldn't he squirm though if another mill man published to the trade the fact of his cancelling his order because of a falling market? But, as Kipling or some other fellow said, "That is a horse of another color."

Now, the very fact of these two parties not wanting to have their own particular actions known outside, is the very best evidence that acts of this kind are to be numbered among the "things that are dark and tricks that are vain." Furthermore, neither one of them would care to tell his personal friends that he had cancelled his contract for a car of stock because the market had gone down and he could buy it cheaper eleswhere. Nor would the other care to let his neighbors know that he was making more money selling at the market advances, and letting his old orders wait till it was more profitable to ship them.

Proof That It Is Wrong

This inclination to want to keep it to themselves is good proof that they know it is not the right thing to do, and would be ashamed to have it known they had gone back on a business contract, for, an accepted order to buy or sell a carload of lumber is a "sure enough" contract, and both parties know very well in their own minds that it is. Attempting to discard the obligation is wrong, no matter what may be said to explain it away. It is something that might be expected in dealing with young boys, or men with boys' minds, but it is not a he-man's way of doing and no amount of plausible excuses will justify a thing of this character in business relations. Becouse of its being done by others is no reason why you or I should do it. I really think the sticking by a contract is an important part of a business man's credit, and should be regarded so, and I cannot see why it should not be included in his credit rating and made known to the trade accordingly in the same manner as his financial rating is recorded. Those dealers who cancel orders on a falling market should be reported in a way that the shippers would know the character of those in this respect with whom they are dealing, and likewise the retailers should be afforded the information as to those manufacturers and wholesalers who take advantage of a rising market to withhold shipping orders accepted by them at previously lower prices, and give preference to those of more recent acceptance.

I know this is a difficult question to deal with, and I am not prepared to say how it should be done. I do believe, however, that publicity of some kind would be more effectual in restraining such practices than anything else. The boards of trade and stock exchanges are rigid in their requirements of members to keep their obligations, and do not hesitate at discipling or expelling those who are discovered being guilty of unbusiness-like practices. If these bodies of business men can do this to maintain their ethical standing, is there any good reason why the associations in the lumber industry should not develop a system whereby unethical practices in the trade should be restrained? From my knowledge of lumbermen in general, I am of the opinion that only a small percentage of them are violators of their shipping contracts, but as a few rotten apples in a barrel affect the whole lot, so do the few guilty of unethical practices throw discredit on the branch of the trade to which they belong.

Should Be A Badge of Honor

The time is coming when to be a member of an association of retail lumbermen will be something of a guarantee of his business character, not only to members of the producing and wholesale branches of the industry, but to the consuming public as well. Instead of being afraid, as the country dealer now is of having his community know he belongs to the association, he will consider it worth while to have it printed on his letter heads and otherwise make it known in his advertising. Before this comes to pass, however, the retail lumbermen will have educated the public into knowing what the association really is and what it stands for in its high ideals of business integrity and of service to the community. And when people come to know this, an association membership will be as a trade mark insuring them intelligent service and fair dealing, and a certificate of his business character.

You may think we have a long way to travel before we arrive at this state of mind, but the way we are progressing now in our associations, and the awakening to the value of ethics in business, it is not so far over the horizon of the future as we may think. The old theory that business and religion did not mix well together, is becoming regarded as a thing of the past in the light of an under-

standing that business ethics and service is exemplifying Christianity. This is so regarded now by the more progressive men in the churches who have gotten away from the old idea of Christians coming out from the world and being separate from it, for be it known that the Code of Trade Ethics as worked out and adopted by the American Lumber Trades' Congress is nothing more nor less than the Golden Rule being applied to business relations.

Of late years this immortal code has not been in the limelight of publicity in connection with the lumber industry that established it. Neither have the Ten Commandments in the morality of the present day. Nevertheless both remain and endure as the standards of right living and business relations. One of our trade journals recently published in full the Constitution of the United States: a document so full of vital significance to every citizen of the country, and yet so very little known as being the basic guarantee of our civil rights and liberty. To the great mass of the American people of to-day, it is an obsolete document and is only heard of in courts of law.

I think it time we should revive the attention and interest of lumbermen in our established Code of Trade Ethics. There are many hundreds in the trade to-day who scarcely know of its existence, and many have never heard of it at all. I suggest that it be again published in all of the trade journals, and that they keep reviving it from time to time. The associations also should take the matter up and do their part in letting their members know of its existence and that it still remains as morally binding on them and every man who has a part in the lumber industry. If it were better known, studied and lived up to, there would be less cause for complaint in cancellation and side-stepping in the matter of contracts between buyer and shipper.

Another Offense of Long Standing

There is another old subject that seems destined to always be a matter of dispute between the shipper and retailer, and that is, the practice of ignoring the terms of sale and taking the discount after the specified time has passed. I have heard this subject discussed many times at the retailers' conventions, and the general opinion, as expressed at these times, was that the dealer had the right to inspect the shipment before paying for it. I was present also at the meetings where manufacturers, wholesalers and retailers were assembled for the purpose of discussing and threshing out all these differences in trade relations between the several branches of the industry, resulting in the formulation and adoption of the Code of Trade Ethics which was supposed to be morally binding on the trade in future transactions. This particular subject occasioned a great deal of discussion and argument, and took up much time before a unanimous agreement was reached. As finally passed upon at the last meeting of the Congress at St. Louis, May 22-23, 1911, the Sixth Section of the Code reads as follows:

"The terms of sale as noted on original order or acceptance of same should be considered as much a part of the contract as the price at which the stock is purchased. Should any shipment upon which cash has been advanced or discount has been taken, on arrival at destination not be acceptable for legitimate reasons to buyers, or satisfactory adjustment cannot be made as to the acceptance of the stock, buyer should have the right to demand return of such money as he has paid, before allowing the shipment to be moved or disposed of elsewhere."

The seventh section also is of particular interest in these days of uncertain transportation. It reads:

"The seller should not be held responsible for delays incident to transportation beyond his control, unless otherwise specifically agreed."

Approved by the Whole Trade

Now, for the information of the younger men and others who have engaged in the trade since the adoption of this code, I want to say that these meetings which extended over a period of three years, were composed of representatives of more than eleven thousand different firms and nearly forty retailers, wholesalers and manufacturers associations. So, you see, the greater part of the whole lumber industry was represented, and not merely a few individuals for themselves. Furthermore, the code as finally amended and adopted at the last meeting, was practically unanimously adopted by all the associations in the country at their subsequent conventions. It is assumed, therefore, that this voluntary action expressed the faith and promise of the individual members of the different branches of the trade to abide by and follow the provisions of the Code in their business dealings with each other, and it seems to me that in all cases of dispute covered by these provisions, a mutual disposition to regard them as binding should bring about an amicable settlement. Studying these sections I have quoted, any fair-minded man can see they are based on a principle that is fair and just to both seller and buyer, as is also every other section of the code. I know that in the discussions referred to, one of the prime considerations that governed the whole work was that nothing should be adopted but what was practicable in every case and under all conditions. For the spirit of the Golden Rule runs through it all.

In this matter of taking the discount contrary to the terms of sale, I believe the shipper is largely to blame, for it is obvious that if he will not sanction or permit it in a settlement, the buyer cannot do otherwise than abide by his contract. The shipper has it all in his own hands, and if he allows a customer to take the advantage of him, he has no reasonable cause to complain of the practice. I know very well the argument of the dealer pertaining to this matter, but just let him consider that if the shipper is willing to trust him with a car of lumber before getting his pay for it, is it not fair to suppose that he in turn should have confidence in the shipper by paying for the goods within the discount period named in his contract, in advance of receiving them?

In my own experience, I tried to live up to these contracts, and I made it a rule not to have anything to do with a wholesaler or manufacturer that I could not trust to settle fairly a just complaint of mine relating to a shipment either before or after paying for it.

Is Metric System Possible in Lumber Line?

Its Introduction Would Mean Changing Thicknesses and Lengths and Scrapping Present Sawmill Equipment—Other Difficulties

The metric system has recently received considerable attention in lumber and other circles and its exponents are busy urging its adoption by various bodies, public and private. At a recent monthly meeting of the Wholesale Lumber Dealers' Association in Toronto an interesting address was delivered on the system, its convenience, simplicity and advantages. The prediction was made that the prospects were bright in time for the metric plan to prevail in lumber operations.

The question has been reviewed from many angles and a correspondent recently wrote an American trade journal as follows:—

It is not going to be any more trouble for us to measure a board or a piece of steel with a rule that is marked in tenths, than it is to use one in inches, and it is going to be a good deal easier to make calculations.

We older people, as we get far away from our school days, forget the trouble that we had with fractions, and with tables of weights and measures, that we had to commit to memory. A prominent college president says that it would save about two years of a child's life if we were to drop this old system of measurement and adopt the metric system.

There is certainly one thing that foreign nations excel us in. They do not all of them have their monetary system arranged that way, as witness the British, pence, shillings, etc., but they all use the same measurements. No doubt the British think that our cents, dimes and dollars is the best money system, but they cannot get enough people to agree on it to carry it by vote. But there must have been a time, not so far back, when they combined and took over the decimal system for measurement and they have become thoroughly shaken down to it and are fully satisfied with it. You could not prevail on one of them to go back to the pounds, etc., that we work under.

There would not be any more "quarter of a pound, eighth of an inch," etc.; it would be all in tenths. Cannot you conceive the improvements in calculations? Did your little girl or boy come to you and ask you how to multiply one fraction by another, and didn't you try to reduce them to decimals or some common divisor first?

The world do move, and I hope it is going to move the metric system into the United States. There are new generations coming along all the time, and if it may be hard for us older ones to adapt ourselves to the new system, although I deny this, yet once adopted it stands for all time.

In his reply the editor ably answers the correspondent in the following manner:—We will agree that our present system of weights and measures is cumbersome and that had we started out with a

decimal system in these matters as well as in money, calculations would be easier. Decimals are easier than fractions.

But there is no foreign country of importance where there is a single system in these things, even where the metric system has been made "official." Even where it was adopted many years ago, it has not become the sole system in use, and there is so much confusion that the supposed change has not become effective.

There are other difficulties in the way. The metric system uses the meter as the unit of measure, and the meter is a little more than thirty-nine inches. Fractions or multiples of the meter are expressed by the use of prefixes. Fractions of a meter make use of Greek prefixes, and multiples of a meter make use of Latin prefixes. A decameter is ten meters; but change the "a" to an "i" and it becomes decimeter, which is one-tenth of a meter. There would be danger of mixing these two.

Applying it to the lumber business, it would be rather difficult to change all thicknesses and lengths of the various items, and if we did, how would we express them. Inch lumber would have no measure name. The nearest we could come to it would be to call it a quarter of a decimeter, or twenty-five centimeters, and that would not be exact. The former would break the rule by using the quarter fraction, and either would be too cumbersome.

The adoption of the metric system, if we were consistent, would mean that every machine used in the manufacture of every commodity bought and sold by weight or lineal measure would have to be changed. Every acre of farm land and every piece of city property would have to be re-measured. Every deed to real property would have to be re-written. Past records running back through the entire history of the country would be meaningless.

New Brunswick Raises Timber Rates

Announcement of new stumpage regulations for Crown lands of the Province of New Brunswick has been issued. The rate has been increased to $5 per thousand feet with increases in other minor particulars. This is the third advance in stumpage since 1917 and the rate at that time was $1.50. Since then it has jumped to $2.50, $3.50 and now to $5. The following is a list of the rates for the ensuing year, compared with those in force last season:

Spruce pine and hacmatac saw logs, per M, superficial feet—1920-21, $5; 1919-20, $3.50.

Hardwood timber, up to an average of fourteen inches square, per ton—1920-21, $1.50; 1919-20, $1.10.

Hardwood timber, about fourteen inches, additional per inch per ton, 1920-21, ten cents; 1919-20, ten cents.

Hardwood logs per M. superficial feet—1920-21, $1.25; 1919-20, $1.25.

Pine timber, up to fourteen inches square, per ton—1920-.1, $3; 1919-20, $2.

Pine timber, additional per inch per ton—1920-21, fifty cents; 1919-20, fifty cents.

Hacmatac timber, per ton—1920-21, $1; 1919-20, $1.

Spruce timber per ton—1920-21, $2; 1919-20, $1.50.

Cedar logs per M.—1920-21, $5; 1919-20, $3.50.

Railway ties, eight feet length, each—1920-21, seventeen cents; 1919-20, twelve cents.

Hemlock logs per M. superficial feet, including bark—1920-21, $4.50; 1919-20, $5.

White birch, for spool wood, per cord—1920-21, $1; 1919-20, 65c.

White birch logs, for spool wood, per M. superficial feet, 1920-21, $2; 1919-20, $1.25.

Fir logs, per M. superficial feet—1920-21, $4.50; 1919-20, $3.

Poplar logs, per M. superficial feet—1920-21, $4.50; 1919-20, $3.

The penalty has been increased from $7.50 to $10 per thousand feet on lumber left in the woods contrary to regulations and on logs seized for cutting beyond licensed limits or on unlicensed land. Railway ties must pay twenty five cents each as penalty if cut beyond licensed limits or on unlicensed land or if the mark for the ties has not been furnished to the department. An increase from $7.50 to $10 per thousand has been made in the penalty on spruce or pine used as skids when other varieties of timber are available.

Lumbermen Candidates in Nova Scotia Elections

Hon. R. M. MacGregor, who is a member of the Murray Government, was returned in the recent provincial elections in Nova Scotia. He ran in Pictou County and won a victory over a Labor candidate. The many friends of Mr. MacGregar will be glad to learn of his return at the polls as he is a live legislator and had occupied a seat in Assembly for the past sixteen years, being first chosen in 1904 and re-elected at the general contests in 1916, 1911 and 1916. Mr. MacGregor was appointed a member of the Executive Council of Nova Scotia without portfolio in June, 1911. He resides in New Glasgow and has long been a prominent business man in that town, being a member of J. D. & P. A. MacGregor, lumber merchants. He is a son of the late James D. MacGregor, who was at one time Lieut.-Governor of the province. He was educated at New Glasgow high school and Dalhousie College, Halifax, where he graduated in Arts in 1896.

Rufus S. Carter, who was defeated in Cumberland in the recent election in Nova Scotia, is a lumberman. He was first returned at the polls in 1911 and was re-elected in 1916. He also served in the Municipal Council for two years and was a commissioner for the Maritime Winter Fair for three years. Mr. Carter resides at Maccan, Cumberland County. He has always taken a deep interest in military matters and retired some years ago from the 93rd Regiment with the rank of captain. He was a member of the Canadian Bisley Rifle team in 1897 and was present at the late Queen Victoria Diamond Jubilee. Mr. Carter's family claim to descend through a direct line from the Earl of Derwentwater and he is of English extraction. He was born at Maccan in 1866.

Hon. Fulton J. Logan, who is a member of the Legislative Council of Nova Scotia, is a prominent lumberman. He resides at Musquodoboit and is a Liberal in politics. Being in the Legislative Council he did not have to seek a renewal of the confidence of the electorate in the recent sampaign. He was appointed to the Upper Chamber of Nova Scotia in 1916. Previous to that he sat for Halifax in the Legislative Assembly. Mr. Logan was born in Stewiacke, Colchester County, in 1857.

Hon. R. M. MacGregor, (Pictou, N. S.) Member of Executive Council

Rufus S. Carter, ex-M.L.A. (Cumberland, N. S.)

Hon. Fulton J. Logan, (Halifax County, N.S.) Member of Legislative Council

Uncertainties Contractors Have to Face

Great Advances Will be Made in Construction Industries—Present Problems Call for More United Effort—Service and Co-operation

By J. Clark Reilly, Ottawa

"Analysis of income tax retufns shows that contracting is the most hazardous industry in the country. They show that the amount of loss for every dollar of profit made by construction corporations is eight times as great as it is manufacturing, agriculture, or personal service corporations; five times as great in transportation and public utility corporations; over three times as great as in mining and quarrying; and nearly twice as great as in banking.

"The reasons for this condition are due to the unusual number of doubtful elements in construction with which a contractor must work. It is unnecesasry to enumerate them. They are all too familiar. It is sufficient that the more such uncertainties can be eliminated, the lower will be the cost of construction to the owner, the more satisfactory will be the relations of the architect, the engineer and the contractor, and the more will contracts be awarded on a basis of skill, integrity and responsibility. Never was this more true or action on it more needed than at the present time."

The foregoing statement, quoted from a prominent American authority in the construction industries, applies equally to conditions existing in Canada, and furnishes us with one of the principal reasons for the formation of a Canadian association of the building and construction interests. One of the best measures to stabilize the industry is to bring those connected with it into close relationship, and furnish a common ground for discussion and action. In both the conferences which have been held, in November, 1918, when the Association of Canadian Building and Construction Industries was organized, and in February, 1920, the need for such stabilization has ben strongly emphasized.

It is an admitted fact that members of the construction industries have been far too provincial and individualistic. The system of competitive bids with fixed price for contract has tended to encourage this attitude, and increase the uncertainties. But in recent years there has been some evidence of a change. In several of the most progressive countries of the world, at practically the same time, the idea seems to have gained ground that the construction industry was suffering from a lack of organization, and efforts have been made to remedy the defect. The period of re-construction, subsequent to the war, hastened the movement. We found, in organizing our Association, that we were working along practically identical lines with our brothers in the industry elsewhere.

Greater Need for Unity Than Ever

The need for greater unity in the construction industries of Canada is becoming more apparent every day. To the careful student of conditions, it is evident that the problems which worry the builder, the contractor, the sub-contractor and the supply-man in Edmonton and Vancouver are in the main the same as those which keep his fellow-constructionist awake nights in Montreal, St. John, Toronto, or Halifax. Fluctuation of prices, difficulties of transportation, uncertain weather conditions, changes in plans, financial obligations, unforseen conditions, cost of equipment, labor troubles and many other similar worries are common to us all. A common meeting ground where these can be discussed will be furnished by the general conferences of the Association and the national council meetings.

The Association furnishes a medium for communication with the government, and with the representatives of organized labor. It has been very apparent, during the past year, that labor is making the strongest efforts toward the unification of labor laws throughout the Dominion. The questions of the eight--hour day, minimum wage, and workmen's compensation acts are of vital concern to our industry, and to secure the best legislation, which will at the same time protect our interests and give labor a fair deal, we need to present a strong and united front. There will be the necessity for strong provincial organizations, to deal with these matters as they arise in the provincial legislatures, but the new conditions demand also that our industry shall be adequately represented in proposed Dominion legislation.

The Association of Canadian Building and Construction Industries stands, as an effort to unify those engaged in the construction industry in Canada. The ideal method would have been to have organized local societies in each city, then have these organized into provincial bodies with a Canadian executive governing them all. Conditions already existing made it necessary to proceed in a rather different direction, for in a number of cities there were societies of builders already in existence, but in only two provinces were there provincial organizations making an effort to combine the local organizations. Consequently, the work of organization has gone slowly at first, and it has been necessary to incorporate a Canadian body, and work with it as a basis, endeavoring to secure the allegiance of the provincial and local organizations. In this direction both the Provincial Builders' and Supply Association of Ontario and the Associated Builders' Exchanges of Saskatchewan have gone on record at their last annual general meetings as expressing their affiliation with the Canadian Association, and have each elected three provincial councillors to the national council. The Province of Manitoba, through the thriving Winnipeg Exchange, is also actively identified with the movement. In Quebec, Alberta and New Brunswick, where there are no Provincial organizations, a number of the existing local associations have taken out "collective" memberships, and in several cities where no builders' organization was already in existence, branches of the Association have been formed.

The success of an Association such as ours depends upon two chief factors, namely, the service it renders to the industry, and the support it receives. In endeavoring to fulfil the first of these, we have been working along several lines and will extend our scope of operations just as rapidly as the support received warrants the additional expenditures.

Aiming to Adopt a Standard Contract

The office of the secretary is situated in Ottawa, in the Commercial Chambers, Sparks Street, and is intended to be a "service station" for the industry. Members are encouraged to write or wire inquiries regarding proposed legislation or information which they wish obtained from the governmental offices or the Department of Labor. Much valuable work has already been done in this way. It is also planned to keep a close watch on legislation affecting our industries as it is introduced, reporting same to the members throughout the country, and securing their co-operation in what action may be deemed necessary. As the opportunity arises information will be sent out from the secretary's office to the members, in the form of "service letters."

At the present time, the Association has two very important standing committees engaged in the consideration of matters affecting the industry throughout Canada. One of these is the Committee on Standard Practices, under the chairmanship of H. T. Hazleton, president of the Winnipeg Builders' Exchange. It is considering the problem of a satisfactory standard contract, which ought to be one of the simplest means to eliminate some of the uncertainties existing to-day in construction work. The aid of the Engineering Institute of Canada has been enlisted in the committee's deliberations and representatives are being appointed by both of these bodies. It is worth noting here that a similar committee appointed by the Associated General Contractors of America, has made a study of 113 forms of contracts of various types during the past year. Their committee is not yet prepared to submit a complete form of contract embodying every provision which should be included in a good contract, but have submitted some very interesting provisions. From this it will be seen that our committee has no small task on its hands, and any suggestions which may be given it by members of the industry will be appreciated.

The other standing committee was appointed to consider problems relating to labor, and consists of fourteen members, under the chairmanship of Mr. J. P. Anglin, Montreal. It is engaged in considering questions including: Responsibility of labor unions, annual agreements, apprenticeship, technical education, grading and classification of workmen, immigration of labor, eight and nine-hour day and standardization of wages. The Minister of Labor and the leaders of labor connected with the Canadian building industries have expressed their willingness to co-operate in discussion of these and other important matters and in the formation of a National Joint Conference Board.

We believe that the next few years will see great advances in the construction industries of our country, but the problems which will confront us will demand our utmost effort and united action. The Association of Canadian Building and Construction Industries is an endeavor to meet the situation and therefore requires the support and co-operation of every Canadian builder, contractor, sub-contractor and supply-man in its work.

Jottings and Views in the Pulpwood Arena

Cut of Pulpwood Large in Quebec

Reports received from Quebec and other points in the east show indications that the pulpwood cut this season will, no doubt, be heavier than last year. One of the largest concerns handling pulpwood is the Jost Co., Limited, of Montreal, who state that the Canadian railways are not increasing their equipment and the business of the country is demanding more transportation every day. While they do not wish to take a gloomy view o fthe situation, this firm say that it looks as if more than half of this season's cut is going to stay alongside of the tracks on account of the scarcity of the equipment to move the wood.

The Jost Company have had a rather unfavorable experience in connection with some of their own stock and altogether have not been able to move more than 10 per cent. of it. They are apprehensive that the greater part will not be shipped until some time next year. Under these circumstances they declare that the car situation will have a great deal to do with the price of pulpwood delivered at the mill. American plants are at the present time willing to pay comparatively high prices for immediate delivery of wood. A few United States mills are contracting for their next year's supply at a price around $2.00 and $3.00 less than what is being paid at the present time for immediate shipment. Sap peeled spruce and balsam pulpwood is being sold to-day at Watertown, N. Y., at around $30.00 or more per cord, but shipments cannot be made in any large quantities owing to the scarcity of cars. Along with spruce and balsam, peeled poplar and hemlock have also gone up in price. Poplar pulpwood is being very much controlled and the increased figure obtained for it is only for wood that is being cut this year and will be delivered next year. Under these conditions poplar that is already at the track and must be sold has to go at a low price.

The Jost Company has been shipping as much as 50 carloads of pulpwood per day to American and Canadian clients, but the pulpwood business at present is being done on the pressure of high competitive cost. The American mills are very anxious to obtain immediate supplies and have created a strong competition for the other buyers. On the other hand, the Canadian mills get quite a good proportion of the wood that is being shipped at a price lower than is being paid at the American plants, because Canadian car equipment can be used to move wood to points in the Maritime provinces and Quebec.

Hull is After Big Pulp Mills

The citizens of Hull, Que., are putting forth every effort to have the proposed new mills of the Riordon Co. located in that city instead of at Chelsea. The present plan of the Riordon people is to build a big dam at Chelsea, some 20 feet in height, which will back the Gatineau River up some seven miles. This will afford splendid power at this spot. It is pointed out that it is a very simple thing to convey the power seven miles or less, from Chelsea to Hull, where more labor is available than at Chelsea and housing conditions better, and sewage, water, light and heat immediately available. Ottawa interests are strongly backing representations from Hull for the location of the new industry, as a plant in Hull means a great deal for the prosperity of Ottawa, almost as much as if situated in the latter city. The two communities, in the matter of spending money, are practically one.

Poplar Pulpwood in Active Demand

J. L. White, Grand Falls, N. B., states that the prices of spruce and balsam to be delivered during the coming winter averages about $18.00 per cord, f.o.b. cars, in his district, although the figure for spot deliveries is considerably higher. The quotation for poplar is about $12.50 per cord, f.o.b. cars, with a demand for all that is available in the district. Poplar goes almost exclusively to the mills in Maine, but it is doubtful, adds Mr. White, if they could handle any large quantity of poplar from Ontario. Mr. White states that the production of all kinds of pulpwood in and around Grand Falls will not exceed to any great extent that of last year on account of the scarcity of labor, weather conditions, and the shortage of cars for shipment.

Recovering Many Cords of Pulpwood

The salvaging of 6,000 cords of pulp wood lost in the storm of September 24, 1919, is being accomplished along a 100-mile front on the south shore of Lake Superior from Copper Harbor on Keweenaw peninsula to Ontonagon and further west. This raft, invoiced at $34,000 when lost, is probably worth more now on account of pulp wood scarcity. It was a choice lot of four-foot wood from Nipigon Bay, Ont., in tow of the Canadian tug Traveler, and was bound for Ashland to be shipped by rail to the Wisconsin paper mill by its owner the Pulpwood Company of Appleton.

Search this sping showed that the raft had beached itself over such a wide territory of coast as to make salvage difficult. Quantities were found along the coast west of the Porcupine mountains near Union Bay, west of Ontonagon. Fifty miles up the coast the life savers at the mouth of the Portage canal had piled up some of the wood and were using it as fuel.

The largest quantities were found between Eagle River and Copper Harbour and at the latter place headquarters were established by Kingston, agent of the pulp wood company, and with a fleet of gasoline boats the wood is being made into a raft and secured by a boom of logs towed from Ashland by the tug Sauga tuck of Milwaukee.

A considerable quantity has already been taken care of and it is estimated that of the 6,000 cords lost in the storm, 4,000 cords may be towed to Ashland within a few weeks.

Making Additions to the Belgo Plant

The Belgo-Canadian Pulp & Paper Co., of Shawinigan Falls, Que., are making extensions to their plant. The contract for the buildings was let some time ago and the work is now in progress. There will be 533 wooden piles and 106 Raymond concrete piles supporting the foundations. There will be 2470 cu. yards of concrete foundations, 131 tons of structural steel and 544,000 bricks. The buildings will consist of grinder room extension with a span of 59.5 feet and 108 feet in length with the possibility of further extension. The boiler room addition will have a span of 64 feet and a length of 84 feet and the transmission building a span of 26 feet and a length of 74 feet. The latter will be located at the further end of the new boiler house.

The new groundwood mill will provide room for three grinder units, of which two will at present be installed. The new plant will be entirely electrically driven and the power will be supplied by the Shawinigan Water & Power Co. The current furnished will be 6000 volt, 3 phase, 60 cycles. The electrical equipment will consist of 3 2000 k v a. 60000 2200 volt and 3 1000 k v a. 60000 600 volt Westinghouse transformers, 2 2600 h.p. 225 r.p.m. 2200 volts 3 phase synchronous motors and 1 motor generator set, 875 r.p.m., 2200 volt, 3 phase and 125 kw., 125 volt D.C. respectively. The grinders will be of the magazine type, two to a unit, each grinder an approximate capacity of 20 tons.

Foresters Gather at Grand Mere

About thirty foresters from all parts of Canada and the Eastern States attended a three-day conference recently, which terminated at Grand Mere, Que., with a luncheon at the Laurentide Inn.

Mr. G. C. Piche, chief of the forest service of the provincial Government, briefly addressed the foresters at the luncheon, and outlined the forestry policy of the new premier, Hon. Mr. Taschereau. He said that in general the policy of Sir Lomer Gouin in dealing with the paper industry would be followed, and declared the new premier would make an announcement shortly relating to the classification of the size of the various kinds of wood that could be legally cut.

The foresters spent most of their time at the Proulx Nursery of the Laurentide Company, where experimental reforestation work is being carried on under the direction of Ellwood Wilson, head of the Forestry Department of the Laurentide Company.

The Services of Sir George Bury

Speaking of the recent resignation of Sir George Bury, President of the Whalen Pulp and Paper Mills Co., a Vancouver paper says.—

Arriving in Vancouver a year ago, Sir George found logging operations were more or less tied up by legal disputes. Creditors were clamoring for their money, and the employees were holding meetings and talking strike because their pay cheques were not cashed. The peace treaty had been signed, and the bottom fell out of the pulp market. The production of the mills had previously been disposed of in Japan, which country had advised that shipments be stopped, and it was necessary to find new markets quickly

and to face closing down the largest pulp plant for six weeks.

A steamer was chartered, and 2000 tons of pulp shipped to New York; sales were made in the East and the Middle West states, and though the prices obtained were small, it enabled the company with the new capital that was secured to weather the storm.

Although money was short, Sir George could see that log costs must increase, due to the boom in the lumber market, and he courageously faced the expenditure of a large sum, so that small wood might be used as in the eastern mills, and proceeded to install additional screens and other appliances so that the product of his plants might be equal to the best in the world. The wisdom of installing the small wood operations is borne out by the fact that the price of logs on the open market has doubled in the past year, while contracts have been let at a price which makes the small wood costs half that of logs.

He reorganized the personnel of all the plants, and the logging operations, and then proceeded to Japan, where he made a more favorable contract for the disposal of his mills' product.

New Company Secures Pulpwood Limits

The pulpwood limits acquired by the Fort William Pulp and Paper Co. comprise one thousand square miles of limits on the Garnd Trunk Pacific between Fort William and Sioux Lookout, known as the Farlinger-MacDonald limits. The lease runs twenty years with privilege of renewing for two further periods of 25 years each.

It is estimated half a million dollars yearly in freight rates will accrue to the Dominion government from the transport of pulp logs from the limits to the mills here, and in addition the government pulp-cutting dues.

May Make Paper From Seaweed

The manufacture of paper-pulp calls for an enormous quantity of raw material, and this demand in the course of time will become more and more emphatic. On this subject a French authority states that the sea-weed or sea-wreck possesses the desired properties for the production of a good paper pulp, and that it offers the following economical advantages. Besides furnishing a crop that is very abundant, this seaweed can be left to dry on the spot, and (before collection), cleaned by a rudimentary shaking process. For transportation it can be put up in bales.

Paper Suits Sell From $8 Up

Large quantities of paper suits made in Germany are being displayed by a British firm of importers at its shop in London, according to a despatch received in Washington.

These ready-made suits are cut to English styles and are said to be of the very best class of paper texture, and are being retailed at from $8 to $40 a suit. Last month 40,000 of these suits were imported by a firm of transport agents from Germany via Holland, and another consignment of 5,000 is on the way. Further consignments are expected to arrive at frequent intervals.

A large number of the suits have been re-exported to India and South Africa, says the despatch, but some merchants in London are of the opinion that in view of the present high price of clothing there are wide possibilities in paper suits, especially in industrial districts, if they could be cut more in the English style and to English tastes.

The agants who are dealing in these suits state that by buying under the present rate of exchange it is possible for a man to purchase a new suit once a week, and that over a period of twelve months the entire cost would be less than the price of one single English suit.

Aircraft Useful in Timber Industry

That he obtained more information regarding the timber and waterways of the country over which he had flown as the result of a few hours' air trip than he could have secured by years of travel on foot was the recent statement of a timber expert in Quebec. A flying boat was used for this exploration and survey of the forests of the northern part of the province, the trip of 850 miles being completed in 12½ hours of flying. Several stops were made to complete reports of the country travelled over as well as to secure more fuel. Besides the pilot and logging expert, the party included an aerial photographer. The results of this and similar journeys have added to the conviction of lumbermen that aircraft was extremely useful in the timber industry. In the woods of northern Quebec alone this season, 4000 miles have been explored in flying trips. A complete camping outfit is carried on these flying boats, including a tent, canoe and a plentiful supply of food.

Initial Dividend Declared by Big Firm

Riordon Company, Limited, Montreal, directors have declared an initial dividend of 1¾ per cent. on the $10,000,000 7 per cent. cumulative convertible preferred stock and an initial payment of 2 per cent. on the $10,000,000 8 per cent. first preferred stocks of the company. The payments cover the quarter ending September 30 next, payable October 1 to shareholders of record September 24.

In all $375,000 will thus be distributed, $187,000 of which will be paid into the treasury of the old Riordon Pulp and Paper Company, which holds $1,500,000 of the 8 per cent. securities and $9,000,000 of the 7 per cent. stock, in addition to $12,000,000 of common.

The regluar quarterly dividend of 1¾ per cent. was also declared on the $1,500,000 7 per cent. preferred stock of the Riordon Pulp and Paper Company, Limited, for the quarter ending September 30, payable September 30 to shareholders of record September 24.

Protecting Shipments of Newsprint

The accompanying cut shows the precautions which the Spanish River Pulp & Paper Mills take in the shipment of carloads of newsprint from their big plant at Espanola. Like lumber, newsprint is a valuable commodity nowadays, and in order to guard against any

Shipping car load of newsprint in paper lined and sealed cars

rain entering the car, the roof is covered with tar paper, which also projects over the side of the sliding door, to the joints of which cardboard is securely fastened. It will thus be seen that the car of newsprint is proof against all kinds of wet and sleet, while the car is also lined with about 200 lbs. of paper in order that the ends of the huge rolls may not be injured in any way.

Newfoundland Woods Shown in London

In connection with King George's reception of the British Empire Forestry Association, Newfoundland was represented at the Forestry Conference in London, and also was an exhibitor at the Empire Timber Exhibition. This exhibition, which was arranged by the Department of Overseas Trade, was opened by Prince Arthur of Connaught, at the Holland Park Skating Park, and the Newfoundland exhibit included reels of paper, wrapping paper, and sheathing paper, sheets of sulphite and ground-wood pulp; and samples of white spruce, black spruce, balsam, fir, white pine, white birch, yellow birch and larch. The Newfoundland representatives at the Conference were Sir Mayson M. Beeton and Mr. D. J. Davies, B.Sc., government analyst.

Enquiry Into Empire Timber Resources

H. D. Searles-Wood, chairman of the Timbers Committee, with headquarters at The Imperial Institute, London, S. W., Eng., makes the announcement that he will be glad to receive communications from all those who have knowledge of undeveloped timber resources within the Empire which may be suitable for structural or decorative purposes.

The committee consists of experts including representatives of the timber trade, nominated by the Timber Trades Federation, architects, nominated by the Royal Institute of British Architects, builders, nominated by the Institute of Builders, and of furniture manufacturers, nominated by the National Federation of Furniture Manufacturers.

Personal Paragraphs of Interest

Fred Milne of William Milne & Sons, North Bay, was in Toronto, recently.

J. Mackinson of the Deer Park Lumber Co., Deer Park, B. C., died a few days ago.

James Herron, the proprietor of a grist and sawmill at Herron's Mills, Ont., recently passed away.

Duncan McLaren, of the Union Lumber Co., Toronto, was in Winnipeg recently on a business trip.

W. T. Mason, of Mason, Gordon & Co., Montreal, was calling upon the trade in Toronto for a few days.

Arthur Leak, of Toronto, and Mrs. Leak recently returned from spending a pleasant holiday in New York and other cities.

Fred H. Bigwood of the Canadian General Lumber Co., Toronto, has returned after spending a pleasant holiday at Burlington, Vermont.

Sir Lomer Gouin, former Premier of the Province of Quebec, has entered on his new duties as political director of La Presse, Montreal.

George H. Mell, of Mell & Sons' Lumber Co., Philadelphia, Pa., was in Toronto recently and called upon a number of members of the trade.

A. Stanley Sutherland recently passed away at his home in Brookfield, Ont. Mr. Sutherland operated a sawmill at Brookfield for many years.

R. B. Elgie, of the Elgie and Jarvis Lumber Co., Toronto, and family, are spending a vacation at the Woodington House, Lake Rosseau, Muskoka.

The Larkin Lumber Co. will shortly remove their offices from 45 Canada Permanent Building, Toronto St., to larger quarters, at 442 Confederation Life Building, Toronto.

William Little, of Westmount, Que., who is one of the pioneer lumbermen of Canada, and a valued contributor to the columns of the "Canada Lumberman" from time to time, was in Toronto recently calling upon a number of friends in the industry.

James W. Sewall and James A. Conners, timber estimators and foresters of Old Town, Maine and Washington, D.C., have returned from a timber valuation trip in Tennessee. They report business exceedingly good, almost to the point of saturation.

George Newell, of Millville, N. B., where he farmed extensively but had been engaged on the river in the lumber business lately, jumped from the footboard of an automobile recently and was injured so seriously that he died at the hospital a short time later. He is survived by one daughter and two sons.

A. Fenton was recently appointed assistant to Mr. T. J. Stevenson, sales manager of the Riordon Sales Company, Limited, Montreal. Mr. Fenton, who has seen considerable service overseas, has been connected with the lumber mills department of the Riordon Company for 12 years, and has now charge of the lumber sales.

C. W. Montgomery of Truro, N.S., after 29 years' service in the Canadian Bank of Commerce, of which he was manager of the Truro branch for the past ten years, has severed his connection with that institution and has opened an office at Truro, and carries on a general brokerage business, handling lumber, insurance, real estate and investments.

W. C. Mason and C. E. Kimball have formed a partnership, under the name of the Mason, Kimball Lumber Co., with offices at Room 23, 212 McGill St., Montreal. The firm are wholesale dealers in a general line of lumber, including Western forest products. Mr. Mason has left for a trip to the Pacific Coast, where the firm intends to establish a branch office.

The death of Joseph R. Clarkson took place recently in Helensburg, Scotland, where he had lived in retirement for a number of years. He was for a long time managing director of the Partington Pulp and Paper Co. of St. John, N. B., (now the Nashwaak Pulp and Paper Co.) and leaves a wife and two sons, one of whom is J. B. Clarkson, who is on the staff of the Fraser Companies, Limited, Edmundston, N. B.

William Conklin, proprietor of the Conklin Planing Mills, Kingsville, Ont., has bought the lumber business and planing mill of John Fraser, Amherstburg, Ont., who is retiring from business. Charles Wellman, who for many years has been associated with the Windsor Lumber Co. at Windsor, Ont., has been appointed manager of the Amherstburg industry. Mr. Conklin now has four lumber yards at Kingsville, Woodslee, Cottam and Amherstburg.

W. J. Lovering, of Toronto, returned lately from a four weeks' trip to British Columbia. He states that the western crops look well and a record yield is looked for which should result in a good demand from the prairies for B. C. forest products. Several shingle mills which were closed down have resumed, and while business with several sawmills was quiet there is a belief that general activity will, in the near future, reassert itself in the lumber line.

L. Van Meter, vice-president of the Dennis-Canadian Co., Ottawa, Ont., who, it was announced recently, intended leaving that organization to enter upon a business of his own at Cadillac, Mich., which is his old home town, will remain in Canada for a longer period. The directors of the Dennis-Canadian Co., whose mills are at Whitney, strongly urged him to continue with them at this particular time and Mr. Van Meter agreed to stay for two years more. The manufacturing concern, which he organized at Cadillac, Mich., and in which he has a controlling interest, is the Cadillac Iron Works, which will begin operations in a short time and will be managed by Mr. Van Meter's oldest son who is a thoroughly-trained technical engineer. The many friends of Mr. Van Meter will be pleased to hear that he is not leaving Ottawa where he has resided for the past eight years. They will still have the pleasure of seeing him at the annual conventions of the Canadian Lumbermen's Association.

Hon. George Bryson Seriously Injured

Hon. George Bryson of the Fraser-Bryson Lumber Co., who is a member of the Legislative Council of Quebec, was recently injured when he was thrown from a carriage in which he was riding, near his home in Fort Coulonge, Que. He was being driven by his coachman when the horses became frightened and, believing they were unmanageable, Mr. Bryson attempted to spring from the vehicle.

Hon. George Bryson, Fort Coulonge, P. Q.

When he stood up to jump he was hurled headlong to the ground. His face was badly bruised and his left knee seriously injured, while he suffered much from shock. Hon. Mr. Bryson is sixty-eight years of age and has been engaged in the lumber business all his life. He served as Mayor of Mansfield and Pontefract and is a director of the Bank of Ottawa. He was appointed to the Legislative Council of Quebec in 1887.

Many Thrillers at Canadian National

Cols. Bishop and Barker will again have charge of the flying at the Canadian National Exhibition this year. Five machines of the latest and speediest types will be in use each evening and a display of daring and aerial skill even greater than last year is assured.

Mile-a-minute motor boats will also provide much excitement while lovers of thrills will find an additional treat on Saturday, Aug. 28, and Monday, Aug. 30, when the great dirt track kings of the continent will hold a two-day automobile meet. There will be a regular programme of races and to lend additional interest special purses of $1,000 and $500 have been provided for the drivers establishing a new world's or Dominion record for a half mile track. The entries already include Sig. Haugdahl, the world's dirt track champion; Bob Kline, Burr Lampkin, the British sensation, and others equally well known.

Miss Toronto, the boat which will take part in the races off the waterfront, recently established a world's record for a mile at 52.7 seconds and averaged 56 miles in her two forty-mile races for the Webb trophy. She showed an official mile at 68.3 miles an hour and unofficial made 70 miles an hour on Toronto Bay, and her owners expect to attain 72 miles before the season is over.

National Retail Lumbermen To Meet

Every preparation is being made for the Fourth Annual convention of the National Retail Lumber Dealers' Association, to be held in St. Louis, Mo., September 7th and 8th. The forthcoming gathering has been styled "the 100 per cent. retail lumber distributors conference," and the trade mark of the Association reveals an emblematic shield bearing the word "co-operation." It is expected that 2,000 successful retail lumber distributors will attend the conclave in St. Louis on September 7th and 8th, and some attractive and effective advertising is being done to boom the assembly. Successful business men always attend conventions pertaining to their own line of business. They may be asked why. Here are the answers that the National Retail Lumber Dealers' Association presents to the query: "Of course such men get information and ideas that are valuable to them, which make them successful, which they could not get any other way; besides they can help someone else by giving as well as absorbing ideas and information."

It is, therefore, expected that hundreds of alert and aggressive lumber merchants will hie themselves to St. Louis during the second week in September.

Loggers Want "Bolshies" Left Alone

A message calling for "hands off" the Bolsheviki was the final action of the lumber camp and agricultural workers' department of the O. B. U. convention held recently in Vancouver, B. C. It was forwarded to Premier Lloyd George. The convention went on record as protesting against the Allied Powers supplying arms and munitions and men to the "reactionary government" of Poland.

The next convention of the organization will be held next January at a place to be later decided. It was agreed to alter the election of executive officers from the present system of selecting them at large to a more representative form of electing by districts.

The convention decided to alter their constitution to include agricultural workers. This means that the union will be open to men employed in lumber, construction camps and on farms. It was also decided not to affiliate with any other labor body, but to pledge support to all working class movements directed toward industrial freedom.

A protest was made against the maintenance of an armed force and military control in Ireland. This resolution called on the British Government to give the people of Ireland an opportunity of self-government.

Will Stop Work of Log Pirates

The Log Pickers' Association, an organization of lumbermen on the Georgian Bay, formed to stop the operation of thieves who make a practice of stealing logs and who secured the passage of the Timber Marks Act by the Legislature, has begun to prosecute at Parry Sound, Ont.

George Bosley a log picker, who was found with 400 logs tied up at Bear's Head, was charged with picking up logs contrary to the Criminal code. He has consented to a trial before the Police Magistrate at Parry Sound. His defence is that he was given permission to gather logs by Manly Chew, a member of the Log Pickers' Association.

A mill owner was charged with violating the law as to having marked logs and cutting them, and he has elected to be tried by the District Judge.

British Columbia Forest Fires Quenched

Recent heavy showers and thunderstorms in many parts of British Columbia have improved conditions in the forest areas, and in numerous instances have extinguished fires. In the Vancouver forest district, however, hot and dry conditions caused the officials of the Forest Branch of the Department of Lands considerable anxiety, while hot, dry and windy weather in the Vernon area is requiring constant vigilance on the part of fire fighters.

In the Okanagan and Kamloops districts, too, extreme heat and parched vegetation demand active attention, according to a recent press despatch. All fires at Prince Rupert have died out and showers in the Cranbrook district have aided the officials of the department. Similar remarks apply to conditions at Nelson and Prince George.

Saguenay Company Had Good Year

The first annual report of the Saguenay Pulp & Paper Companies and its subsidiaries, formed a year or so ago to take over the several companies represented by the North American Pulp and Paper Companies Trust, covers the twelve months ended December 31st, last. It indicates an improved position of the new company over the old, gross revenue in the period having amounted to $5,416,545, as compared with $4,268,368, as shown in the 1918 report of North American Pulp Co. After bond interest net earnings amount to $464,636 against $442,227 for the old company in 1918, while the surplus of $33,651 compares with $38,005 for the North American Pulp Co. in 1918, the showing being lowered by way of creation of a reserve against depletion of timber limits of $263,001, and writing off of surplus of coal used in alterations of the Chandler mill of $149,067.

Among the assets are pulpwood on hand at cost $1,119,440, pulpwood on hand at cost $904,694, and advances on pulpwood, season 1919-20, $568,944.

In his report to shareholders, Hon. F. L. Beique, the president, says: "We are glad to announce that the Chandler mill, which heretofore has been a source of loss to the company, has been much improved and will show a substantial profit during the current year. The enlargement of one of the mills at Chicoutimi has also been completed, increasing considerably production of the company. Our pulp, both sulphite and mechanical, is now being sold at prices much higher than in 1919, and firm contracts which have been made for delivery during 1920 and 1921 warrant us in saying that the net income for each of these years will exceed three million dollars.

Which One of These Are You?

By J. C. Hemming

There are curious classes of individuals and you meet many of these complex characters. There is the chap who is going to take you to dine with him "some day," the neighbor or old friend who has promised to take you for a ride in his new automobile "one of these days" and the standing invitation, which has done duty from the era of the flood, "come over soon and see us."

Such glittering generalities have ceased to function. They lack point and earnestness, sincerity and conviction. This is a period of decisive action, definite arrangement and prompt method.

This "anytime" business is pretty nearly worn threadbare and should long ago have been consigned to the scrap heap of monotony and perfunctory politeness.

The age desires something that is not vague and intangible, something not elusive and evanescent.

The fellow, who is always "going to" do this and that is a pleasing promiser but generally a poor performer. The one who is always "going to" take you out in his car or motor launch, have you to lunch or visit his rural estate "some day" may think, by his exhibition of social interest and friendly spirit, that he is a fine fellow. He, who performs these little acts of courtesy or hospitality without much ado or promise but gets down to business in short order, counts far more in the genuine esteem of his confreres than he who is demonstrative or sentimental.

The men, who accomplish things really worth while, carry them out first and talk about them afterwards. They are not the chaps who are always "going to" or intend to do. The plans of these humans seemingly never materialize and their schemes seldom take definite shape except in their own imagination.

What the world calls for to-day is action and result, not bluster and bluff. If "an ounce of prevention is worth a pound of cure," a modern industrial interpretation might read "one day of practical execution is worth a month of tireless talk, day dreams and these "some time invitations" to lunch, to motor, to angle or to rusticate."

Newsy Jottings From the East

Walter H. Millican, Charles J. Melliday and Harry A. Powell, all of St. John, have been incorporated as the Imperial Lumber Company Ltd., with head office at St. John, and capital stock of $49,000. The company is authorized to carry on a general lumbering business in its various branches.

Chief Fire and Game Warden L. A. Gagnon has returned to his home in Fredericton after prosecuting forty cases for violation of the forest fire laws in the Province, as a result of which valuable timber lands were destroyed and thousands of acres of pulp wood burned. As a result of his efforas thirty-three convictions were secured, three were withdrawn and three cases dismissed. The charges were for setting fires without having secured a permit, and for refusing to assist in fighting fires; also for neglecting to keep fires within proper limits.

Larger Revenue from Crown Lands

Quebec Province Will Reap Augmented Returns from Public Domain in Near Future

In a decidedly interesting letter to the press Edward Beck of the Canadian Pulp and Paper Association, Montreal, says in part: Every reasonable reader will agree with your editorial approval of those parts of the Hon. L. A. Taschereau's programme speech dealing with the intention of the Government to look to the public domain for increased revenue in the not distant future.

Last year the Quebec Government profited to the amount of more than $2,000,000 from lumbering and pulpwood operations on its crown lands. Increased cutting fees, since inaugurated, will increase the revenue from this source. No disposition has been shown by the limit-holders to object to these increased assessments. The question does arise, however, as to what steps the Government is taking to insure a continuance of this source of revenue for the future.

The only way this can adequately be accomplished is for the Government to reinvest a fair proportion of the revenue thus obtained in restocking the lands from which the forest yield has been taken. Unless this is done, Quebec, notwithstanding its enormous heritage of forest wealth, will some day find itself in the position of the Eastern States, where, for many years, forestry has been carried on with little or no regard for the future, with the result that the forest areas are almost totally denuded of stock and industries dependent upon them for existence are confronted with the alternative of importing their raw material at enormous cost or of closing their doors.

Competent authorities aver that the Quebec Government should set aside at least 25 per cent. of the revenue derived from its forest resources for the replenishment of the cut-over lands and that in the long run this would prove to be a profitable investment. Some of the private corporations are already carrying on extensive reforestation operations, but to do it properly and on the extensive scale necessary to complete success, would require an investment not economically feasible for private capital. The lands belong to the State. The State alone is in a position to finance adequate reforestation, and since the State will ultimately reap the larger part of the reward, the State should assume most of the responsibility.

Sir Lomer Gouin, the late Premier, frequently subscribed to this view, and under his administration a good beginning was made by the establishment of a practical forestry service, with its own nurseries. But a great deal yet remains to be done and the new Government can undertake no work of greater value and importance to this province than to put its forest operations on a strictly scientific and economically sound basis, such as will not only take care of present needs, but also make adequate provision for the future, and, for that matter, all time to come.

Quebec should take a leaf out of the experience of Sweden. This province in forestry matters is to-day where Sweden was fifty or sixty years ago. Foreseeing the ultimate effects of unrestricted and unscientific forestry methods, the authorities of Sweden at that distant day inaugurated a system of conservation and re-planting which to-day ensures that country a perpetual supply of wood for its many industries. Sweden's forestry operations are conducted on a basis which keeps its forest capital intact and allows to be consumed merely the equivalent of the net annual forest increment. It is said to be the only country in the world where this has been brought about. Losses from fires and insect pests are reduced to a minimum and wasteful cutting is absolutely unknown.

The time is opportune for Quebec to start in where Sweden began. The new Premier is in a position to inaugurate a forest policy in connection with his intention to draw a larger percentage of the provincial revenues from the crown lands that will ensure greatly to his credit and to the great advantage of everybody concerned.

Big Enterprise for Northern Ontario

As announced in the last edition of the "Canada Lumberman" the Kimberly-Clark Co., of Neenah, Wis., who successfully operate and own several paper plants in the Western States, recently became largely interested in a financial way with the Spruce Falls Company of Kapuskasing, which organization was lately granted a provincial charter with a capital stock of $7,000,000. F. J. Sensenbrenner of the Kimberly-Clark Co. is president of the new organization; S. A. Mundy, of Bradford, Pa., vice-president; and J. C. Kimberly, of Neenah, Wis., secretary. E. Stewart, of Toronto, who was vice-president of the former Spruce Falls Pulp & Paper Co., is one of the directors of the new concern.

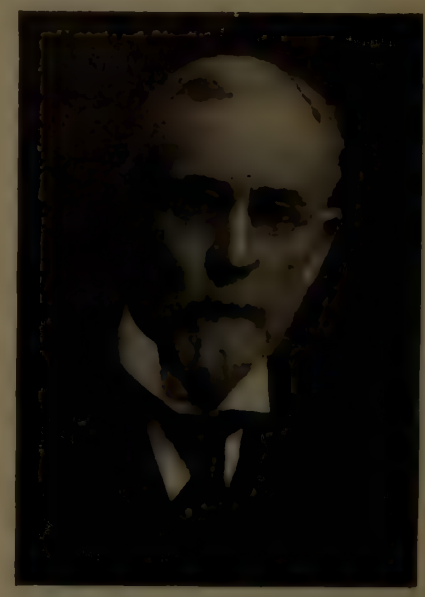
Further details in connection with the operation of the new company and the arrangements they have entered into with the Ontaria government are now announced . The undertakings in the way of a large pulp mill and a paper plant of 150 tons daily capacity should prove of much benefit to the settlers of northern Ontario and particularly those in the Kapuskasing district.

The company will take over the concession granted in 1918 to Mundy and Stewart, which extends to some 1500 square miles, and in addition they will be granted about 24,000 acres of adjoining land in O'Brien township.

In return the company have undertaken to begin operations this fall on the construction of pulp, paper and lumber mills. The previous concessionaires were, under their agreement, charged by the government a flat rate of 75c per cord for all timber cut, but the new company have agreed to pay $1.15 a cord for spruce and 95c a cord for all other kinds of timber. Any sawlog timber cut is to be used for lumber and paid for at current lumber rates.

The new company has also been given certain areas not reserved for settlement along the line of the railway, and for all spruce they cut there they are to pay $1.60 a cord and $1.30 a cord for other kinds. In addition they are to destroy all the brush in a manner satisfactory to the government.

The provincial farm established by the agricultural department at Kapuskasing, which consists of about 400 acres, will be taken over



E. Stewart, Toronto

by the company at a valuation to be fixed by government valuators. All buildings on the farm, except the school, will also be taken over and if the company desire to remove the school to another site it will be at their own expense and with the government's concurrence.

Permission to develop water power on the Kapuskasing River is included in the agreement. There is a 50-foot head on the river and 2,000 horse-power may be developed.

The sawmill, which will have a daily capacity of 70,000 feet, must be ready by January, 1921; the pulp mill, with a capacity of about 75 tons a day, by January, 1922, and the paper mill, with a capacity of 50 tons a day, by January, 1923. It is expected, however, that all these plants will be ready and in operation a considerable time before this. In fact, the roof of the sawmill will probably be on this fall.

In the agreement the government has laid down a new principle and one which will be observed in all future concessions granted, the premier declared. It has been provided that the company must furnish at least 15 per cent. of the output of newsprint to Canadian newspapers.

"This is the first time such a clause has been inserted in an agreement of this kind," said the premier, "and all future ones will contain it, too."

It is also the intention of the government to lay out a townsite on the concession instead of allowing the company to do so. The rights of the future inhabitants in the matter of power is safeguarded.

The premier wished it to be understood that with the exception of a comparatively small additional grant to round out the original area, the government were not making a new concession. They were simply approving of the transfer of the one granted to Mundy and Stewart to the Spruce Falls Paper Company. It is understood the original concessionaires will retain an interest in the new company.

Big Order From India for Ties

An order for four million feet of creosoted British Columbia ties has been received by the H. R. MacMillan Export Co., Limited, Vancouver, B. C., from the Government of India, and this will mean much activity in British Columbia mills and the Dominion Creosoting Works at North Vancouver. The order is to go forward by the first Canadian Government cargo vessel consigned to the India run and will be shipped towards the end of the year.

Mr. MacMillan secured the order while in India and the ties will be loaded for discharge at Calcutta. The lumber will be cut by the Associated Timber Exporters and creosoted at the North Vancouver works, which will be busy for three months on this consignment.

Only two previous orders for ties have gone to India from British Columbia. Some years ago Balfour, Guthrie & Co. shipped about four million feet for the Indian Government on a Harrison liner.

The foreign lumber trade has been slack for some time and this present order is taken as an indication that British Columbia is again to receive orders from off-shore points. The building of the government merchant marine is helping to solve the tonnage problem which is one of the difficulties.

Sawmill Men Will Handle Flax

The greatly increased acreage given over to flax in Huron County this year has necessitated further mill facilities and there are two instances in this neighborhood of sawmill owners extending their plants to handle the flax crop.

Ament Brothers, of Brussels, Ont., who do a large stave, heading and sawmill business, are now constructing an addition to their sawmill to be utilized in connection with their own flax output. The Ament Brothers, who have also been extensive farmers for years, report an excellent crop of flax this year, some of nearly four feet in height. The acreage is not very good, but the firm contemplate going into flax more extensively next year, encouraged by the results on that part of their land given over to the crop this season.

Mr. Philip Ament, father of the members of the firm, was one of those who attended the flax machine demonstration on the Bradley farm in Kent County.

Mr. John McDonald, of Walton, another sawmill owner, is erecting an up-to-date flax mill, and has a fine crop of flax himself this year.

Mills Around Timmins Are Busy

It is not generally known that about the gold area of Timmins, Ont., much lumbering has been carried on in the last few years, says a correspondent.

The Mattagami river furnishes a natural waterway and the T. and N. O. Railway has run a spur to the river. Now, when a number of the mines are closed down, the buzz of the saws may be heard incessantly, for the output, although surprising, still lags behind the demand.

As yet there are only five mills on the Mattagami within a radius of five miles from Timmins, yet this year 1,500,000 ties have been cut, making 3,000 car loads which have been pulled out of Timmins.

These ties of spruce and jack-pine sold at 90 cents each. Besides the ties, 6,000,000 or 7,000,000 feet of board lumber have been cut in the same radius and have been sold at approximately $40 and up per thousand feet.

A great deal of this lumber has gone to the building of stores and houses in the mining district. The shafting timbers and the heavy stalls for stopeing have also been a source of revenue to the lumber enterprises. The Hollinger mine alone has bought heavily of these heavy timbers for their huge underground operations.

The recent changes in the mining laws regarding the cutting and selling of timber on claims, does not affect those claims which were staked in the early days.s

It is felt in the North country that any man who faces the pioneer hardships should get any benefits that the country can give him, especially as the practice of husbanding forests from fires has proved a failure owing to inadequate fire protection.

They ask why the forerunners should not get the benefit of the timber instead of having it burnt, especially as by the clearing the bush opens up the country for the farmers.

Belgo Company Sawmills Are Active

Mr. H. E. Howe, manager of the lumbering operations of the Belgo-Canadian Pulp & Paper Co., Limited, Shawinigan Falls, Que., says that their drive was slow during the early spring, but improved greatly during the heavy rains in June. Their production will be a little above last year's, as they started sawing on April 19th, a little earlier than usual. The company, at their Shawinigan Falls plant, expect to cut about 10,000,000 feet of long lumber and about 1,500,000 feet of box boards.

The Belgo Company have had no difficulty in securing labor and have a better class of men this year than during the past three or four years. Wages are about 20 per cent. over last season, but the hours are the same, that is, nine hours a day, with the exception of the sawmill, which runs ten hours, and the company pay for the extra hour.

At the plant of the Riverside Mfg. Co. in Three Rivers, which is situated on the St. Maurice River, driving conditions this spring were about the same as at the Belgo Company. Sawing was started during the first week of June and production will be about 5,000,000 feet of lumber, 2,000,000 feet of lath, 1,000,000 shingles. Labor conditions are similar to Shawnigan and everything is running smoothly.

A large portion of the cut of both mills has been sold at satisfactory prices, but just now buyers are not making many purchases. They appear to expect lower prices although Mr. Howe does not believe that the prices have been cut by anyone in the district. Manufacturers seem to think that the present quietness is only temporary and that quotations will go higher in the fall. Local trade has been exceptionally good and there has been a splendid demand at steady values.

In Three Rivers the St. Maurice Paper Company's sawmill is not operating this year, but the sawmills of the St. Maurice Lumber Co., Wayagamack Pulp & Paper Co. and Mr. Dansereaux are all operating.

Mr. Isherwood Plans to Visit Canada

Writing to the "Canada Lumberman" H. R. Isherwood of St. Louis, Mo., secretary-treasurer of the Concatenated Order of Hoo-Hoo, says: I sincerely hope that in the latter part of the year or early part of the coming year, I can spend some time in the principal cities of Canada and have the opportunity of meeting with members and lumbermen, and outlining to them the present activities and future plans of the Order of Hoo-Hoo that will enable me to increase our membership, as I would like. At the same time I hope that I may have the opportunity of serving the lumbermen by addressing them and discussing problems on the merchandising of lumber product.

I am starting a movement to organize Hoo-Hoo clubs, and in doing so my first move is to have the vicegerents or members in the different districts select a hotel for Hoo-Hoo headquarters in which we will arrange to supply a large emblem of our Order for display in the lobby. In this connection we will establish a Bureau of Information for the benefit of our members. This will have many advantages and many features, which, in itself, I feel will be well worth the annual dues paid into this organization. This will also serve as a means of bringing members and lumbermen together often and, at times, other than concatenation. Many new plans are being developed, which will be acted upon and passed at the coming annual meeting in St. Louis, which will be one of the largest and most interesting held for many years.

Legal Action Over Ownership of Logs

A preliminary investigation was in progress recently in the Court of Sessions, presided over by Magistrate Corriveau in the case of the Abitibi Power & Paper Co. against five lumbermen of La Sarre, who are accused of having in their possession pulp wood logs, the property of the company, which had been taken in the White River, Abitibi. The investigation commenced in the Circuit Court Chamber, when Messrs. J. N. K. Laflamme, K. C., M.P.P., who appear for the defence, admit that the clients had been found with wood in their possession, claimed to be the property of the Abitibi Power & Paper Co., Ltd., but the action should have been taken in the civil court and not the Court of Sessions, which had no jurisdiction in such a case. Mr. R. Taschereau, K.C., Montreal, contended that the wood which had been in possession of the defendants bore the registered mark of the company, and under no consideration should the defendants have retained the wood, which was a violation of the law.

Congestion of Lumber on Miramichi

Considerable congestion of manufactured lumber exists along the Miramichi river in New Brunswick, as only six vessels have taken lumber cargoes from the river this season. The mill men have great quantities awaiting shipment and many of them are cramped for room. The Snowball Company is hauling lumber to piling grounds at some distance from their mill at Chatham.

Drying Schedule for Air-Seasoned Oak

The following skeleton drying schedule is recommended for the kiln drying of air-seasoned oak. It must be remembered, however, that no mere formula in itself will insure the perfect drying of wood. The kiln operator must be trained to watch the condition of the lumber and to apply the proper remedies if things start to go wrong.

The schedule was prepared by the U. S. Forest Products Laboratory for 4/4 plain-sawed oak (highland variety) with a moisture content of 15 per cent. This moisture condition would ordinarily be reached in from 9 to 12 months of air seasoning.

Stage of kiln run in hours	Temperature degrees F.	Humidity per cent.
1	120	100
6	120	100
12	125	85
24	125	80
36	130	70
48	130	60
60	135	60
72	135	60
84	140	60
96	140	50
108	140	50
120	140	40
144	140	40
156	145	35
168	145	35
180	145	30
192	145	25
Until dry	145	25

After the stock is dry, the temperature should be held at 145 degrees and the humidity raised to 80 per cent. This condition should be maintained for 10 hours in order to balance the moisture content, thus reducing the tendency of the lumber to warp after machining.

Valuable Works of Reference

An interesting and artistic booklet was recently issued by James Davidson's Sons, Ottawa, Canada. It is called "Davidson's Portable Cottages." There are shown pictures of the manufacturing plant in Ottawa, the company's sawmill at Davidson, Que., photographs of the late James Davidson, (the founder of the business), and his two sons, Grant P. Davidson and Lieut. Keith Davidson, who are directing the large enterprise. The leading characteristics and special features of Davidson's portable houses are pointed out and a number of illustrations given, not only of cottages but of hunters' cabins, churches, garages, hen houses, dog houses, refrigerators and other accessories.

The firm lately put out a most complete and neatly bound catalogue of sash, doors, blinds, boxes and shooks. The illustrations are particularly well executed, the grouping is effective and a vast amount of data is presented on doors, blinds, portable houses, sash, etc. James Davidson's Sons announce that their slogan is "from tree to finished product." They cut the logs and saw the lumber into doors, sash, blinds, etc., which enables them to meet adequately the requirements of the trade.

Proper Grading and Handling of Lumber

Editor, "Canada Lumberman."—

I have read with interest the letter from Mr. James Charron which was published in the June 15th edition of the "Canada Lumberman."

I may say regarding the marketing of lumber for export that English exporters having offices in Quebec, Montreal, Ottawa and Toronto, have no difficulty in disposing of forest products and other export markets are cared for by United States firms.

The term "mill run" has always meant all good lumber cut and all cull lumber out, in white pine, at all large mills. Sometimes 1, 2 and 3 cut-ups are included and at other times are not. The term "shipping cull" has three meanings—No. 2, No. 3 and No. 4 deal or No. 2 and 3 deal and No. 4 deal—much depends upon where the product is shipped from.

In regard to an item from Sarnia, which appeared in your paper, I notice an error. The reference should read "fine, common and better," which means a nice grade of good siding. This will explain the confusion.

"Cut ups and better," or the term "and better" after any grade, means there is better lumber than the grade mentioned and the price is put on to care for the greater value.

The simple grading of lumber or groups to suit as many as wanted might for the trade be graded as follows:

1—Good sidings, shorts and strips.
2—Outs of good (when shipping good.)
3—No. 1 cutup.
4—No. 2 cutup.
5—No. 3 cutup.
6—Dressing.
7—No. 1 barn.
8—No. 2 barn.
9—No. 3 barn.
10—Box.
11—Mill cull.
12—Dead culls.

Grouping these grades, good and outs of good. are in the same pile and can be tallied separately when stripping or the cuts laid out and shipped later. In 1, 2 and 3 cutups each grade can be tallied separately when shipping and, if any difference of opinion exists in the value of the time of the sale, 1 or 2 cutups can go well together and 3 cutups be piled separately.

Dressing, 1, 2 and 3 barn and any number of these grades may be piled together or separately to suit the purchaser. Coarse box and No. 1 mill culls is a natural grade. No. 2 mill culls can be kept separately or piled with No. 3 mill culls.

In regard to retail or factory yards, any good lumber should be piled in sheds. The piling should be close when the stock is dry and loose when the lumber is green. The lumber should be graded to suit the use to which it will be devoted or the particular trade by which it will be handled, at the time the stock is taken from the car.

Successful buying for a factory means getting the grade of lumber to suit with as little waste as possible. Good lumber piled in the open air should be well covered on front and back as well as at the top, and also the ends of thick hardwood painted with red bridge paint and piled on a three stringer pile bottoms, with a crosser over each stringer and the fourth one on the tail-end in inch lumber.

Sincerely Yours,

M. H. Haney,

270 Bronson Ave., Toronto.

Can You Stand Prosperity?

We dread to see some managers get beyond a certain stage because we know that as soon as they do they will begin to go down grade. They lose their heads. They begin to feel as though they can accomplish anything. They run wild!

We see dozens of them fail every year—not in our own organization alone but in others. They come in and tell us how much money they are making for their company and how little of it they are getting. We shudder when we hear a bright young fellow begin to talk that way. It means he is getting way out of line. His perspective is distorted.

His head is swelling.

Ambition is alright so long as it is sensible and logical. Overambition is bad. It makes fools out of men. They become surcharged with their own importance and becomehope TH figam bmc charged with their own importance and before they know it they are looking in new places for greater opportunities when they neglected to dig the diamonds in the fields which they deserted.

There was a little poem published in the "Tote-Road and "Trail" by Douglas Malloch which every manager should read every now and then whenever the "engine begins to race" a little. Perhaps you know it. If not, you should. Here it is:

It's easy to haul on the level,
A tote-road that's smooth as the floor;
You may have to work like the devil
An' pull till your shoulder is sore;
An' even a hill may not best you,
A little upgrade now an' then—
But there is one road that will test you,
The test of both horses and men.

Exploration Made by Hydroplane

Recently the Laurentide Company, Gdand'Mere, P. Q., made an exploration of their northern limits by means of the company's hydroplane. The trip was made by Lt. Stuart Graham, the pilot; his mechanician, M. Kahre; Mr. M. C. Small, chief of the logging division; C. R. Townsend, aerial photographer; and Philippe Charland, one of the explorers of the company. Mr. Charland who had previously spent eight weeks in exploring the district by canoe, states that the flight permitted of the work being checked up in less than three hours.

Lumber Business is Big Economic Problem

Its Expansion and Successful Operation Materially Aided by Scientific Means—How Industrial Research Assists in Conservation

Extensive conservation of the national wealth of wood through more efficient utilization was the keynote sounded throughout the recent decennial celebration at the Forest Products Laboratory at Madison, Wisconsin. Over 200 visitors from all parts of the United States were present, representing every line of wood-using industry, including 59 wood-using associations and companies, 18 lumber manufacturing associations and companies, the Deans of 12 Forestry schools, the United States Forest Service, and other visitors and friends. They came to pay tribute to the laboratory's ten-year record of service to American industry.

The Forest Products Laboratory is a government institution of industrial research in wood and all wood products maintained by the United States Forest Service in co-operation with the University of Wisconsin. In this work 220 engineers, wood technologists, manufacturing specialists and assistants are employed in developing new uses for wood and improving present manufacturing methods. Investigations and experiments are undertaken both independently and for individuals and companies on a co-operative basis. Results obtained are disseminated through co-operative reports, commercial demonstration, correspondence, government bulletins, mineographed circulars, articles in the trade press, and practical instruction courses given at the laboratory.

The program continued with inspection of the work and exhibits of the laboratory. Guides in charge of small parties showed the visitors the various lines of endeavor in which the laboratory is saving millions of dollars a year to the people of the country. Following the inspection trip was a period for recreation, consisting of automobile tours around the city, boat rides, and swimming.

Nearly 500 prominent lumbermen, manufacturers and users of forest products, and members of the Forest Products Laboratory attended the banquet. Lieut.-Col. W. B. Greeley, Chief Forester of the United States, spoke on "Forests and National Prosperity." Following the address of Colonel Greeley, Mr. Max Mason, research specialist of the National Council of Defence, gave an illustrated talk explaining in detail the submarine detector which he perfected during the war, and which was successfully used in European waters.

Mr. John Foley, forester for the Pennsylvania Railroad, was chairman, introducing the speakers as follows: D. C. Everest, secretary and general-manager, Marathon Paper Mills Company, "Some Problems of the Pulp and Paper Industry"; H. T. Howe, chairman, Research Extension Division, National Research Council, "America's Place in Industrial Research"; and W. A. Gilchrist, representing the National Lumber Manufacturers' Association on "Some Problems of the Lumber Industry."

Mr. Gilchrist spoke from the viewpoint of the lumberman. He offered a plea for a more sympathetic understanding of the earnest efforts of the lumbermen to protect the forests and conserve wastes. "The lumber business," he said, "no different from any other commercial industry, is an economic problem and failure confronts if pursued in any other manner." "The task that confronts us is one of mere engineering—to establish rules covering the creation of suitable mechanism. Who better can accomplish this than an engineer co-operating with the woodsmen? Certain activities of this wonderful institution, the Forest Products Laboratory, are attracting the earnest attention of members of our industry. Being engaged in the commercial side of the lumber business I hear comments of the most favorable nature that I fear do not come to the ears of those sincere men engaged in directing this activity."

The Forest Products Laboratory celebration afforded an opportunity to a number of forestry and lumbering organizations of holding conferences following the close of the decennial program. The Executive Committe of the American Wood Preservers' Association met, and at the same time a conference on reforestation by wood-using industries was held in co-operation with the representatives of federal, state and lumber-producing interests. There were also meetings of the deans of the forestry and engineering schools of the country, and of the Inter-regional Technical Committee of the National Lumber Manufacturers' Association. Most of the 200 lumber men and lumber manufacturers who attended the Forest Products Laboratory program remained for the various conferences.

At the conference on reforestation, attended by lumbermen and representatives of wood-using industries, the program of addresses included: "What Should be our National Forest Policy," Lieut.-Col. W. B. Greeley, United States Forest Service; "The Lumberman's Interest in Reforestation," A. L. Osborne, vice-chairman Forestry Committee of the National Iumber Manufacturers' Association; and "Why Should the Wood-Using Industries be Interested in Reforestation."

A resolution appointing a committee, at the reforestation conference, Madison, Wisconsin, was carried, as follows:

Whereas, representatives of wood-using industries in an initial conference at Madison, Wisconsin, on July 23rd, 1920, have considered that their interest in reforestation is definite, and that any legislation enacted or proposed for enactment should have the endorsement of all wood-using industries, and whereas, there is a need of securing adequate intelligence of all phases of reforestation through cooperation with all energies active to that end—such as

The Forest Products Laboratory of the United States at Madison, Wis., which recently celebrated its tenth anniversary

federal government, state government and private owned interests co-operating with programs already initiated, and, whereas, there must be some centralized agency to serve for the wood-using industries and report to them such progress as develops from time to time, therefore be it

Resolved, that it is the sense of this conference that the wood-using industries declare a profound interest in reforestation: That this conference authorize the chairman to appoint a committee whose duty shall be to formulate a definite plan for organizing a committee representing all the associations of wood users for the purpose of considering present or proposed legislation dealing with reforestation and for formulating a program of federal and state legislation which will represent the views and interests of the wood-using industries.

Every Farmer Might be Forester

The suggestion in regard to reforestation that came up at the June meeting of Hastings County Council is worthy of being passed on, says the Cobourg "World." It was suggested that five acre plots in each township be set out to trees by way of experiment, planting them with pine and maple principally. A still better suggestion is for every farm to have a reforestation plant of its own, by raising young trees to take the place of those cut off. Both are good ways of building for the future.

A forestry and print paper conference will be held at New London, N. H., August 24, 25, and 26, it was announced by the American Forestry Association. Both the United States and Canada will be represented. The meeting will be under the auspices of the Society for the Protection of New Hampshire Forests.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber— —Positions Wanted & Vacant

Lumber Wanted

LATH

5 million lath wanted. State quantity, grade and lowest price. Box 353, Canada Lumberman. 16

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Birch Wanted

No. 1 Com. and Btr., 4/4" to 16/4". Name us your best prices delivered here for dry stock. Will contract for mill output in Birch, Elm, Basswood and Ash.

WARREN ROSS LUMBER CO.,
10-t.f. Jamestown, N.Y.

WANTED

White Pine Spruce
ALL GRADES.
Also LATH of all grades

JOHN F. BURKE,
2-t.f. Aeolian Bldg., New York City.

White Pine Wanted

One car or more each of:
1 x 10" x 16'
1¼" x 10" x 12 to 16'
2" x 12" x 16'
1¼" x 8" x 12 to 16'
1¼" x 12" x 12 to 16'
1" x 12" x 16'

in best grade you can furnish, which please describe in your offer.

G. ELIAS & BRO. INC.,
15-17 Buffalo, N.Y.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited,
12-t.f. 123 Bay St., Toronto.

Lumber For Sale

FOR SALE: Cull staves for crating purposes, thirty inches long, from four to seven inches wide, one-third of an inch thick. Trenton Cooperage Mills, Ltd., Trenton, Ont. 13-16

For Sale—Birch Lumber

About 750,000 ft. of Birch Lumber 4/4; 8/4; 12/4 and 16/4. This year's cut. Apply Box 343 Canada Lumberman. 16-19

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co., Jamestown, N.Y. 6-t.f.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Laths For Sale

Also 500 M. ft. White Pine L. R., D.C.O.
500 M. ft. Hardwood—Birch, Maple, etc.

Toronto, Ont.

Toronto, August 6, 1920. 16

Auction Sale of Timber Berth

There will be offered for sale by public auction, subject to an upset price to be made known at the time of sale, at the office of the Indian Superintendent at Parry Sound, Ont., on the first day of September, 1920, at the hour of three in the afternoon, all the merchantable timber of ten inches in diameter at the stump at present growing on that portion of the Gibson Indian Reserve which is situate north and east of the Muskoka river in concessions 7, 8, 9, 10, 11 and 12 with the exception of lot 1, Con. 10 and lot 3 Con. 11.

The timber will be offered for sale at a cash bonus over and above dues at the following tariff rates:—

Pine, $2.50 per M.f.b.m. or $25 per M. cu. ft.

Ash, Elm, Maple, Oak, $2.00 per M. f.b.m. or $20 per M. cu. ft.

Birch, Beech, Basswood, $1.50 per M. f.b.m. or $15 per M. cu. ft.

Cedar, Tamarac, $1.50 per M.f.b.m. or $15 per M. cu. ft.

Spruce, $1.25 per M.f.b.m. or $12 per M. per M. cu. ft.

Hemlock, $1.00 per M.f.b.m. or $10 per M. cu. ft.

Hemlock bark, 60c per cord or 128 cu. feet.

All logs over 18 feet in length to be scaled under the cubic foot standard, and the rate of dues on other classes of timber not specified above may be had on application.

The purchaser of the timber shall be required to pay 10 per cent. of his bid at the time of sale and the balance of bonus within thirty days from date of sale.

The timber must all be cut and removed within a period of ten years and an annual license will be granted during this time provided the regulations are complied with.

Sworn returns by a licensed culler must be furnished at the end of each season and half the cost of adequate fire-guardianship will be charged against the licensee.

The purchaser of the timber shall be required to give preference in the matter of employment of labour in cutting the timber, to the Indians of the Gibson band and a reasonable amount of care must be taken to avoid any undue fire risk.

The area covered by the sale is approximately 6,000 acres and plan of the Reserve, copy of the regulations and any other information that may be desired can be obtained from the undersigned or from Mr. Alex. Logan, Indian Superintendent at Parry Sound.

DUNCAN C. SCOTT,
Deputy Superintendent General
of Indian Affairs.

Ottawa, July 21st, 1920. 16

For Sale

This outfit is for use in Canada therefore preference will be given to offerings from there. A good steam feed rotary and band-resaw would be considered.

Address with full particulars, Box 310, Canada Lumberman and Woodworker. 14-17

Closed Shop Agreements Declared Illegal

A knock-out blow has been given the closed shop interests in Hudson County, N. J., by a recent permanent injunction granted by the Court of Chancery against a number of labor unions. Contempt proceedings growing out of the controversy are also before the court, with indications pointing to convictions and severe sentences for a number of strike leaders who violated the restraining orders of the court.

Trouble had been brewing for some time with the teamsters and truck drivers working for the building supply dealers. When the time arrived, earlier in the year, for a renewal of the agreement with these men they asked for an advance of $10.00 a week and a nine hour day instead of ten. They had been receiving $30.00 a week for motor truck work and $28.00 a week for teamsters. About fifteen nrms were affected and they offered the men an advance of $3.00 a week. This was refused. A strike was declared and for eight or ten weeks not a truck wheel turned. The dealers then met, organized and started a fight to a finish. The result was an application to the court for an injunction against the strikers.

Following a hearing of the case the court granted a temporary injunction which was made permanent a few weeks later. The order is a sweeping one. It not only holds that "closed shop" agreements are illegal, but also bars strike benefits. In its decision the court makes the following remarks:

"The proofs are satisfying that the business and property rights of complainants have been and are seriously interfered with and are threatened with irreparable injury by the picketing, intimidation and coercion indulged in by former employees, and others associated and acting in concert with them, under the direction, or with the sanction of the defendents or some of them.

"Objection is particularly urged against the injunctive relief sought relating to the execution of the contract containing the provisions for making the yards of complainants 'closed shops' to all non-union men; the insistment being that if such contracts are illegal, complainants need not perform them; and further, because complainants during the past five years have executed, without objection, contracts containing similar provisions.

"Contracts of this character containing provisions designed to unionize an entire industry in a territory as large as Hudson County, do not appear to have come directly before our courts for consideration. In other jurisdictions where they have been involved, they have uniformly been held to be illegal as against business policy. The illegality of such contracts is pronounced upon the fundamental principles of our theory of government, to which monopolies of any kind affecting in any way the utmost freedom of the individual to pursue his lawful trade or business are abhorrent."

Simultaneously with this decision, the building supply dealers throughout the county adopted the principles of the open shop, and publicly announced this action. In this, the fifteen concerns which secured the court ruling were joined by others, until a total of thirty building material and lumber concerns of all kinds stood together for this policy. And this is just where they stand today.

In a general letter to the trade. the dealers said in part:

"Strikes, corruption, assaults, broken contracts, secondary boycott, fines on employee and employer, expulsion from the union, idleness, denial of right to work and to do business, reduced production, artificially high prices and high cost of living are the companions of the closed shop agreement. That is too high a price to pay for the peace offered by the labor leaders."

The Grand Jury of the county, sitting at Jersey City, has also been hearing a number of cases dealing with assault and battery growing out of the strike, and that indictments will be found seems certain. In charging this jury, Justice Swayze, with direct reference to the pending strike cases, said:

"....Breaches of the peace of this character, which consist in some cases of slugging a man with a blackjack, in some cases of throwing bricks at him, in some cases of seizing by force the control of the truck he is driving—all are of a character that may possibly result in death, and if as a result of any of these breaches of the peace death should ensue, all of these gentlemen who entered into an agreement knowing that breaches of the peace were likely, agreeing to bring about their end by force—all of these gentlemen may be liable to indictment for murder."

As the weeks have gone by and the open shop policy has shown its many advantages, the dealers have advanced the wages of the men voluntarily. It is said by employers that the men now on the payroll show a keen willingness to be "on the job" and to do what is expected of them. With conditions again at normal, the companies know just where they are at, and so do the new men.

Several attempts have recently been made in Ontario to introduce the closed shop in woodworking factories. Unless the movement is defeated decisively at the outset, others will be started at new points. The account of the situation in Hudson County, N. J., is published above in order to assist those of our members who have already had this situation to face and those who may be threatened with it later. The advocates of the closed shop are certain to make a determined effort now to spread its baneful influence wherever possible.

Furnace Keeps House Cool in Summer

Most people are satisfied if the furnace will keep them warm in winter, but there are others who insist it shall keep them cool in summer as well.

One Iowa builder has discovered that by a simple device, he can circulate the cool air of the basement throughout the house.

It consists simply in cutting a hole through the outside casing of the furnace and placing an electric fan in front of it.

This builder would do well to remember that wooden shingles are non-conductors of heat and cold, that they could keep the house cool in summer and warm in winter.

The wooden shingle is a great saver of heat during the winter and in the summer makes a home that is shingled a much more pleasant place in which to live. There is a great difference between the temperature in a house covered with wooden shingles and one covered with any other form of roofing. The difference is always in favor of the shingled house.

Review of Current Trade Conditions

Ontario and the East

General market conditions in the lumber line remain practically unchanged during the past two weeks. Some wholesalers report trade particularly active for this season of the year, while others do not expect conditions to revive till a little later on in the fall, when the farmers are through their harvesting and the promising yield of western crops is definitely assured. A number of rural retail lumber dealers whose stock has been getting pretty low are buying in moderate quantities.

Shingles have gone up considerably in price and the trend is still upwards. Some time ago they were sold at less than cost of production and even then eastern representatives of western firms found it difficult to dispose of several cars that were in transit, as falling prices are not, as a rule, conducive to either satisfactory selling or satisfactory buying. When the movement is upward a much better tone prevails. Word received from the West is to the effect that stocks with a number of B. C. mills are lower than they have been for some years—in fact, a few companies report that material on hand is less than last winter. There is a scarcity of No. 2 boards and shiplap, but otherwise a fairly free movement in the way of flooring, ceiling, trim, etc.

Building has been fairly active in most Ontario towns and also in the eastern provinces especially in the larger cities. The volume has now begun to fall off as all speculative building is over for the year. The farmers will undertake considerable work after the harvest, in the way of repairs and extensions, and this should constitute a good fall trade for the next few months. On the recent annual outing of the Ontario Retail Lumber Dealers' Association to Northern Ontario there was naturally much conversation along the lines of supply and demand and the general expression of opinion was that matters during the past season had worked themselves out well, and few, if any, complaints were heard.

Eastern salesmen of B. C. lumber stocks look for a brisk demand from line and other yards on the prairies within the next month or two. A bumper harvest materially develops business in not only ordinary commercial avenues, but in forest products as well.

Prices on all eastern stuff, especially white pine, are holding firm in the vast majority of instances and the car situation is reported to be improved at several points. At some shipping centres, however, cars are none too plentiful. Sawmills are busy throughout the east and north, with the result that some of them have already finished their cut for the season and others will be through operations at the end of the present month, having consumed all the logs available in their respective territories. Large firms are now getting ready for logging for 1920-21 but some will not take out as heavy a quantity of timber as last year. Owing to the rather dark outlook in Europe, due to the Polish situation there may be another war, which would further restrict the present limited export trade.

It is stated that owing to the probable increase of freight rates at an early date some shippers are sending out their consignments as rapidly as possible in order to escape the higher tariff. The lumbermen, as a whole, do not view the increase in rates with any degree of favor, but the law of circumstance holds sway now-a-days, and there is no escape from the "vicious circle" of mounting expenses of production and distribution.

There is considerable talk heard regarding values which will prevail this fall and the general view is that they will continue strong and that there is nothing in sight to-day to feel nervous about. The wholesalers believe that a dealer who wants to continue doing a satisfactory business had better keep a fair stock. Ot course they admit a possibility of lower prices, but, on the other hand, there are many factors, chief among them the higher freight rates expected, that may cause price advances. It is hard to tell fhat is ahead, but the chances seem to be in favor of continued firm prices. The attitude of the retailers fits in fairly with this point of view, as they seem to be buying quite steadily.

United States

The shortage of railway cars and the promising crop prospects in all parts of the country are engaging the attention of the lumber trade. Building has fallen off and business with most lumber dealers is quiet. The whole situation is that there is no building going on in the ordinary sense of the word. There are, of course, some large office, hotel and theatre projects which have been practically paid for already, and at that, use very little lumber, but the ordinary building, industrial and home, which consumes the stock of the retail yard, has practically stopped. Although they are busy to a certain extent with repair work and the like, none of the yards have any real building jobs on hand.

Recent advices from a Boston firm say that spruce alone held fairly firm and save for the necessary sacrifice of some transit cars, the market did not fall below $60.00 until the last few days of the month. Unfortunately certain of the older wholesale houses had stock shipped in, apparently on consignment, as they most certainly have given it away. We know of an instance of Nova Scotia Random Spruce which was sold at $47.00 and, to quote another case of some 2 x 4 Eastern Random Spruce at $51.00. Consequently we would quote the market in Random as say from $50.00 to $55.00, with dimension stock bringing from $54.00 to $58.00.

The gravity of the car situation and its relation to future lumber deliveries have not been over estimated. Some producing districts are fairly well supplied with cars, but the scarcity is increasing and, in some parts of the Douglas fir region, a crisis is approaching. It is a condition that will so limit the deliveries of lumber that prices will of necessity be maintained. There is some relief in the East since coastwise shipping has been resumed.

Douglas fir and yellow pine prices have retained the slight gains that have been made and are fairly stable. Other structural woods are firm.

The most important development in hardwoods is the increase in export demand. Though bookings are not yet large, as compared with pre-war standards, there has been appreciable gain and further increase is anticipated. Domestic demand remains flabby and concessions are more frequent when stock is pushed on the market. Altogether hardwoods are somewhat weaker than for the past few weeks, but the outlook points to improvement, as stocks are still below normal, and it is believed that buying by industrials cannot be much longer postponed.

The hemlock situation continues quite firm, the slight recovery in yellow pine and fir having reflected advantageously to hemlock manufacturers. Demand, while not heavy, is about as good as is usual at this time of the year.

Great Britain

So far as hardwoods are concerned it appears almost certain that the establishing of lower prices will be a lengthy process. The slackening off of the demand temporarily quickened the operation, but this factor alone will not make for a permanent decrease in values. Much depends on the new conditions that have arisen in the United States since the war. These conditions in regard to labor, transport, and finance will for a long time prevent values falling considerably. That a wide margin exists between pre-war prices and those ruling to-day is very true, and it is equally true that substantial reductions will be imperative before the trade can be said to be on a satisfactory footing. Post-war conditions, however, in this trade are so very different to what were experienced before the war, that rapid movements in values of imported goods are practically ruled out.

The persistency with which freights were maintained up till about the end of last month, combined with the equal persistency of British buyers not to purchase, had begun to make an impression on the minds of those who were most sanguine regarding prices. It seemed as if spot values in Great Britain would never be brought up to the level which was necessary to induce further business. But the substantial weakening in the freight market has practically set at rest any doubts about free-on-board values, and the only fear is that shippers will overdo things and endeavour to get the benefit of the cheaper freights. So far, for ordinary specifications there is not much change. Great varieties in prices are to be seen, for as the minimum figure fixed by the Exporters' Associations have long since been exceeded. Sellers who have unfavorable lots to dispose of are able to reduce their quotations if they want to clear. At the same time, those with good assortments are taking full advantage of their opportunity.

Importers in London are by no means anxious, with a dull spot demand and a possible fall in the timber freight market at no distant date, to enlarge their stocks. Freight rates are easier, but so far the long-expected fall for timber carriers has not been experienced. A little contracting has been done for shipments for next year, and it will come as a surprise to those who are expecting cheaper wood

to learn that f.o.b. prices are somewhat above those asked by shippers for prompt loading.

During the last fortnight there have certainly been some signs of a drop in freights. America is leading the way in this direction. During the last few days a reduction of 10 dollars per milli. has been made in rates to the Orient. This is a very big concession and may pave the way to a larger business from the Pacific side. Unfortunately, rates from the White Sea and Baltic have not dropped to such an extent, though there is no reason why they should not. They are far too high at present.

If shipowners can afford to take such a big reduction for American and Canadian cargoes, there is no reason why they should not be able to do so for European cargoes. Fortunately, things are now moving in the right direction for charterers in the timber trade. New boats are continually being put on the water, and many steamers formerly running for Government account are now being released and getting back to their normal business.

A firm in Manchester has purchased in Canada 25,000,000 cubic ft. of white pine logs, at a reported price of over one million dollars, and it is expected that the entire quantity will reach consumers by way of the Manchester Ship Canal.

The collapse in freights has tended to cheapen the price of floorings, but up to the present it has not stimulated business. In various centres, such as Hull, Manchester and London there can still be purchased plenty of battens at sufficiently reasonable prices to permit of planing, and selling at figures which easily compete with the imported article.

It is probably from this cause that the Swedish and Norwegian stocks are somewhat neglected. The Norwegian exporters are still quoting from £44 10s. to £45 10s. c.i.f. to London; also West Coast ports, but with little response. Swedish quotations are around £38 per standard f.o.b. basis for 1 x 6½/7 p.e. and with freights to the East Coast at £7 per nominal standard, or round about £5 15s. for the actual standard. The c.i.f. cost is very close to the Norwegian, it not being overlooked that the Swedish exchange is against this country to the extent of 20s. to 30s. per standard.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Business Quiet in Montreal with Firm Prices

Business in Montreal is dull in nearly every section of the lumber trade. At the same time prices are holding firm. The quietness is due to the usual summer lull and also to the uncertainty as to the railway situation. The subject has been under consideration of the Montreal Lumber Association.

There seems to be a general opinion that the railways have no other option than to ask for increased rates in view of the higher costs forced upon them. Traders naturally do not favor these increases, as they mean dearer lumber, and a tendency to restrict the use of this and other building material. An opinion is expressed to the effect that some classes of railway employees are overpaid, and that it is about time a halt was called to the constant demands for higher pay.

There is little or no alteration in the car situation, which is a great handicap to the prompt shipment of lumber.

The demand from the States is slow, although it is expected that there will be a revival in November or December.

The total value of building permits issued by the city for the month of July amounted to $1,105,785, as against $1,484,999, for the corresponding month last year. The total value of permits for the first seven months of this year was $9,660,029, as against $4,372,423 for the same period last year.

Lath is quiet, with a better supply of the wood.

The B. C. section is inactive, the demand being off for the time being.

Pulpwood is fetching very high prices, the supply being limited. The pulp and paper mills are turning their supplies of lumber into pulp, the high prices obtainable for this and for paper, making it more profitable to use the lumber for this purpose.

A fair amount of lumber is being shipped to the United Kingdom. The long expected reduction of rates is new in effect, the liners quoting 200s. per standard instead of 300s. The competition of tramps has forced this reduction, the liners finding that the bulk of the freight was being placed with tramps. It is reported that offers by the latter have been made as low as 175s. The British markets are dull, but if the housing schemes go through there should be a steady consumption of the large stocks.

Overseas Shipments from Quebec Show Big Change

There has been an appreciable change in the shipping activities at the port of Quebec from July 25th that have caused a large shipment of sawn lumber and timber to the United Kingdom, apart from the wooden goods previously shipped and referred to in the last report published in the "Canada Lumberman." All local exporters are sharing in the business. The brisk business now being experienced is due to the number of ocean steamers coming here and the drop in the rate of freights initiated by the tramp steamers. The freight rates have dropped from 300 shillings to 200 shillings per standard on sawn lumber, with a proportionate decrease on timber. Local and United Kingdom export and United States shipments indicate a brisker trade with the possibility of a further reduction in freight rates. Lumber and timber merchants consider that the present reduction, that should have taken place long ago, is not yet sufficient, and give credit to the tramp steamers for the decrease.

Besides vessels which sailed last week for the United Kingdom the steamer Orthia is at the Louise Docks taking on a full cargo of timber and deals for Greenock. The Government merchant marine steamer, Canadian Ranger, sailed lately with half cargo of deals for Liverpool, and the steamer Grampian Range, booked for Manchester, is now loading with half cargo of timber and deals. The steamer Cairndha is now loading for transportation to Newcastle and Leith. The C. P. O. S. will leave on her eastbound trip with part cargo of deals, and the Empress of France, due to arrive at Quebec soon, will carry part cargo of deals. Thus, it will be seen, that shipping activities at the port of Quebec, in regard to the lumber and timber trade, have improved.

The pulwood business at Quebec in connection with movement to the United States, is practically at a standstill on account of the shortage of cars. The interests here make the statement that they have large orders to fill for United States pulp and paper mills for peeled and rough wood, but cannot forward the goods for want of cars. They claim that the Quebec pulp and paper mills, who pay an advance in car rates over the pulpwood exporters, are favored. The pulp people are becoming nervous over the situation, feeling that they will not be able to obtain the car service needed for movement until after the railway rates are increased by thirty per cent, which will react upon the mills who have made their contracts under the present rate of transportation, and will have to bear the burden of the increase.

The reference made in the last issue of the "Canada Lumberman" regarding the grafting in the matter of freight cars, has caused considerable comment in the trade circle. In making his rounds of the offices of both the shippers of lumber and pulpwood to the United States, your correspondent was amazed to learn that the system was not confined to one or two businesses, but was general.

A member of a leading Quebec firm, who ships largely in lumber to the United States, informed the "Canada Lumberman's" representative that the practice was well known to the trade and very general. Two pulpwood exporters to the United States market were more outspoken and enlarged on the outrage. They said they not only had to pay $5 per car to the representative of the American divisional superintendent or traffic superintendent, but had to bribe conductors of freight trains to secure cars. In explanation the "Canada Lumberman's" informants stated that, by passing the conductors of cetrain railways hauling empty freight cars, they would induce them to uncouple and leave two or three cars and have them on the sidings where they were required, and then proceed on with their trains. How the conductors later got away with the checking of such cars on reaching their destination, they never heard or enquired. They said the practice of graft in connection with the movement of Canadian cars from Canada and moved over the border, for instance at Rouse's Point, though strictly prohibited by the payment of $5 on each car loaded with pulpwood, was still in vogue. The imparters of the above information admit that they were just as guilty as the railway men who imposed the graft and, in justification, declared that they were compelled, and are, in a large measure, still compelled to participate in the practice; otherwise they would be stalled in their business and the supply of the demand of their customers in the United States.

The exposition now made it too serious to pass unnoticed and calls for rigid investigation and exposure of the guilty persons.

MILLMEN

and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented **Steel Water-Jacket Furnace.** This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

Do you, or do you not want to save half your coal? It's up to you. Ask for particulars.

General Demand Improves at Ottawa—Prices Firm

Symptoms of an upward drift, indicative of good fall and future business, evidenced themselves in the Ottawa lumber market during the opening period of August. Prices remained absolutely firm, and after several weeks of dropping away, the demand began to come back, particularly in the white pine grades. Spruce stocks, which had been dragging, and for which a drop in prices had been looked for, remained firm as to price, though the demand did not show any great signs of improvement.

The market, as a whole, during the latter days of July and the first part of August, appeared to take an unexpected upward swing, which certain of the trade interpreted as a possible meaning that prevailing high prices for lumber were not fictitious, but were based on increased manufacturing costs and the advance cost of doing business.

While the demand and the car situation showed improvement, those in the inner circles of the trade saw certain contingencies which might arise, which would effect the demand seriously. One was the cement shortage, the other the possibility of the award of the Board of Arbitration in connection with the dispute of the members of the Inside Woodwarkers and Factory Workers Union, which was heard before the Board in July. In certain labor circles at Ottawa it was predicted that if the award of the Board was not satisfactory to the workers, that they would again go out on strike. If they do so they will again tie up the woodworking factories and stop the production of stocks and products of such plants which are needed for building operations, the extent of which, in turn, reflect on the domestic demand of the market.

The idea that existing high prices for lumber would continue to prevail in the Ottawa Valley for several months to come, was fairly well established, by information given to the correspondent of the "Canada Lumberman" to the effect that the sawmill cut of the Ottawa Valley mills this year will be shortened, and that probably the gross cut will be some millions of feet shy. One of the big six biggest producers of sawn lumber, Shepard and Morse, closed down its sawmill for the season in late July. It was an exceptional happening, and was not due to a shortage of mill labor, but of logs.

Though a good labor supply for the sawmills appeared available there were indications that the general cut of the valley would not be up to that of last year. Some mills made every effort to exceed last season's output, but were seriously handicapped by low water in their driving operations and a shortage of logs at their mill ponds. The majority of the sawmills in the Ottawa Valley continued to operate, but the extent of their operations was nowhere near those of the pre-war years, when a log saw could be heard running just as well at night as at high noon.

That prices had shown no tendency to come down during the crucial summer months was accepted as a good omen by most of the trade that present rates were not going to recede. The expected short cut of the sawmills, together with a growing demand indicated that quotations at least would hold firm for some time.

Foreign cars for lumber shipments became more plentiful, but shipments on contract orders were rather slow.

The outlook for future building operations at Ottawa continued to remain good outside of the shortage of cement, which temporarily stopped construction on some buildings. The greater volume of building, especially commercial, went steadily ahead, and prospects were that future business in the building lines would be good if cement could be secured. For the month of July building permits had an estimated valuation of $488,936, there being 54 permits issued. For the first seven months of the year, permits were issued as follows: January $79,010, February $57,500, March $102,775, April $306,710, May $549,590, June $224,600, July $488,936. Total $1,807,021.

The labor situation with the local sawmills remained good and workmen were reported to be fairly plentiful. The woodworking factories continued operation up to the end of the first week of August, the union workers who went out on strike on June 12th having agreed to return to their work pending the decision of the Board of Arbitration hearing their dispute. The manufacturers did not appoint a representative to the Board, but one was named by the Department of Labor. The woodworking plants and companies did not agree to become parties to the board, nor did they in any way bind themselves to abide by its award. Even if an award is brought in unfavorable to the woodworking plants, the Department of Labor, under the Industrial Disputes Act has no authority to enforce it.

Labor for the woods camps, which are now being put in by several of the companies, was reported to be scarce, but it was believed by the heads of the companies that it would continue to grow more plentiful after the haying season had finished and part of the grain crop had been harvested. Some of the companies have increased their wages for woods labor, paying the ordinary bush hand from sixty-five to seventy-five dollars per month, with cooks and other help as high as $125 for the same period.

Lath and shingles continued to remain in fair demand with stocks low, and prices remaining pretty much as they were during the opening period of July.

Empire Timber Exhibit was Success

The Empire Timber Exhibition, held in London, England, July 6th to 24th, proved of exceptional interest to lumber importers in the United Kingdom, and there can be little doubt but that Colonial shippers will greatly benefit as a result of this "trade within the Empire" movement.

The exhibition was arranged by the Department of Overseas Trade—a department of the British Government Board of Trade. This important branch has been established with the sole object of assisting British and Colonial trade. The object of the Empire Timber Exhibtion was to bring into more general use the numerous timbers of the British Empire.

Britain's dependance on foreign countries for her timber supplies, prior to the war, is remarkabe, but it is significant to note that when the foreign sources of supply were cut off during the war recourse was had to Empire-grown products and with very gratifying results. The introduction to the official catalogue encouragingly remarks: "It is reasonable, therefore, to suppose that better use may also be made of them under peace conditions."

The stand of the Canadian Government was particularly well arranged; it was replete with specimens of every kind of lumber cut in Canada, together with a generous display of manufactured products and, under the direction of Mr. Wm. B. Stokes, of the Forest Products Laboratories of Canada, McGill University, Montreal, visitors were able to command the most authentic information possible regarding the Dominion's lumber and woodworking industries.

Alongside some specimens wire wound water pipe made in British Columbia of Douglas fir was an Elizabethan wooden water pipe lent by the committee of the Guildhall Library, City of London, and which is still in a good state of preservation; although of primitive construction the latter evidenced the fact that wooden water pipe will stand the test of time. Models of frame houses, which are shipped ready for construction, rotary-cut veneer, wood pulp and wood pulp products, including ladies' hose, and a number of other products too numerous to mention were admirably displayed.

Mr. Wm. B. Stokes has kindly promised to furnish readers of the "Canada Lumberman" with a special article calculated to be of great value to Canadian lumber interests, which will be published in an early issue.

Borneo Timber Will Be Developed

Two large British companies operating in the far East have consolidated their projects for further developing the timber resources of British North Borneo. The contemplated program of the new company thus formed to exploit more extensive concessions will ultimately entail an expenditure of from $2,500,000 to $3,750,000 gold. This development is expected to affect the entire timber and lumber trade of the far East, and perhaps quite appreciably that of the United States along the Asiatic coast.

Woman Will Recover Sunken Logs

Sunken treasure in Lake Erie is the goal of Mrs. Margaret C. Goodman of New York city, formerly of Detroit. But this treasure is neither gold nor silver. It is just logs. Nevertheless these logs constitute a fortune—they are a cargo of walnut and white oak logs sunk in Lake Erie in 1859, when a three-masted schooner carrying them from a Canadian port went down with all hands save one.

Mrs. Goodman is the only woman in the world, it is said, engaged in deep sea salvaging. She organized the company that raised the copper cargo of the steamer Pewabic, sunk off Thunder Bay, near Alpena, before the Civil War. One single piece of copper in mass form recovered from the Pewabic was sold for $3,500. The amount recovered ran into a big total.

Spraying the Pulpwood Block Pile

Following a recent visit of Mr. T. J. Hoxie, a special Investigator of the Mutual Insurance Company, and an expert on the fungi that attack pulpwood in storage, Laurentide Company is making experiments with spraying the block pile to prevent fire. This spraying is now being done continuously to avoid any fire that a chance spark might start in little piles of sawdust, bark, or chips that accumulate. Fire protection apparatus is now available in the block pile yard which is believed can cope with any ordinary fire that might become ignited, but the spraying sytsem now in use will probably give little chance for its employment.

The Leigh Lumber Co., 33 Richmond St. West, Toronto, was recently registered.

The Continental Bag & Paper Co., Montreal, have started the clearing for their new mill and camp site near Sudbury, Ont., which will cost about $50,000.

The North American Lumber and Supply Co., Limited, Toronto, Ont., have been authorized by supplementary letters patent to increase their capital from $100,000 to the sum of $1,000,000.

The Algonquin Lumber Company, Limited, Toronto, have been incorporated to conduct a general business in the manufacture and dealing of lumber, timber and other forests products. Capital $100,000.

Lightning recently struck the chimney stack of the Waugh planing mill at Niagara Falls, Ont., tore off the top and opened a crack all down the side. A heavy steel furnace door was thrown a distance of fifty feet. No one was injured.

The Cook and Bird Sawmill, situated on a lake about five miles from the Mattagami river in Northern Ontairo, was recently destroyed by fire. There was no insurance on the property. The mill was lately overhauled and put in first clash shape.

The Hope Lumber Company, Limited, Thessalon, Ont., was recently incorporated to take over the businesses formerly known as the Hope Lumber Co. and the Hope Operating Co. and to manufacture and deal in lumber, timber and other forest products. Capital $750,000.

The Fort William Pulp & Paper Co. will proceed at once with the erection of their new plant on the Mission site at Fort William. The groundwood pulp plant will be proceeded with at once and the sulphite and newsprint mills will be constructed afterwards. The buildings throughout will be of concrete and of the most modern type.

J. F. Lillicrap, of the Kawatha Lumber Co., Lakefield, says that they have found a ready market for all their lumber purchased, and that prices are steady. They have sold their hardwood stock, but have considerable pine and hemlock for the autumn trade. Mr. Lillicrap is of the opinion that prices will hold firm while there may be an advance in some grades.

An extra provincial license has been granted to G. H. Mead Co. of Dayton, Ohio, a corporation created in the state of Ohio to buy and sell pulp and paper and other products connected with the pulp and paper business. The company is empowered to invest the sum of $100,000 in its operations in Ontario, and has appointed J. G. Gibson of Toronto, as its attorney.

The Armstrong Lumber Co. have completed a fine new sawmill at Lakefield, Ont. The size of the structure is 24 x 75 on the main floor and the plant is operated by hydro-electric power. The company have about 36 square miles of timber tributary to Lakefield and about three-quarters of a million feet of logs now at their mill, which began cutting a few days ago.

A charter has been granted to the Century Bag Holder Co., Limited, with a capital stock of $40,000, and headquarters in Toronto, to manufacture, sell and deal in bag holders, bags, boxes, chests, wrappers, packing devices made of wood, paper, fibre, metal and other materials. Walter F. Wormley, Thomas H. Goldring and others of Toronto, are shareholders in the new enterprise.

Among the new incorporations in Ontario is Kennedy Car Liner and Bag Co., Limited, with head office at Woodstock, Ont., capital stock of $100,000, to manufacture, purchase and sell paper of all kinds and to make car liners, paper and other products, bags and covers for covering all kinds of furniture, manufactured goods and other products. The company recently located in Woodstock, where it expects to start operations in the near future.

John Stirrett and Sons, lumbermen, of Port Arthur, have acquired twenty acres and buildings formerly belonging to the Port Arthur Waggon and Implements, Limited, at a price of $270,000, which they are paying the liquidators, the Toronto General Trust Co., and the Imperial Bank. Within sixty days the newcomers will have 125 men working in the plant which has been idle for some time. Stirrett & Sons contemplate the establishment of a modern box factory to be operated in conjunction with their mill and also a pulp plant.

John Duignan, of Peterboro, who purchased the Kelly limits in the township of Harvey, Peterboro County, some time ago, has taken down the Kelly mill at Bridgenorth and removed the frame to Lakefield, as well as some of the machinery. New equipment has been added and also new boilers. The foundations of the new building have been put in and the structure will be about 40 x 90, along with new boiler house. It is said that the plant will be up-to-date in every way, and that it will cost about $30,000. Logs for the operation of the mill will be taken out this fall and winter.

The Spruce Falls Co., Limited, with headquarters at Kapuskasing, Ont., and a capital stock of $7,000,000, divided into 70,000 shares of $100.00 cash, of which 20,000 are preference shares, have been granted a charter to manufacture, sell and deal in pulpwood, mechanical and chemical pulp paper, etc., and to carry on the business of paper manufacturers, lumbermen, timbermen, etc. This is the company which is erecting a 150-ton pulp plant and newsprint mill of similar capacity at Kapukasing on the National Transcontinental Railway, which is the scene of the former soldiers' colonization scheme. The work is to be proceeded with at once.

Eastern Canada

Cote & Trottier, Ham, P.Q., have registered as lumber dealers, with A. Trottier as proprietor.

The sawmill of James Mesner & Sons, at Chipman Brook, N.S., was recently wiped out by fire.

The lumber yard and general store of Robinson Limited, Millerton, N.B., was recently destroyed by fire.

Baie St. Paul Pulpwood and Spoolwood Company, Quebec, P.Q., was recently incorporated to manufacture and deal in lumber, timber and forest

products of all kinds. Capital $19,300. L. A. Cannon, K. C., and P. Taschereau, both of Quebec City, are two of the incorporators.

Tanguay & Fils, Cap de la Madeleine, P.Q., have been registered as lumber dealers and contractors.

The planing mill of the Canadian Woodworking Co., Limited, Yarmouth, N.S., was recently destroyed by fire.

Gustave Champagne, Montreal, P.Q., has registered as a pail manufacturer under the name of Cie La Daisy.

A. Gigaire & Frere, St. Flore, P.Q., were recently registered as lumber dealers. A. & A. Gigaire are the proprietors.

The partnership known as J. G. Ewing & Sons, Melbourne, P. Q., proprietors of a sash and door factory, has been dissolved.

The Gloucester Lumber & Trading Co., Bathurst, N. B., was recently registered with Wm. G. White and George A. Rogers as proprietors.

The New Brunswick Pulp and Lumber Co., Campbellton, N.B., was recently registered with John L. Wootten and E. R. Cromwell as partners.

The Gloucester Timber & Trading Co. have bought the James Rogers farm at West Bathurst, N.B., for $44,000. The farm is a very large one.

The Quebec Government has nominated J. A. Gagne as agent of lands and forests for Peribonka, and J. A. Lepage as agent of lands and forests for the lower Ottawa.

The annual timber sale of the department of lands and mines of New Brunswick, which is to take place on August 25, will be smaller than it was last year.

John Breakey of Breakeyville, Levis County, Que., who is a well-known lumberman, intends erecting a large pulp plant in Levis. The plant will be driven by electric power.

The plant of J. P. Abell, Fortin Co., Limitee, Montreal, P. Q., box manufacturers, was recently destroyed by fire, causing a loss esimated by an official of the company at about $25,000, partly covered by insurance. The origin of the fire is unknown.

Morissette & Levesque, Limited, Quebec, P.Q., have been incorporated to manufacture and deal in lumber, timber, pulpwood and other forest products. Capital, $99,000. Two of the incorporators are O. C. Morissette and J. E. W. Levesque, lumber merchants, both of Sherbrooke, Que.

The Juniper Lumber Co., Juniper, N. B., was recently incorporated to conduct a general lumber business, manufacturing and dealing in lumber, timber and pulpwood. Capital, $49,000. Two of the incorporators are W. M. Flemming, lumberman, Juniper, N. B., and W. Love, lumberman of Forestson, N. B.

The Bloomfield Lumber Co., Limited, Bloomfield, N. B., was recently granted a provincial charter to take over the property and rights of the business known as the Dolan Estate and to manufacture and deal in lumber, timber and other forest products. Capital $5,000. Two af the incorporators are D. J. Boyce and F. L. Rodderick, both of St. John, N. B.

The Fraser Company, Ltd., of Chatham, N.B., which recently secured the plant formerly owned by the Dominion Pulp Co. of New Brunswick, is making a number of changes, which, when completed, will put the plant in first class condition and will slightly increase the production. The changes include alterations in the boiler house, remodelling of the wood room and the installation of two additional American barking drums which have been bought within the past two weeks.

The spruce-bed worm situation is a very serious one this season in and around Newcastle, N. B. M. B. Brown, entymologist of the Dominion department of agriculture, has been examining the forests on the Southwest Miramichi river and reports the worm is to be seen in large quantities at present; practically all the balsam fir and at least fifty per cent. of the spruce have been killed or injured. Complete destruction of this is not only possible but probable, if the ravages of this pest are not controlled.

Western Canada

The Beaver Lumber Co., Limited, have opened branches at Kamsack and Verigin, Sask.

The Ptarmigan Lumber Co., Limited, Ptarmigan Creek, B. C., were recently granted a Dominion charter.

A. C. Munroe & Co., Plumas, Man., was recently formed to take over the lumber business formerly conducted by A. C. Munroe.

The Saskatchewan Lumber Co., Limited, Crooked River, Sask., was recently granted a provincial charter with a capital of $500,000.

The old shingle mill, the property of the Ontario Slocan Lumber Co., was destroyed at Slocan recently. The loss is estimated at about $2,000.

The Hardwood Chair Co., Limited, Vancouver, B.C., were recently incorporated to take over as a going concern the plant and assets of the Hardwood Chair Co.

The Mayo Lumber Co., which operated some years ago in the Chilliwack and Rosedale districts, is now running an extensive plant near Duncans, V. I., where it is employing over 90 hands. The mill has a capacity of 75,000 feet per day.

Chase Creek Lumber Company, Limited, Blackie, Alta., were recently granted a federal charter to manufacture and deal in lumber, timber and other forest products. Capital $100,000. Two of the incorporators are O. W. Bowlus and W. H. Farrell, farmers, both of Blackie, Alta.

Last year the old Fernie Lumber Company mill at Fernie, B.C., owned then by Sandy MacDougall, was sold to J. J. O'Neill and J. Irvine, two timber operators from Spokane, heavily interested in the Kootenay. The new owners have not only re-named the company, and re-organized it under a new name, the White Spruce Lumber Co., Ltd., but they have transferred the mill to a new site approximately four miles north-east of the former location. This was done to provide better facilities for transporting their log supply from the woods to the mill.

The Bureau of Labor & Industries of Regina, Sask., has received an offer for pulpwood at a price of $12.00, f.o.b. cars, Fort Frances. An inquiry will now be instituted as to the freight rates, points of shipments and other features with a view to finding a market, if possible, for the great quantities of this wood being cleared from the settlers' holdings in the northern part of the province. At present this wood is being destroyed and the market would prove a source of revenue for settlers during the years the land is being cleared and before a crop can be secured.

Dinner Time and Everybody Happy

"Come and Get it" sounds good to the men in a Lumber Camp when they know that the food is well-cooked, plentiful and varied.

A variety of well-cooked food does more than any other thing to keep men well and happy. "The same old thing" meal after meal has started many an exodus from camp, but the camp where the food is best usually has little difficulty in getting all the men needed.

The Cook who is supplied with plenty of Klim does not worry about the "sameness" of the food getting on the men's nerves. He is able to prepare plenty of nourishing dishes which KLIM makes possible.

KLIM is pure powdered separated milk. It is compact in bulk, easy to ship and store. Keeps fresh and sweet until entirely used. It requires only a cool, dry place for storing.

KLIM is packed in 10-pound tins, six tins to the case. One pound of KLIM will make four quarts. When making up your list of supplies estimate your requirements on this basis, order from any wholesale supply house.

Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So:

1—Gives the sawyer the easiest kind of control of valve.

2—Hand lever stays put, making them safe against any jerk or kick of valve.

3—Gives the sawyer every confidence in handling valve.

4—Will prevent accidents—is easier on the nerves and carriage runs steadier.

5—Water flowing into valves from foaming boilers does not fret the sawyer.

6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?

PRESCOTT'S VALVE CONTROLLER

Waubaushene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel **through nearly three hundred lineal feet of** pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is **not the slightest jar or vibration to be felt,** no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,
(Signed) D. B. Anderson,
Chief Engineer,
The Georgian Bay Lumber Co., Ltd.

William Hamilton Co., Limited

Agents: J. L. Neilson & Co., Winnipeg, Man.

LIONROYAL BABBITT

MADE IN CANADA

We warrant that no other Babbitt at the price will perform as well in so many different classes of bearings and are ready to prove this in any case by trial installations in competition with any metal of its type.

The secret of its success is in the method of its alloying. It is produced under the Stanley Process, which is controlled exclusively by us throughout the Empire. Try it and be convinced.

We solicit your enquiries. Write for our catalogue.

Canada Wire & Iron Goods Co., Hamilton

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "Rotex"

Write for copy of our catalogue, "Refractory Efficiency Engineering."

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Yates

Heavy Duty Resaws

There's no need to present arguments to show need of greater production at this time. The pressing question is, "HOW?"

The Resaw has shown its ability to increase production and lower costs. There is no better or more complete line of resaws than the Yates V-series. They are used by the largest lumber producers all over the country.

There are three sizes, the V-5, V-6, and V-7, that it will pay you well to investigate.

Gasoline Power For Loading and Skidding

By actual test the little machine shown in this illustration will handle any log of the sizes commonly found in Ontario and the Eastern Provinces, including Newfoundland.

The Six Horse Power size, as shown, is the size commonly used, but for those who desire a good reserve of power for emergencies we build the Ten Horse Power size.

These machines are made with either ONE Drum, or TWO Drums, to suit the work, and with either BELT DRIVE, as shown, or with GEAR DRIVE.

The price is moderate, the weight of the machine is little, but it does big work.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

Proved Service Better than Promised Service

Accept for yourself only those articles that have proven their worth when used under similar conditions. Two outstanding articles designed and manufactured by McClary's that have given long years of service under the most trying conditions are the

"Algoma" Steel Range

and the

"Camp Comfort" Heater

Both are sturdy, reliable, made right and bear no weak elements that collapse under strain. They carry the approval of every chef and lumberman.

The "Algoma" is a large capacity Cooking Range—built in three body sizes with various changes in cooking surface. Will not buckle or warp with hard usage.

The "Camp Comfort" has a tremendous heating capacity. Holds large chunks of wood and gives direct heat to the atmosphere. Will add cheer and comfort to bunkhouses and camps of all descriptions.

Our nearest Branch will be pleased to furnish any inquiries with full particulars without obligations.

Sturtevant

REG US PAT OFF

PUTS AIR TO WORK

The Whirlwind that Sits on a Knife

and does as much work as all the men in your shop—who are in a much more comfortable position!

For no matter how hard they work at the machines—no matter how many chips, shavings, and how much dust and powder they make—a

Sturtevant

(TRADE MARK)

PLANING MILL SYSTEM

with its powerful draft right at the tool edge, carries them like lightning away outside, giving the workman every chance in the world to turn out his best work.

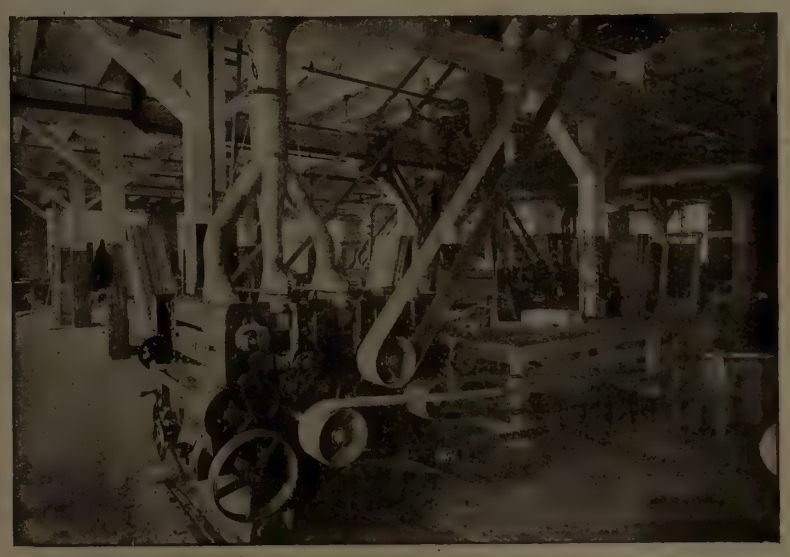
A Sturtevant Planing Mill System

—keeps the work nice and clean at all times

—leaves the air free from dust and powder, and wholesome for the workers to breathe

—allows no refuse to gather and form a fire risk

—prevents all litter which might work into the machines.



Special Bulletin No. 261 C tells of the benefits of Sturtevant Planing Mill Systems now in use by many mills

Strength and Dependability

There is only one Moreau Barker. The best recommendation we can give for this machine is the name **Bertrand** which goes with it.

The Moreau Barker is proving its immense value to many lumbermen for speed, economy of operation and sturdy construction.

Wherever this machine is working its reputation is sustained. It insures the owner constant service, free from breakdowns, and gives continued production.

LOGGING CARS

Jno. J. Gartshore

58 Front St. West, Toronto

Where the "Bell" Shows Supremacy

Sizes 2 to 24 tons

up steep grades on sharp curves over rough roadbeds

It is here that the advantages of the geared locomotive over the direct connected type is shown.

Another point in favor of the "Bell" is its cost; when compared with the direct connected locomotive it will be found to be much less for a given amount of tractive power.

The cost of rails is often reduced one-half. The number of ties required is very much less.

The "Bell" operates on cheap fuel oil, distillate or kerosene, and can be easily handled by one man. Further particulars gladly furnished.

Bell Locomotive Works Inc.

INCLUDE THESE ARTICLES

Among Your Saw-Shop Equipment

For cleaning laps and solder preparatory to brazing band saws

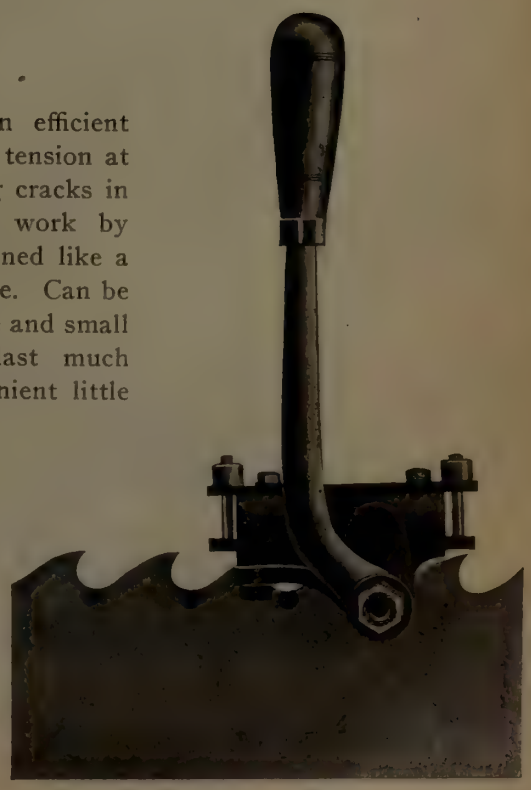
"BRAZINE"

will prove itself highly efficient in every respect. Brazine is a scientific chemical compound, the invention of an expert saw filer who recognized the need of such a preparation.

We shall be pleased to send a try-out bottle to anyone who has not yet used it.

Price in Canada, $3.00 per 4 oz. bottle by mail.

This cut illustrates an efficient device for equalizing the tension at the gullet and preventing cracks in band saws. Doing the work by pressure the dies are peened like a hammer and very effective. Can be used on resaws both large and small and the tension will last much longer. A handy, convenient little tool for any filer.
Sent on approval.



GeBott Manufacturing Company

RESPONSIBILITY

At night—when the people of your town are taking recreation—in places of amusement or in their homes—this is the time when the safety of your Municipality weighs most heavily on those responsible for its protection from a great fire.

The unexpected fire comes to every town and too often the distress and loss of life and property, left in its wake, cannot be reckoned.

The conscience of those responsible is clear if a fire alarm box is at every main street intersection. The

Northern Electric
GAMEWELL
Fire Alarm System

is the proven quickest and most positive known means of alarm. The telephone cannot compare with it for speed and accuracy. Instantaneous in its action it utilizes precious seconds—no time is lost. In most cases, the fire is under control from its infancy.

The fact that 99% of the fire alarm systems in Canada are Northern Electric Gamewell has saved the Dominion untold thousands of dollars and many lives.

If we can be of service to you in this important matter, call on us.

DUPLEX TRUCKS

BUILT FOR BUSINESS

Patented Spring Suspension prevents damage to Radiator

Motor Meter set in Radiator shell prevents loss by theft.

Two Wonderful Runs That Show the Remarkable Stamina and Power of the Duplex Limited

Duplex Limited carrying 3060 pound load from Los Angeles to El Centro via San Diego, 267 miles in 8 hours and 26 minutes. Los Angeles to San Diego, 132 miles in 3 hours 49 minutes. San Diego to El Centro, 135 miles in 4 hours 37 minutes. Average speed 34 miles per hour. Entire distance without stop. No relief driver. Rain from Santa Ana to Oceanside. Speed limit observed in all towns in transit.

Duplex Limited carrying 3750 pounds of potatoes from New Orleans to Baton Rouge, 124.6 miles in 6 hours 55 minutes running time. Elapsed time 10 hours 10 minutes with 3 hours 15 minutes lost by ferry delays. The motor never missed and the water in radiator boiled only once and that after a 12 mile pull through "gumbo." After a 46 mile run in 2 hours to Port Allen the motor meter registered "warm."

HERE in this Duplex Limited is the definite practical achievement of the motor truck industry's aim to produce a truck that could freight 1½ to 2 tons at high speed.

This Duplex Limited is no mere city delivery wagon—but a strong rugged *road truck* capable of hauling 3000 to 5000 pounds over city or country roads, and doing it on *schedule* time.

Designed and built for pneumatic tires—not merely equipped with them—the Limited travels easily and smoothly enough for even very fragile freight. Minimum vibration and shock saves wear and tear—and adds longer life to the truck.

Its motor is wonderfully rugged and powerful—and when turning over only about 1300 r.p.m. it drives the truck along at 25 miles an hour on high. Gear ratio is 5½ to 1 insuring high speed at minimum wear on motor and other moving parts.

Electrically equipped throughout—which means economy of gasoline as drivers will shut off motor when truck is not running.

The radiator is suspended in patented Duplex Spring Suspension—which allows ¼ inch sidewise and 1 inch up and down movement before radiator touches anything solid. Prevents damage to radiator solderings and eliminates the great source of radiator leakage.

Lamps equipped with Nitrogen bulbs are mounted on radiator to prevent bulb damage by vibration.

Motor meter made part of radiator shell to prevent loss by theft.

Ball bearings used throughout—engineering tests show it requires 29 times less power to move a given load when ball bearings are used. *This means a gasoline saving due to less friction.*

Special flapper valve in oil filler pipe keeps sand and grit out of oil reservoir.

From every angle of mechanical value and economical operation this Duplex Limited is a real truck—the very kind you have been looking for in your business.

Have the Duplex dealer demonstrate the Limited. It *makes good*—and will *cut your trucking costs and give reliable service.* Write for complete details.

If you have heavy hauling to do—write for booklets about the Duplex 4-Wheel Drive—America's Leading Heavy Duty Truck. "DUPLEX DOINGS"—The Truck Owner's Magazine sent free to all truck users. Address Dept. 121

Duplex Limited lifted clear of ground by wire around windshield frame. Strength of cowl means safety and less vibration.

Duplex Truck Company

Lansing • Michigan

One of the Oldest and Most Successful Truck Companies in America

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Dunbar Engine & Foundry Co.

WOODSTOCK, N.B.

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at $26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M.
Pulpwood, 246,282 cords.
Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

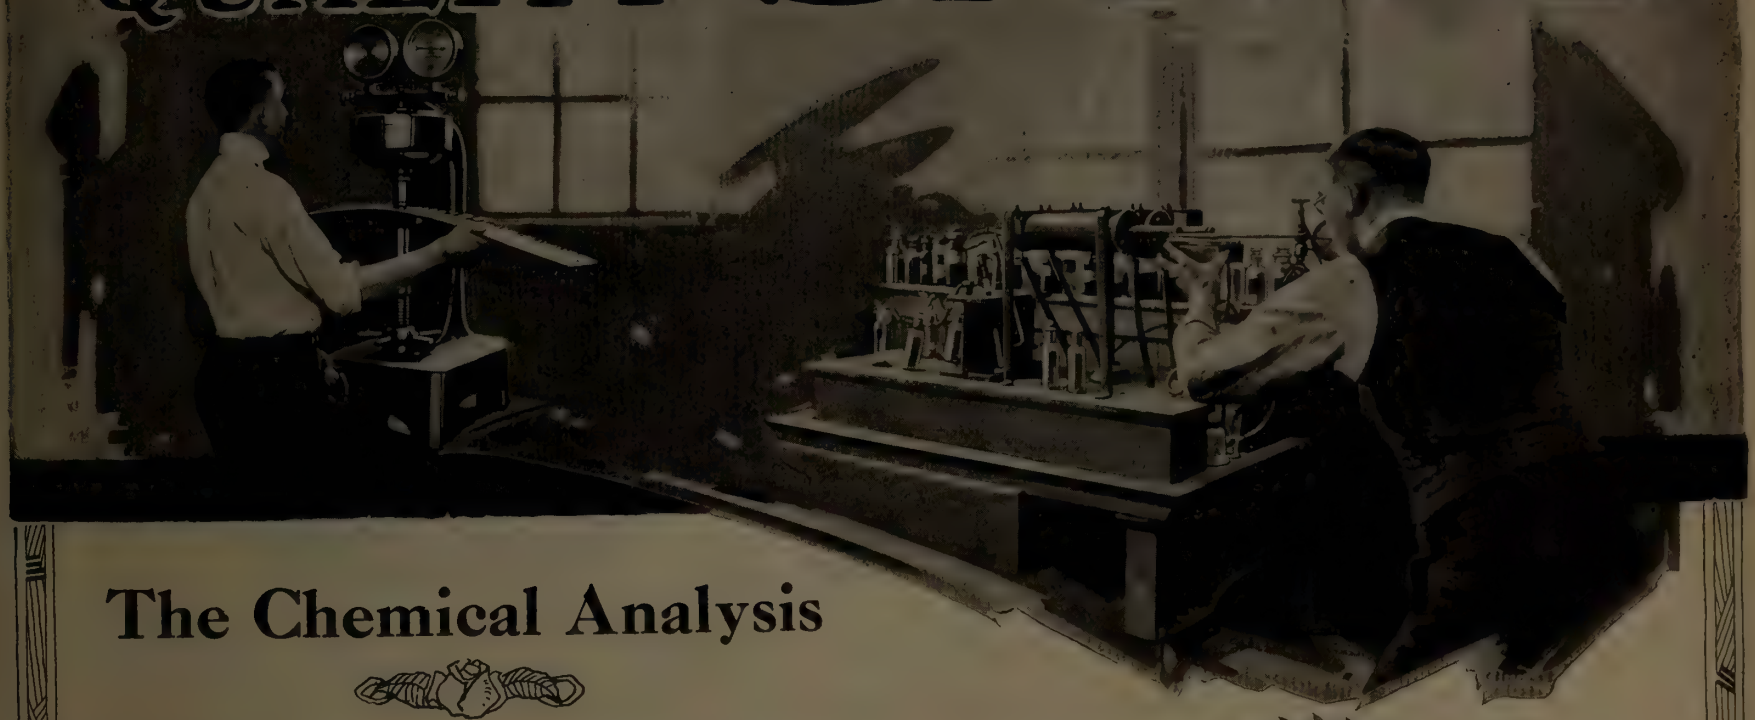
ATKINS STERLING QUALITY SAWS



The Chemical Analysis

Crucible steel making is far from an exact science. A large percentage of heats go wrong. If we made our own steel, we would be under temptation to excuse unimportant variations from perfection and work these "slightly off" batches into our products.

But we don't make our steel. We leave this to the greatest crucible steel makers in the world. And as we subject each saw plate from the steel makers to minute chemical analysis and physical inspection and test, we can be and are mercilessly exacting.

Our metallurgists see that no "slightly off" batches of steel are used in *Atkins Sterling Quality Saws*, therefore you can depend upon their uniformity and efficiency to give you maximum production.

Ask for latest catalog.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1¾ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

No. 1 Power Machines

Since January, 1920

Over 25 lumber companies from Nova Scotia to British Columbia have installed

Cyclone Vegetable Peeler

Most of these machines have already more than paid for themselves in economy effected in **labour and material.**

"Cyclone Peelers" which have been in constant use for over 12 and 14 years are still going strong.

We also carry Dishwashing Machines, Bread Slicing Machines, Meat and Food Choppers.

Write for Circular "L"

QUESTION No. 10

Why is it

that so few users of babbitt, give so little consideration to the alloying of the metal!

Content is, of course, an important factor in the manufacture of a babbitt, but surely no more so than the alloying. For, a babbitt that is not properly alloyed may lack homogeneity and be the cause of the babbitt squashing or creeping out; or it may contain hard-points that will score the shaft.

In the manufacture of SYRACUSE BABBITTS we alloy **scientifically** and with **exacting care,** assuring a babbitt absolutely homogeneous and free from hard-points.

For your very severest requirements, such as in your gangs, you should use

ALUMINUM GENUINE BABBITT

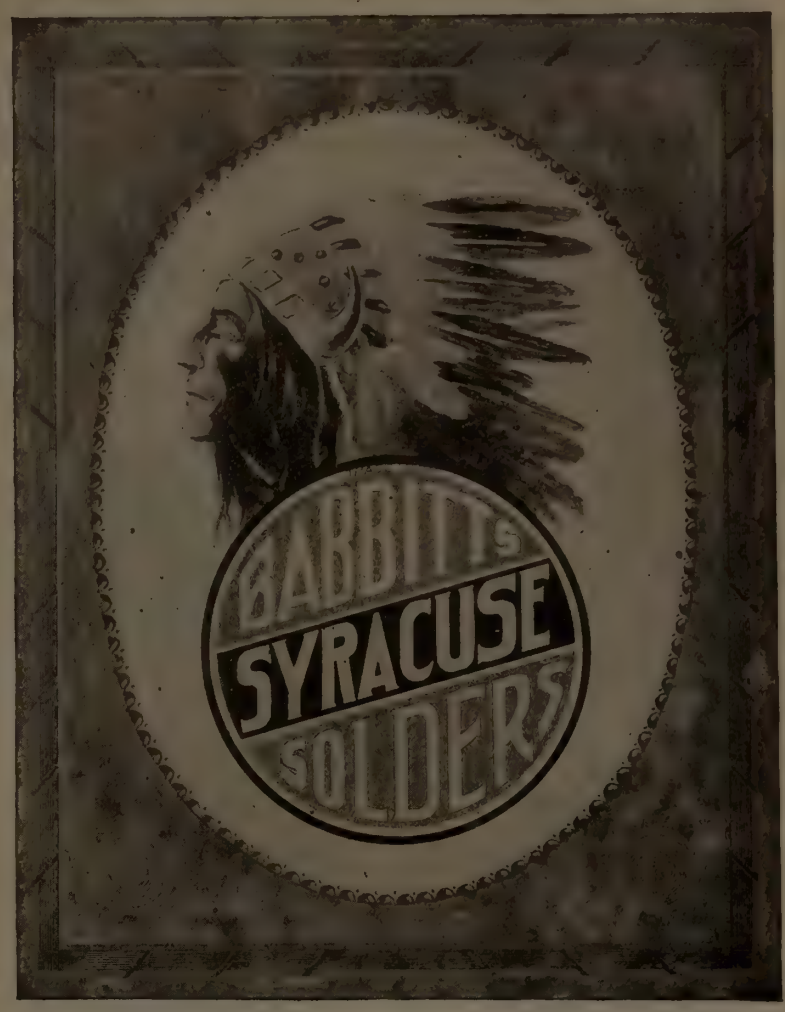
the babbitt of super-strength—the babbitt that has for years been peer in the lumber industry. Write for a sample.

United American Metals Corp'n

Makers of Syracuse Babbits

Diamond Street & Meserole Avenue, BROOKLYN, N. Y.

Babbitts, Solders, Phosphor Tin, Phosphor Copper, Antimony Tin, Lead, Copper, Spelter, Aluminum, Zinc.



The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

Make Saws Cut And Planers Hum

Your saws may be well filed, swaged nicely and rounded perfectly, but unless your mill's belting is correct you do not get an honest day's work from your machinery.

You will find potential assistance and an increased output by using Graton & Knight Standardized Series Leather Belting. This series is composed of a number of brands and types of belting standardized both in manufacture and application.

Why not avail yourself of the opportunity of calling in a G & K engineer and letting him analyze your power transmission. You incur no obligation for this service. Your power transmission must be right if your production is going to be right.

Every G & K Belt will give rugged service because it is built for this kind of service. Your saws will cut and your planers will hum a real tune when your plant is standardized on G & K Leather Belting.

LUMBERMEN'S EQUIPMENT

THE E. LONG MANUFACTURING CO. SAW MILL MACHINERY ORILLIA CANADA

The Machine for Rapid Output

Our 42 Standard Edger here shown is one familiar to millmen throughout the industry. Embodying, as it does, the best features that skill and money can make possible, it merits your closest investigation.

Made throughout of highest grade materials, and showing workmanship right up to the "Long" standard of efficiency. Supplied complete with front table, ready for operating, with rolls, boxes, shifting levers, quadrant, wrenches, etc., also three rolls with boxes for rear table.

The E. Long Manufacturing Co., Limited

Williams & Wilson Ltd. Montreal

An Edger for 6" Cants

You can put a 6-in. cant through this edger and know that it will come through edged to a hair. Edger carries 22-in. saws, 6-in. saw collars, leaving 7-in. clear saw blade, more than enough margin for 6-in. stock.

Mandrel is 3⅞-in. in diameter, the three bearings that support it are each almost 10-in. long—the rest of the machine is built in proportion. That's why Waterous New Champion Edgers can be crowded to the limit and will turn out full capacity, day after day, without straining.

Notice the feed rolls, two before and two behind the saws. They are machine fluted to give a firm, secure grip on the timber that holds it fast, but will not mar it in any way.

We build up-to-date Machinery for Sawmills of every capacity—circular or band Catalogues or request.

The press rolls are divided, too, making both sides of the machine independent of each other. It's a worth while feature, decidedly.

WATEROUS NEW CHAMPION EDGERS

are built with 40", 48", 56", 60" and 72" opening. They carry as many as four movable and two stationary saws without difficulty.

These edgers cut true and to dimension at all times. The guides are rigid and cannot shift in the cut. They are crowded to correct position and held immovably in place by a steel setting gauge that drops upon them.

No other edger has this feature.

Waterous New Champion Edgers are fast and accurate cutting, easily operated and perfectly safe. We stand behind every machine we turn out.

Hundreds are in use in mill all over Canada where quality of sawing is a main consideration. Bulletin No. 113 describes them fully.

MOLSONS BANK BUILDING, VANCOUVER, B.C. WINNIPEG, MANITOBA

The Waterous Engine Works Co., Ltd., Brantford, Canada

Mill Owners

The testimonial letters of satisfied users of our Feed Works should be ample proof of the quality of this machine.

Any mill owner who is having trouble with the old style feed works should investigate the merits of this machine, which is claimed by all users to be far in advance of any other machine now on the market.

Full Particulars on Request

THE MACLEAN MACHINE WORKS, Campbell's Bay, Que.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs.
in calm weather, 30,000 in a head wind.

LIDGERWOOD SKIDDERS

The Most Modern Machines for Skidding Logs of All Sizes

We build Skidders for every condition and will send expert logging men to look over your timber lands and advise you what type is best suited to your work.

Portable High Spar Overhead Skidder

Lidgerwood Machines were the pioneers in steam logging and have been constantly improved to meet the advancing requirements of lumbermen.

Lidgerwood Skidders are the only skidders provided with interlocking drums and with a mechanical slack puller.

Portable Ground Skidder

Tree Rig Ground Skidder

A statement of what logging is costing at any particular operation, without taking into consideration the local conditions, and without considering every element of cost from the felling of the tree to delivery at mill, is worthless.

In deciding the cost of skidding by any type of machine not only should the cost of operating the machine be considered, but also the amount of timber that will be skidded at each setting, the railroad construction necessary, and time lost in repairs.

We have paid special attention to the construction of Cableway Skidders required by conditions in British Columbia and the most successful machines now in use in that province were installed by us.

It Is Not Done!

Advertising the merits of one car of lumber is not usual but we have ready for immediate shipment one of the finest cars of four quarter QUARTER SAWN WHITE OAK ever come over the saw in years.

This stock is dry, plump, well manufactured and shows a good figure. The widths are unusually wide, from 10 INCHES TO ABOUT 19 INCHES WIDE, averaging, we would estimate, about 13 inches wide, and the lengths would run about 75% 16 foot, 10% 14 foot, and the balance largely 12 foot lengths.

The quality is strictly FIRST AND SECONDS, National Hardwood Lumber Association grading.

If you want something real choice buy this car from

Every Minute of Every Day Service—Satisfaction

Broad Claims? Indeed! And we fully realize what responsibility we shoulder by making such claims.

That is why we constantly strive to give just a little better service and satisfaction than is ordinarily given. And that is why our customers say they like our way of doing business.

We will welcome your inquiries in regard to any of the items listed below as an opportunity to show you what our Service and Satisfaction policy mean.

Ash

Are You Looking for Pine?

Quality Guaranteed

It is a fact that our lumber is manufactured from choice ***small*** logs. It is therefore free from large knots and other defects and shows a clear uniform grain.

This sort of lumber is especially admired among carpenters--and when you get carpenters coming your way you can look for the lion's share of your neighborhood's trade.

Write or wire us and find out what we can do for you.

Right now would be a good time to get acquainted with Hocken ***quality*** Pine.

A Service of Satisfaction

In dealing with us you have every reason to expect a service par excellence. This, because of the modern equipment, experienced workmen and splendid transportation facilities which our mills afford.

These features, too, are responsible for lumber of the highest calibre—lumber that finds a ready market and yields a substantial profit to the merchant. Our prime Quebec Spruce has the wide approval of retailers and builders alike throughout Canada. We make a specialty of it and shall be glad to make quotations.

The ? of

FOOD STUFFS

The Lumberman is just as much concerned over the prices of food stuffs as are his brothers in the towns and cities.

It has always been our aim to supply the better grade of goods, at prices that appeal to the buyer.

We do a large lumber camp trade, and are thoroughly familiar with the requirements of logging centres.

If you drop us a card we will give you quotations on anything in the food stuffs line you need this year.

Mill Owners

The testimonial letters of satisfied users of our Feed Works should be ample proof of the quality of this machine.

Any mill owner who is having trouble with the old style feed works should investigate the merits of this machine, which is claimed by all users to be far in advance of any other machine now on the market.

Province of Quebec

TIMBER LANDS

License or permission to cut timber on public lands in this Province is acquired at public auction, after due notice has been given, subject to a yearly ground rent per square mile of $6.50 for the years 1919-20 to 1923-24 both inclusive and of $8.00 for the years 1924-25 to 1928-29 both inclusive.

The timber cut in virtue of such license is subject to a tariff of dues fixed by order in council.

Licensees are forbidden to cut on Crown lands trees less than a fixed diameter.

The Regulations also provide that all timber cut on Crown lands must be manufactured in Canada.

In the event of a licensee wishing to transfer his rights, he is at liberty to do so under certain conditions, namely, the paying of a fee of $4 per square mile.

There are at present time about 75,000 square miles of forest lands under license and over 150,000 miles in the possession of the Crown.

WATER POWERS

To obtain authorization for the utilization of a Water-Power in the Province of Quebec, application should be made to the Honourable Minister of Lands and Forests.

Water-Falls capable of developing over 200 H.P. are granted under emphyteutic leases, the conditions of which are upon the following lines:

1.—Duration of the lease, from 25 to 99 years, according to the importance of the water-power and to the amount of capital required for its development.

2.—Payment of a yearly rental which does not vary during the term of the lease, for the land granted, counting from the date when the contract was signed.

3.—An additional yearly charge of from 10 to 25 cents per H.P. developed, according to the geographical situation of the site of the water-power; such charge being payable from the time the power is produced.

4.—The charge referred to in article 3 is subject to revision every 21 years, counting from the signing of the contract.

5.—Delay of 2 years for beginning works and 2 further years for producing power.

6.—The lessee to make a deposit in money or in securities as a guarantee of good faith for the carrying out of the contract. Such deposit may be forfeited if the conditions are not fulfilled; but, in the contrary case, it may be refunded after a certain time.

7.—Lastly, the grantee must submit plans of his works, mills, etc., to the Department previous to their installation, and, when such installation is completed, he must keep the Department informed as to the quantity of power produced.

Beautiful BRITISH COLUMBIA WESTERN HEMLOCK

Though not a hardwood, BRITISH COLUMBIA WESTERN HEMLOCK is possessed of a grain surpassed in sheer attractiveness by the grains of few timber species. Certainly it is the most ornamental of Western woods for inside finishing.

Taking a high polish, free from pitch, and showing a beautiful grain, it is the ideal wood for wainscot, panels and floors. It is hard and not easily dented and has a uniformly firm grain which on drying does not show the minute corrugations characteristic of certain timbers having a marked difference between summer and fall wood.

For strength, ease of working and freedom from shake, BRITISH COLUMBIA WESTERN HEMLOCK is becoming more noted throughout the country each day.

We'll be glad to send you BRITISH COLUMBIA WESTERN HEMLOCK in mixed carloads, along with our other BIG CHIEF Brand Specialties,—British Columbia Red Cedar Shingles, and Cedar and Fir lumber in all sizes known to high-class manufacture.

OAK FLOORS OVER OLD FLOORS---
A Rich Field for Flooring Sales

A rich field for Oak Flooring sales in any community is to be found among owners of substantial homes built years ago---homes built before oak floors had become universally popular. In such homes the most beautiful oak is being laid over the old floors with perfect results.

We can supply the above cut in 2-column or 3-column size to all dealers in Long-Bell trade-marked products.

Long-Bell

Forked Leaf Brand

OAK FLOORING

s made in 3-8 inch thickness especially for being laid over old floors. It has undergone the same thorough seasoning and careful finishing as other Long-Bell oak flooring bearing the Forked Leaf brand. The ease with which it can be laid and the economy and beauty of a Long-Bell oak floor are sales points that can be used most effectively.

Southern Pine Lumber and Timbers

Creosoted Lumber, Timbers, Posts, Poles, Ties, Piling, Wood Blocks.

Oak Lumber, Oak Flooring, Gum.

To Canadian Hardwood Lumbermen

A few years ago the membership of the National Hardwood Lumber Association in Canada was limited to five or six concerns and we had no regular Canadian inspection service, all national inspection work in the Dominion being handled by sending over on call bonded inspectors from the States.

It Is Different To-Day

Now we maintain permanent and adequately-manned inspection service stations in both Toronto and Montreal, which are covering the Canadian hardwood field completely. Our present Canadian membership numbers

Fifty-Five

hardwood manufacturers and wholesalers distributed through three provinces.

There is a reason for this progress as all of our members know. That's why they are members. You are invited to send for a list of these members and ask them regarding the benefits they receive through their membership. The subject should interest you.

BRITISH IMPORTERS

CANADA CAN SUPPLY YOU

Britain's greatest store-house of timber, Canada, offers the logical market for British importers. The "Canada Lumberman" is the medium through which British importers can reach the complete lumber and timber industry of the Dominion in all its phases. The "Canada Lumberman" will, through the use of its advertising columns, bring you into close touch with the whole trade, which can only be reached by the nationally read lumber journal of Canada.

AUDITOR'S CERTIFICATE

We have audited the accounts of the National Lumber Manufacturers' Inter-Insurance Exchange for the six months ended June 30, 1920, and for the period from February 15, 1915, to June 30, 1920, and certify that in our opinion the foregoing statement correctly exhibits the operations for the year and the period named and the financial position at the close.

MARWICK, MITCHELL & COMPANY,
Chicago, July 21, 1920. Certified Public Accountants.

Quick Action

You Can Have It

Try the Canada Lumberman Wanted and For Sale Department. Have you anything you wish to buy or sell in the Lumber Industry? You will find this department inexpensive, and a very effective business getter.

Our Classified Advertisers do not repeat the ad, often. They don't have to. They report immediate results. Use these columns to your own advantage.

ENTERPRISE

Camp Ranges and Heaters

All Kinds of Stoves for Large or Small Camps

For the Drive or Small Camp

THE ENTERPRISE WOODSMAN
Made in one size.

A compact, dependable, strongly made steel range, made to stand hard usage and much moving around. Oven is 21 inches wide. Fire box takes a 22-inch stick of wood. Reservoir holds 10 1-2 gallons and can be put on or taken off in a few minutes. Large wrought iron rings at the corners enable this range to be carried easily with poles.

A Powerful Stove specially adapted for heating Lumber Camps, Boarding Houses, etc.

The Enterprise Camp Heater
Made in two sizes
No. 38 and 50.

"The Enterprise Camper," made in two sizes with ovens 24 ins. and 30 ins. wide. Burns either wood or coal.

THE CAMPER

A large, serviceable, heavy duty steel range, suitable for medium or large size camps, boarding houses, etc. The finest stove of its kind made. Will use wood up to 31 inches long. The cooking surface is extra large. It is a splendid water heater, and can be fitted with either a 15-gallon, detachable reservoir or a waterfront.

Write for Circular showing all these Stoves.

"COPELAND" Shoe Packs — River Driver's — Sporting Boots

Many of the ills of your men can be directly attributed to inefficient footwear, resulting in damp or wet feet. That's why camp operators and store keepers demand only the best. Those who have once tried "COPELAND'S" invariably "repeat" year after year. They have proved for themselves that there are none better made—and this is guaranteed by us.

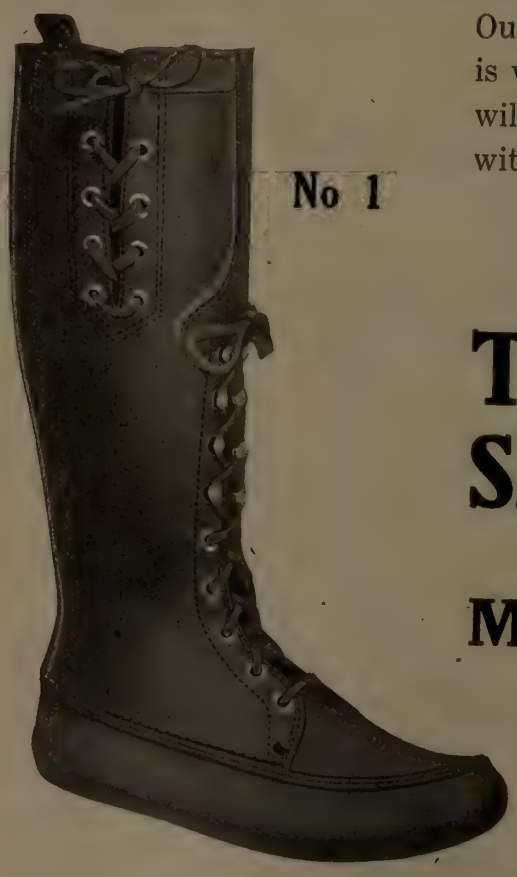
Our new catalogue, fully illustrated is waiting for you. A postal card will bring it immediately together with price lists.

No. 151

Upper of black, smooth grain Chrome Blucher or Bal. cut. Soles of the best selected No. 1 Oak tanned sole leather and guaranteed to hold caulks. This is an all handmade pegged boot.

No. 41

Made with a selected heavy oil tan bottom, 10 inch Menonite top, with full bellows tongue to top. Has back pulls same as our 12 and 15 inch draw string packs. Sizes 6-11.

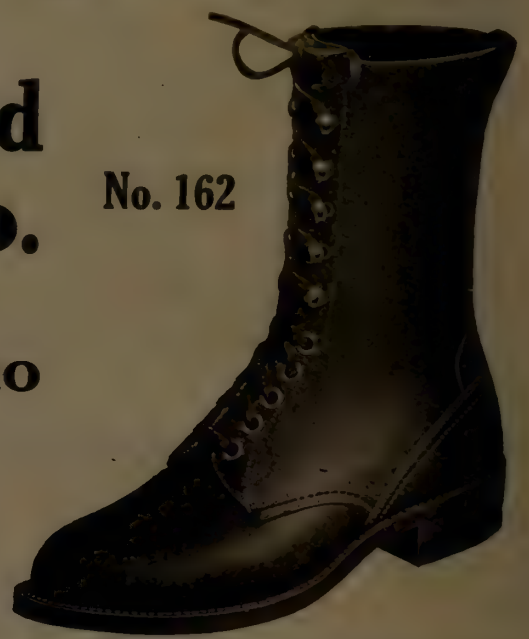


No 1

The bottom is of heavy selected oil tan. Leg 16 in. high, of No. 1 Menonite with hooks and eyelets. Side lacing with bellows, which enables the wearer to put on with ease. Sizes 6-11.

The Copeland Shoepack Co.
LIMITED

Midland - Ontario



No. 162

Made with a 10 inch black, smooth grain Chrome upper. English welted sole of No. 1 sole leather. Heavy outside counter. An exceptionally strong, serviceable boot for logging, etc.

Proved Service Better than Promised Service

Accept for yourself only those articles that have proven their worth when used under similar conditions. Two outstanding articles designed and manufactured by McClary's that have given long years of service under the most trying conditions are the

"Algoma" Steel Range

and the

"Camp Comfort" Heater

Both are sturdy, reliable, made right and bear no weak elements that collapse under strain. They carry the approval of every chef and lumberman.

The "Algoma" is a large capacity Cooking Range—built in three body sizes with various changes in cooking surface. Will not buckle or warp with hard usage.

The "Camp Comfort" has a tremendous heating capacity. Holds large chunks of wood and gives direct heat to the atmosphere. Will add cheer and comfort to bunkhouses and camps of all descriptions.

Our nearest Branch will be pleased to furnish any inquiries with full particulars without obligations.

McClary's

G. H. G.

Lumbermen's Clothing

The best of materials in the hands of skilled operators is the real reason for the superior qualities of this famous brand of **Durabil Mackinaws.**

They are designed to give the greatest comfort under the most trying conditions, and to stand up under the hardest wear. This, they have been doing for many years and gaining for themselves an enviable popularity among lumbermen from coast to coast.

Camp store keepers, not yet acquainted with this line, are invited to write us for catalogues, price lists and samples.

We also manufacture, Blankets, Bedding, Overalls, Sweaters, Mitts and Gloves, Caps, Moccasins, Rubber Footwear, Snow Shoes Etc. Etc. Etc.

They Strike, But They Work

1851-1920 for 69 Years

In the Bush, the Mill or the Factory

Safe Sure Silent

In the Bush, the Mill or the Factory, where extra precautions are necessary, the "Silent 5" Match meets the approval of the critical fire inspector.

The sticks of the "Silent 5's" are all dipped in a chemical solution which causes the match to go "dead" immediately it is blown out, thus eliminating the danger from partially extinguished matches—a danger the fire insurance companies have deplored for years.

Your plant or mill will get a much lower insurance rate, if you have a sufficient number of Eddy's Round Bottom Fire Pails, arranged judiciously about the premises.

These pails are made with a specially rounded bottom so that they must be stood or hung in racks provided for the purpose, where everybody in the place knows where to find them when most needed.

Foods Prepared For Your Requirements

Wholesome — Palatable — Satisfying

SUPPLIES bearing the Canadian Packing Company's name assure you of goods which have been specially prepared to meet your particular needs.

For sixty-seven years this organization has been noted for the unalterably high quality of its products. The experience and prestige gained during these years enable us to supply the lumber camps of Canada with foods exactly suited to their requirements.

These foods are critically selected from the vast quantities at our disposal. They are prepared by the most effective methods known to the packing industry and are delivered to you, wholesome and pure.

The hams, bacon, etc., are the finest grade meats. The delicious long, clear bacon is worthy of special mention—so tasty is it, with just the right amount of firm fat.

Canadian Packing Company food products are hunger-satisfiers, ready to combat healthy outdoor appetite.

To make sure of the best results from baking and cooking, see that your lard and shortening bears our name. It is insurance against inferior quality. C. P. C. Lard and Shortening are always sweet, pure, and wholesome.

Better Belting with Efficiency "Built In"

Efficiency is a result—in our belting it is the culmination of thousands of experiments and tests over a period of fifty years.

The outstanding factor in creating transmission efficiency in our Dominion Friction Surface Belting is our special friction rubber compound which gives our belts a pulley-gripping quality that prevents practically all wastage of power through slippage.

Dominion Friction Surface Belting

will transmit all the power that any belt can be made to transmit because every ounce of material is carefully tested by our experts to make sure that it is up to our high standard.

This "Built-in Efficiency" is backed by the service of our belting engineers, who are ready to demonstrate its value without charge or obligation.

Phone or wire our nearest service branch.

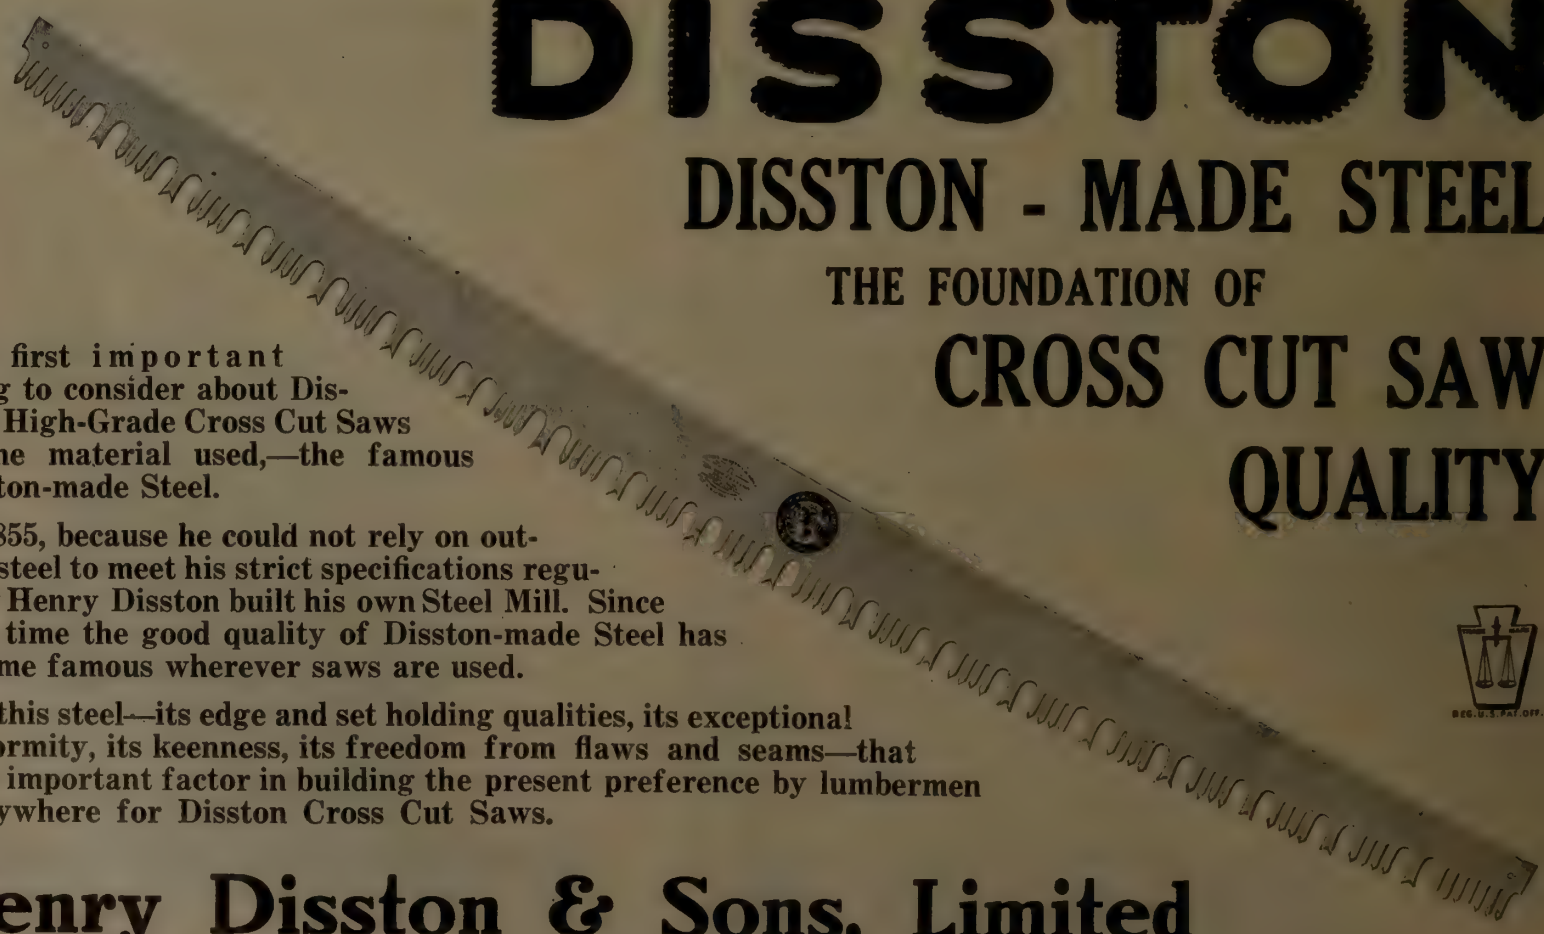
DISSTON

DISSTON - MADE STEEL

THE FOUNDATION OF

CROSS CUT SAW QUALITY



The first important thing to consider about Disston High-Grade Cross Cut Saws is the material used,—the famous Disston-made Steel.

In 1855, because he could not rely on outside steel to meet his strict specifications regularly Henry Disston built his own Steel Mill. Since that time the good quality of Disston-made Steel has become famous wherever saws are used.

It is this steel—its edge and set holding qualities, its exceptional uniformity, its keenness, its freedom from flaws and seams—that is an important factor in building the present preference by lumbermen everywhere for Disston Cross Cut Saws.

TIMBER CRUISING

AERIAL Photography and Aerial Timber Cruising is now the only modern method of determining the timber wealth and topography of large properties. Every acre of your limit can be examined in a remarkably short time. We have dozens of machines and the most capable pilots ready to assist you.

Incorporated in September 1919, with a capital of $300,000, the Bishop-Barker Aeroplanes Limited has met with extraordinary success in the inauguration of aerial transportation and geographical survey.

Our machines have carried 5,000 passengers over 56,000 miles. Our stunt-pilots have flown at numerous public fairs including the Canadian National Exhibit.

Over 4,000 photographs have been taken for industrial and educational bodies, and all without a single mishap.

Plus

The "Bell" Locomotive

This is a combination that has solved the haulage problem of many lumbermen.

The "Bell" Oil Burning Geared Locomotive is the sturdiest, strongest, and most economical of them all. Its construction is simple, and compact. It is oil burning and is operated by one man.

The "Bell" was designed by highly skilled engineers whose training embraced a practical knowledge of the requirements of the lumberman.

In sizes from 2 to 24 tons. Just drop a card and we will forward complete information.

ATWATER AND NOTRE DAME

MONTREAL, P.Q.

These days of high priced material, tight money, car shortage and other business handicaps, it is quite an acrobatic feature to collect a complete stock of Lumber, Millwork, Sashes, Doors, Finish, Flooring, Etc., and, Mr. Retailer, if you could buy all these lines from one firm in small quantities to make up mixed carloads and thus keep turning your capital over often, you would be a happy man. Your worries would be over.

We can do it for you. It does not matter what you need, we've got it right here. Mixed cars are our desert. We like the business and look after it carefully. We manufacture everything right here.

We can give you also straight carloads of Dressed Lumber, Sashes, Doors, Mouldings, Finish, Etc. in all kinds of lumber.

Let us mix it up in a car for you as a trial

Packard equipped with "Roll-Off" and Trailer for Lumber Hauling. The ability of a Packard to operate for 10 years or more, makes it more economical to use Packards than "other makes" that wear out in 2, 3 or 4 years' time

Does the Lumberman Realize the Economy of Regular Maintenance Service

THE Lumberman who handles heavy loads every day finds the solution to lower haulage costs in regular, expert maintenance for his trucks.

That is why he asks, before he buys a truck today, "What sort of maintenance organization will you put behind my truck?"

In more than 200 Packard Service Stations you find Uniform Service Methods, Uniform Stock-keeping Methods—a uniform system in place of the haphazard, time-consuming practice found in the average repair shop.

You will find more than one hundred repair operations standardized—workmanship improved, time saved, costs reduced.

Co-operation between owner and Packard Service is carried out by a system of monthly truck inspection, whereby more efficient operation and maintenance are assured.

The Packard Technical Service Division was established to give the fullest advantage of Packard's 44 points of engineering superiority, and the long life built into every Packard Truck.

And the truck user who is anxious to put his hauling system on a solid economical foundation—will quickly see the advantage of such expert continued maintenance in reducing his hauling costs.

We have prepared an interesting booklet for the Lumberman. Sent by nearest Packard Distributer on request.

PACKARD MOTOR CAR COMPANY, *Detroit*

YOU NEED ONE !

F-5-L FLYING BOAT

FOREST FIRE PATROLS

Tracing the smouldering bush fire by Aircraft, is the modern method.

Thousands of dollars can be saved for holders of timber limits. Fires can be located within a few minutes and dealt with before they have a chance to spread.

The following is an extract from a letter on Nov. 3, 1919, from the air patrol of the St. Maurice Forest Protective Association (Ltd.)

> I would emphasize that among all the aircraft I have flown, I do not know of any other machine which would have proven as successful for patrol work over forest lands as the type 2-L. The Liberty Motor proved extremely reliable, and the heavy body of the machine gives it great stability, and prevents danger arising from heavy "bumps."

Own Your Own Aircraft
Engage Your Own Pilot

The Flying Boat is exceptionally adapted for FIRE PATROLLING, TIMBER CRUISING, AERIAL PHOTOGRAPHY, also AERIAL TRANSPORTATION.

We can equip you with any of these types of aircraft at short notice. F-5-L., H.16., or the HS.2-L, Flying Boats.

We can make immediate delivery on new Canadian Training Planes (The Canuck). These machines are absolutely new and fitted with OX5 Motor.

HEAD OFFICE: OTTAWA, ONT.

A Fast Feed Matcher Head scientifically designed for matching from 200 to 300 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.
Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40 **Toronto, September 1, 1920** **No. 17**

The Lumber Industry and National Development

WITH this issue the "Canada Lumberman" completes forty years of continuous publication. In a comparatively young country such as Canada, this attainment may justly inspire feelings of satisfaction, if not pride, in having contributed in some degree to the development of such an important industry as that of lumber. The occasion is marked by the publication of a number in which features of unusual interest are presented relating to the varied activities, expansion and status of the lumber industry. Every effort has been made to impart timely and useful information on the different phases of the lumberman's life, from logging operations right through to the distribution end. There is possibly no great national industry regarding which more misconceptions and romantic ideas prevail than in respect to lumber and logging. The very nature of the work, its open and free character; its challenge to mother nature and the elements; its picturesque surroundings, and the cosmpolitan nature of its employees impart to the whole undertaking an irresistible charm and magnetic touch that give rise to many false impressions.

The tremendous risks which the lumberman has to undergo, the possibilities of heavy loss; the speculation with the forces of earth—the heat, rain, snow, ice—not to speak of the human problem, are known only too well to those who have to bear the burden and brunt of all these circumstances. Then there are the fluctuations in the market conditions; the ebb and flow of demand and supply; the barrier of scarcity of cars; congested terminals; ascending freight rates and other agencies over which the lumberman has no control.

Lumber is not a product that is made to-day and sold to-morrow. It is not a commodity that can be merchandised in a week, a month, or even six months for. From the time cutting starts in the bush until the finished product is in the hands of the consumer and final settlement made, often two years or more elapse and, therefore, the lumber manufacturer must be a man of vision, industry, foresight and faith.

Anything that will assist any branch of this splendid national enterprise to adopt the latest ideas in the development and extension of its service, reduce overhead, maintenance and other expenses, and help to build trade on a larger and broader foundation, is worth while and is the purpose animating the instructive and edifying articles which appear in this edition, through the kindness and co-operation of leading exponents of the trade.

While a good deal of attention has been given to operation, manufacturing and distribution, there is considerable anxiety prevailing regarding the future in the matter of prices and production. While each one has his views respecting the days to come, these are often biased through personal connections or the angle at which the observer is placed. Those who are able to take a wide, general grasp of the industrial situation, and more particularly as it affects the lumber Industry, are assured that the world will need lumber and need it badly for many years to come. They are convinced that as long as the high cost of living keeps up, and an ascending scale of wages is required to meet the conditions that prevail, there will be no permanent decline in present quotations.

The expense of production is high and is growing still higher. Until there is a radical change in basic environs it would seem that no further declines can take place in value, and, judging by the shipping perplexities it may become increasingly difficult for certain distributors to secure an ample supply of cars.

While the past few months have been quiet in the lumber line the volume of business has been reasonably large. There are no deterrent factors that should undermine confidence or optimism. There are encouraging signs on every side, and the future contains much of promise and satisfaction. The Canadian lumber industry will play its part in the future as it has in the past, strongly upholding its own interests and standing and, at the same time, working hand in hand with other huge undertakings to bring about a larger, better and greater Canada.

It has been well said that these times do not really differ from any other times the world has ever known. They just move faster. The days are just as long if we are idle, and just as short if we have work to do, but there is less chance for idle hands and more opportunity for those who work.

Modernizing the Logging Industry in Canada

Machinery is Superceding Hand Labor in Nearly All Other Activities—Eastern Conference Should Stimulate More Economic Production

By Roland D. Craig, Forest Engineer, Commission of Conservation

Changes in the forest and in the demand for forest products are bringing about new conditions in eastern Canada, to which the time-honored methods of logging are not adapted. The timber supplies are each year receding farther from the main rivers which for generations have carried the logs to the mills. The unlimited quantities of the grades and kinds of timber once demanded are no longer available, and now almost every kind and quality of wood can be sold at a good price if it can only be brought to the market.

Hauling logs with caterpillar tractor

Not so many years ago white pine was the main and, in many cases, the only species taken out of the woods. To-day nearly twice as much spruce lumber is cut as pine and, in addition, there is almost as much spruce used for pulp as there is pine cut. Hemlock used to be left to rot in the woods after the bark had been taken off for tanning, but is now a high-priced lumber tree. The despised Jack-pine is one of the chief sources of railway ties and is becoming a factor in lumber production. Even balsam fir and poplar are worth about $20 a cord as pulpwood. The hardwoods, which have been considered weeds in the forest, find a ready market when manufactured. At present, the equivalent of over two hundred million feet of hardwood is cut annually, but about one-third of it is used for distillation. The decreasing supply of hardwoods such as oak, hickory and ash in the United States has forced our manufacturers and builders to use our home-grown birch and maple with the result that the demand exceeds the supply.

Adjustment to Meet New Conditions

These changes in the source of supplies and in the market requirements call for the adjustment of methods of logging to meet the new conditions. Great progress has been made in the manufacture of forest products. The modern sawmill with its gang saws, live rolls, and automatic trimmers is a vast improvement on the sawmill of fifty or even twenty years ago. The pulp mill of to-day is a most highly developed organization of intricate machinery requiring the greatest technical skill in construction and operation. But in the woods, the logging methods employed fifty or a hundred years ago are still practiced with comparatively little improvement. Dependence is still placed on the physical strength of men and horses and the uncertain transportation of the streams and rivers though it may take two years to effect delivery.

The labor situation is constantly becoming more difficult. Logging, as now conducted, provides only temporary seasonal employment and, under the prevailing conditions, does not attract the most efficient labor nor is it possible to pay as high wages as prevail in other industries.

The operations in the wood are dependent on weather conditions. There must be the right amount of snow and the right temperature to keep the roads in shape and the thaw must be at the proper rate to facilitate driving. If labor can be made more efficient by the use of logging machinery that could be operated throughout the year and if transportation independent of the weather can be installed, it would seem well worth trying in every operation.

Aside from the uncertainty and the time required, river-driving is adapted primarily to the logging of softwoods. Though hardwoods, if properly dried, can be driven short distances on good streams, driving is not adapted to the exploitation of hardwoods generally. Even with the softwoods there is a heavy loss through sinkage. Some pulp operators estimate their annual wastage from this source at over 10 per cent, and in the case of balsam fir, as high as 15 per cent.

From the standpoint of maintaining the production of the softwoods, as well as utilizing the hardwoods, it is essential that all the mature timber should be cut simultaneously. When the conifers are removed from a mixed stand, the hardwoods so completely suppress any small softwoods that may be on the ground, or may subsequently start, that they have little chance of ever attaining merchantable size. If the hardwoods were removed, however, in the majority of cases a second crop of conifers would be secured naturally.

Simultaneous Cutting of Timber

Artificial reforestation is no doubt practicable under certain conditions, but all we can do in this direction for many years will have little effect in supplying our forest industries and, as a general policy, we must depend on nature, guided by systematic cutting, to maintain the kind of forest production desired. Any improvements in the present methods of logging which will facilitate the utilization of the hardwoods will not only increase the immediate returns to the industry, but will make for a better succeeding crop.

The solution of the problem of increased utilization of the forests seems to be in the improvement of transportation and it is time that consideration be given to the means used in other regions or, if necessary, develop our own methods which will be suitable to the local conditions. In some regiosn the use of trucks has proved economical even when necessitating considerable improvements of the roads. Tractors, especially of the caterpillar type, are proving very efficient in logging, not only increasing the output, but in certain cases, materially reducing the cost as compared with teaming.

Those who were engaged in taking out timber in France during the war learned to appreciate the value of light railways in a rough country. The use of railways, both of standard and narrow gauge, in logging has been very largely adopted during the last ten years, under conditions not unlike those of eastern Canada, but, as yet, only a few miles of logging railways are operated in this part of the Dominion. Railways have the advantage over river driving in that they can be operated throughout the year, independent of weather conditions, and all of the various kinds of wood, soft or hardwood logs or pulpwood, can be delivered at the manufacturing plants without loss or delay or further handling. Experience goes to show that within certain limitations the initial and operating costs are more than compensated for by these advantages.

In practically every other industry hand labor is being superceded by machinery as much as possible. The farmer no longer uses the cradle and flail to harvest and thresh his grain and tractors and

Loading square timber on railway at Gogama is the scene on the left. Next to it is a jackpine camp (Austin & Nicholson) near Cartier, Ont. in the heart of the jack-pine country. On the right are yellow birch logs being shipped from Pickerel, Ont., for export to England.

On the left is seen a modern saw mill at Foleyet, Ont., with pulpwood carrier. Breaking in log roads with a snow plough is shown next and on the right are seen the hardwoods left after the removal of pine and other softwoods

trucks are rapidly replacing horses on the farm. There are numerous labor-saving and time-saving logging devices on the market and the reason they are not in more general use is evidently a lack of knowledge of their application and cost under our local conditions.

On the Pacific Coast a logging congress is held every year. It is attended by large numbers of practical loggers, machinery men and others interested in forest exploitation. At these meetings the experiences of various operators from British Columbia to California are exchanged, and the latest inventions and methods of logging are not only described but are demonstrated in the woods. As a result, wonderful progress has been made in the last few years, and the logging business has been practically revolutionized. Attention is also given to the human element in logging, and a great improvement in the living conditions of the men in the camps has been effected through these meetings.

Logging Conference for the East

Is it not possible to organize such a conference in eastern Canada? Many operators are experimenting in new methods, but the value of their experiences is lost for the want of a medium through which to impart their knowledge of the results to others. At gatherings of this kind the manufacturers of logging machinery have not only an opportunity to bring their products to the attention of the industry, but they learn much from the practical woodsmen which enables them to improve their machines.

We have annual gatherings of manufacturers of pulp and lumber, but the men who are responsible for supplying the manufacturers with the raw material and upon whom the future of our forests depends, live and work in the isolation of their camps, and have little opportunity of keeping in touch with the advances being made in their own industry.

I make the suggestion of establishing an annual logging conference, feeling assured, after seeing what has been accomplished in the west, that it will result in increased and more economical production and in the improvement of the forest from the standpoint of maintaining the supplies of our most useful and valuable eastern species of timber.

How Fassett Company Gets Out Its Timber

Logs Are Cut Under Contract and Material Delivered to Landings Alongside Logging Railway—Busy Operations of Progressive Plant

By A. W. Bentley and F. A. Clarke

The Fassett Lumber Company, Limited, is situated at Fassett, Quebec, in the county of Labelle, on the north shore of the Ottawa River, about forty miles east of Ottawa and seventy miles west of Montreal. The property is part of the old Papineau Seigniory, which was given to Louis Joseph Papineau, after the Lower Canada Rebellion in 1837. The Owen Lumber Company of Montebello, Quebec, was the first to log this area, the earliest logging dating back about twenty-five years. The Haskell Lumber Company from Pennsylvania acquired the property from the Owen Lumber Company from Pennsylvania in 1906 and a few years ago sold it to the present owners, the Fassett Lumber Company, Limited, who have since then bought several small adjoining areas. The head office is at Fassett, Que., on the Canadian Pacific Railway. The company own about 110 square miles of land on which they conduct extensive logging operations. The Standard Chemical Company have a wood distillation plant adjacent to the mill of the lumber company. They utilize the waste products of the saw mill, and also cut over the land that has been logged by the lumber company.

Geologically, the country is of the typical Laurentian formation, the topography presenting a series of low, rolling, rocky ridges covered with a mixed coniferous hardwood forest. The valleys between the ridges are for the most part swampy in nature, and here and there contain small lakes. Streams are abundant along the valley bottoms, but the only river deserving the name is the Salmon, which follows a winding course southward through the tract, being fed by numerous small tributaries on its way and empties into the Ottawa river at Montebello.

The rock, of which there are profuse outcroppings, is composed of pre-Cambrian granites, which have in many instances become metamorphosed into schists and deformed granitic sediments. The sandy loam character in the swamps is characteristic of the low lying part of the area. Taking the area as a whole, however, a mixture of fine sand and gravel is the nature of the soil. The humus covering of the soil is greater on the swamp areas than on the slopes or tops of the ridges.

About twenty-five years ago this area was logged for white pine, the logs being driven down the Salmon River and the west branch of the Salmon River. In 1900 and again in 1905, the Salmon and west branch were driven, pine, spruce, and the hemlock being taken out. In 1906, the construction of the Salmon River and Northern Railway was commenced and since that time the area has been logged annually for the remaining pine, spruce, hemlock, balsam and hardwoods. In addition the company, in the same year, commenced the harvesting of the hemlock bark for tanning purposes, and the Chemical Company the cutting of hardwoods for distillation.

One of the rollways of the Fassett Lumber Co.

The Fassett Lumber Co. had five camps last winter on the area

from which they cut of 20 million board feet of logs, and 8,000 cords of pulpwood. The Chemical Company cut about 11,000 cords of chemical wood. The estimated life of the area for saw logs is from three to four years, but as far as chemical wood is concerned, it is problematical. It depends not on the supply of material for this purpose, but upon transportation facilities, as the operations for extracting material for chemical purposes do not keep pace with the logging, being, at least, five or six years behind in this regard .

The lumber company find an excellent market for all grades of material and prices were never so high. The transportation facilities from mill to market are good. The "North Branch" of the C. P. R. between Ottawa and Montreal runs within a few hundred yards of the mill and spur tracks have been built from the mill yard to the

The hot pond of the Fassett Lumber Co.

railroad sidings at Fassett station. All yarding of cars to and from the railroad is done by the lumber company's own engines.

In addition there is a spur track running from the mill yard to a pier on the Ottawa River, a distance of half a mile. From May to October, lumber is shipped from this pier by barge down the Ottawa to Montreal. From there some shipments continue by barge direct to New York city, taking a river and canal route to Lake Champlain and Hudson River. The markets of the northeastern states in which most of the hardwood is sold, are easily reached by rail and water From the woods to the mill the logs are hauled by a standard gauge railroad built for the purpose, and operated by the company itself.

Operate a Logging Railway.

The Fassett Lumber Company operate in addition to their mill a railroad for hauling logs, pulpwood, and tanbark from the woods to the mill. They do not, however, carry on the operations in the woods themselves. Each year a contract is drawn up whereby a contractor agrees to cut all logs, pulpwood and tanbark on the area that is decided upon for that year, and to deliver this material to landings alongside the logging railroad. From these landings the company's own men load the logs, etc., on to the cars and they are hauled to the mill. The lumber company have a standing agreement with the Standard Chemical Co., whereby the latter are allowed to cut any remaining hardwoods they wish after the land has been logged over, by paying stumpage for what they cut. The chemical wood is hauled on the logging railroad to the chemical plant by the lumber company at a determined price per cord.

The company's principal products are hemlock, spruce, hardwood and pine lumber, but they also handle minor products, viz.: pulpwood (spruce and balsam) lath, and hemlock bark for tanning purposes. The original mill was brought from Pennsylvania in 1906. It was burned down in 1913 and the present one erected, which has a capacity of 100,000 feet per running day of 10 hours. The equipment ctonsists of two band saws and "shot gun" carriages, automatic trimmers and slashers, and two heavy duty edgers. The slabs and ends are sorted out; those that are suitable for making laths are put through a lath machine, and the remainder fed to a "hog" grinder. The resulting ground, wood product is used as fuel by the company, there being sufficient also to supply the Chemical Company, whence it is transported by an overhead carrier. This consists of an endless chain with scoops operating in the box-like trough. The burner has not been used at the mill since 1913.

Cutting Up the Pulpwood.

Pulpwood logs are treated separately from saw logs. They are brought up a separate incline from the hot pond and rolled onto tables fitted with circular saws, which cut the logs into four foot lengths. These cordwood size logs then pass on to three rossing machines of the revolving knife type, which remove the bark. The pulpwood sticks are then thrown into chutes which land them directly into box cars below.

The power of the plant is supplied by a 650 h.p. Corliss engine of the stationary steam type. The mill and yard are illustrated with electric light generated by a 70 k.w. generator in the engine room, and the surplus power is sold to the town of Fassett for lighting purposes.

All lumber is graded as it leaves the sorting tables and is placed on small hand cars. These are run out into various parts of the yard, where the different grades and species are piled separately. The tracks are elevated on a trestle structure, and the piling capacity of the yard is about 14 million feet of lumber.

A special feature of a lumbering operation of this nature, where the logs are hauled from the woods throughout the year by means of a railroad, is the hot pond. This pond is usually an artificial one and is used as a temporary storing place for logs after they are unloaded from the logging train at the mill terminus of the railroad. The pond at the Fassett Lumber Co.'s mill is an artificial one, being supplied with water pumped from the Ottawa River. It has a depth of four feet and is about 100 yards long by 30 yards in width. As the mill is operated the whole year it is necessary to keep the pond from freezing during the winter. This is accomplished by discharging the exhaust steam from the mill into the pond.

Unloading Logs Into Hot Pond.

To facilitate the expeditious unloading of logs from the cars into the hot pond, an inclined rollway is constructed on one side of the pond and parallel to the railroad. This rollway consists of a framework composed of three parallel sets of stringers, spaced 8 feet apart, which extend along the entire edge of the pond. The outer stringer projects over the water's edge and rests on solid bottom, while the other stringers are supported on uprights placed from four to six feet apart. Heavy timbers shod with steel rails are placed on top of the stringers to serve as a bed on which the logs from the cars are rolled. These timbers have a pitch of about 15 degrees from the track to the pond. The cars of logs are brought alongside the rollway, the tops of the cars being six inches above and about six inches from the rollway. The railway track is built so that the cars slope towards the rollway, thereby facilitating unloading the logs from the cars.

The plant of the Standard Chemical Company is situated alongside the mill. The buildings are of concrete and where wood is used it is protected by corrugated iron covering. The cordwood, from which the distillates are made, is brought down from the woods on the logging railway, and piled in the yard adjacent to the plant. Sufficient stock is kept on hand to operate the plant for a year's time.

When ready for burning the cordwood is piled into cars with iron frames, each car having a capacity of two cords. Three of these cars at a time are run into a heated, air tight, retort oven, a fire underneath driving off vapors from the wood which are condensed. The pyroligneous acid resulting from the condensation of the gases is separated into wood alcohol, acetic acid, etc. Each car of wood remains in the

Virgin forest in valley timber belonging to Fassett Lumber Co.

oven twenty-four hours, after which time the process is complete. The cars now containing charcoal are withdrawn to a covered shed where the charcoal is allowed to cool gradually.

Fire Protection Appliances of Plant.

The fire protection appliances and arrangements at this plant are noticeably good. An artificial pond, similar to the hot pond at the mill, is built beside the plant, and kept from freezing by means of the exhaust steam from the engine room. A force pump is operated in the engine room to keep up high pressure in the water mains and sprinkler system in the buildings. The hose, reels and hydrants are so situated that several streams can be directed onto any part of the

tank, which ensures a sufficient pressure in case of a breakdown of the force pump. It is obvious that the fire protection of the plant is arranged with great foresight, which is extremely necessary, as the danger from fire in a concern of this nature is great.

Since the Fassett Lumber Co. have been operating they have not had a serious fire on their forest property, and no signs of a blaze in the virgin is noticeable. Several small fires have occurred, but these have been easily put out by the woods force before they caused any appreciable damage. The causes of any fires that have occurred, are attributed to sparks from the company's locomotives, and to carelessness of men travelling or working in the forest. One serious fire was started by a locomotive, with the result that a large area east of the Salmon River was burnt over, but this was not on the company's property.

All the men working in the woods are instructed to extinguish fires at once. Moreover, the property is well watered by numerous streams and large springs, and, as the latter flow all the year round, there is always an abundant water supply for fire fighting purposes. An additional preventative measure is the fact that the presence of the railroad makes it possible to bring large numbers of men equipped for fire-fighting, to any part of the property within a short space of time. Undoubtedly private ownership of forest lands insures more care being given to fire prevention. Rules forbidding trespassing can be more rigidly enforced and employees can be better educated that carelessness does not pay, than if the company were operating on Crown lands.

Conditions of Logging Contracts

It has been mentioned previously that the Fassett Lumber Co. do not do their cutting in the woods. This is accomplished by means of a yearly contract in the form of a specially typed document, by which a contractor agrees to cut all material of specified species and dimensions on a given area, and to haul the same to certain points on the Salmon River and Northern Railway. The price paid the contractor for this work depends upon the locality, species, amount of merchantable timber on the area, and the logging chance.

S. J. Staniforth, the general manager, along with the woods superintendent and the contractor, go over the area to be logged and come to a mutual agreement as to the conditions of the contract. A yearly agreement is considered necessary, as the company have to build new track into each area and the cost of this and the logging chance of the jobber vary considerably, according to the local conditions. The woods work is not placed on the market for open bidding, but is carried out each year by the same contractor.

Payment to the contractor is made as follows: so much for logs on skidways, so much for logs on landings and so much for logs being scaled at the mill. Certain specifications made in the contract are shown in the cutting regulations issued by the company to jobbers, to whom contracts have been sub-let by the contractor. Provisions are made in the contract to ensure that care is taken by the woods labor in the prevention and proper fighting of fires, the prevention of

General view of the mill of Fassett Lumber Co., showing sorting shed and tramways in front

unsanitary conditions in the camps, and with respect to compensations due to loss from strikes, stress of weather, fire, etc. The transport of men and supplies is carried out by the company free of charge to the contractor.

In regard to the Fassett Co.'s agreement with the Standard Chemical Co. as previously mentioned, the latter are allowed to cut all hardwoods on logged over lands at so much per cord, the rate not being dependent upon mileage. Where necessary the company builds switches to landings at the Chemical Company's expense, but the latter do their own loading of wood. There are no restrictions as to the quantity to be cut on the area, but it must be on logged over land.

Character of the Forest.

The area is covered with a mixed hardwood-coniferous uneven aged forest, but the larger percentage is overmature timber from 160-200 years old. The forest varies from an almost pure coniferous type in the river and stream bottoms to an almost pure hardwood type on the tops of the ridges. On the slopes a varying mixture of both types is found.

In the valleys along the stream bottoms, spruce, balsam, white

On the left is shown the chemical wood cars of the Fassett Lumber Co. and on the right the head office

pine, tamarack are the predominating trees, while on the lower slopes, hemlock, yellow birch, spruce, balsam, white pine, black ash and elm make up the stand. Midway on the slopes are found hemlock and yellow birch, along with some sugar maple, basswood, spruce, ironwood, white birch and beech. On the ridge tops maple, beech and basswood predominate, with some hemlock and ironwood. Of all species in the virgin forest hardwoods compose about 60% and conifers 40%.

The maximum stand per acre would be about 18,000 ft. board measure. Stands running to this figure are to be found in parts of the valleys where a few large pine still remain and where the hemlock shows its best growth. The average stand per acre, however, approximates 7,000 feet per acre.

Action to Recover Pulpwood Value

It is announced that Hon. W. E. Raney, Attorney-General for Ontario, has taken steps to institute an action in the courts against Walter H. Russell, lumberman, of Port Arthur, whose pulpwood operations on Crown lands in Northern Ontario were the subject of a special interim report by the Commission of Messrs. Justices Riddell and Latchford, who are making an enquiry for the Government into the administration of Crown lands.

The action against Russell will have two phases, one dealing with the recovery of the value of pulpwood—more than 79,000 cords in all—which the commissioners held was wrongfully taken, and the other seeking the cancellation of mining patents held by Russell. It will be remembered that the Commissioners in their report pointed out that Russell, through dummies, had taken out mining licenses and staked locations for the express purpose of stripping them of their pulpwood; also that he had taken pulpwood from Crown lands for which he had no license or permit at all. The value of the pulpwood taken, according to Mr. Raney, amounts to a very large sum, and the Crown is seeking to force Russell to account for every cord of pulpwood wrongfully taken. It is also trying to regain possession of the mining locations staked out. At the present time the Government holds from 10,000 to 15,000 cords of pulpwood that was seized on Crown property after Russell's men had cut it.

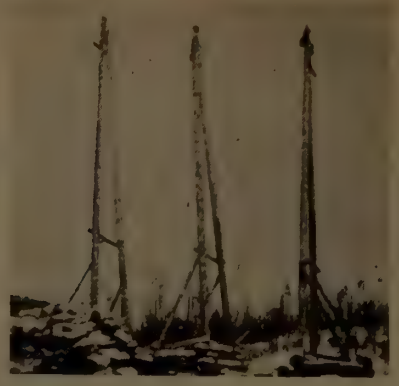
Work Starts on Fort William Plant

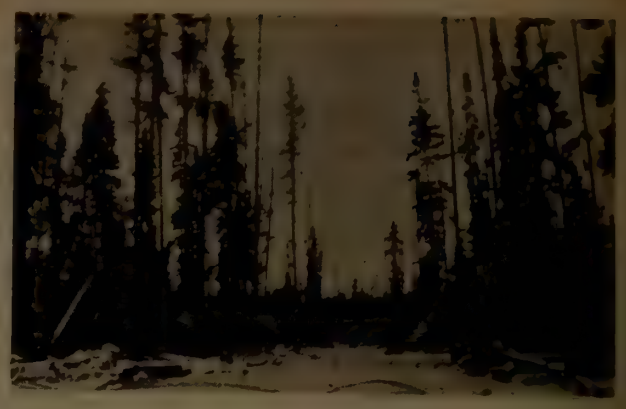
Lord Burnham, president Imperial Press Conference, turned the first sod recently of Fort William Paper Company's big mill, which by February next year will be turning out pulp at Fort William, Ont. According to J. G. Sutherland, president, paper-making machines will be operating by January, 1922. Large extensions are planned until the plant is the largest in Canada.

In an address given at the ceremony, J. G. Sutherland said there were five reasons why the company decided to build the plant in Fort William, power conditions, pulpwood situation, transportation facilities, geographical situation as regards market, and good spirit and co-operation of all the Fort William people, the last reason being worth any two of the other four.

Lord Burnham, who spoke after turning the sod, said that the mill would make history. He believed it would represent an expenditure of millions, and he hoped the local plant would be able to supply the newsprint deficit in the United Kingdom as well as in Australasia.

Many moving picture men and photographers took pictures of the ceremony.





On the left is shown the operation of icing roads for the Schroeder Mills & Timber Co., in the centre the jammers used in loading operations and on the right a section of the main haul road

What We Saw at Schroeder Company's Camps

How the Various Gangs are Handled, Roads Built, Hauling Done and Operations Generally Conducted Along "Lost Channel"—Some Features of Camps

By R. S. Carman and H. P. Eisler

The Schroeder Mills & Timber Co. have their Canadian headquarters at Pakesley, Ont., on the Canadian Pacific Railway. A spur railway line, known as the Key Valley Railway, runs from Pakesley, which is 206 miles north of Toronto, in an easterly direction up the Valley of the Key River to a small lake, northwest of the Lost Channel of Kawigamong Lake, then south-easterly to the shore of the Lost Channel, where the mill is located. From here one must Follow the Kawigamog Lake up to the foot of Watt River and in a deep bay, on the north side of the lake, is the storehouse for Camp No. 2. A tote road runs along the left bank of a small stream which enters the lake here, and leads one to the camp nestled in a small hollow and well protected by low hills.

The interests of the firm are in the hands of a general manager, James Ludgate, who handles the eight logging camps in this district by a type of military control. Orders are issued by telephone to the camp foreman, who is in complete charge of one camp and is directly responsible to the manager. The foreman places a man in charge of each gang of men that work as a unit, but this does not prevent him from overseeing the work of each individual, and thus keeping a firm control of all branches.

The area in the vicinity of Camp No. 2 has been logged for pine saw timber for three consecutive winters. Both red pine (pinus resinosa) and white pine (pinus strobus) are taken and the logs are cut into 10, 12, 14, and 16 feet lengths. The average yearly cut for the past three years has been approximately three million board feet and, it is estimated, that the camp will continue operations at the same rate, or better, for the next three years.

Prior to the summer of 1919 the Schroeder Company did not own the saw mill situated on the Lost Channel of Kawigamog Lake and delivered their logs to Georgian Bay, by the spring drive through the Kawigamog River, Pickeral River and French River, where they had no difficulty in disposing of them to saw-milling companies.

In the spring of 1920 the logs of a number of the camps, including No. 2, were delivered to the company's mill on the Lost Channel and the sawn product is being taken out by rail to Pakesley.

There have been little or no labor difficulties on account of the reasonable wage which the company pay and the excellent food which is provided in the camps. Here, as in all other industries, the company was seriously set back by lack of men during the war. Besides this, there is the customary drifting of a certain class of men from camp to camp all over the country.

Virgin Pine in Fine Condition.

The limit was leased from the Provincial Government in 1899 by the Victoria Harbor Lumber Co., who held it until November of 1916, when it was transferred to the Schroeder Co.

This is the first time that this area has been cut over, and as a rule the virgin pine is in fine condition, the average log running about 50 board feet (Doyle rule), and approximately 50 to 65 feet of merchantable timber.

There has been no recent fire in the vicinity of Camp No. 2, but other camps have suffered from time to time and, when once burnt over, the soil being thin, there is little chance for reproduction. The exception to this is on a large area about five miles from the camp, where a fire went through some seven years ago, and pine reproduction of five and six years of age is quite thick and in a healthy condition. The present policy of the company is to "broadcast" burn each spring, before the soil dries out, the slash of the past winter's felling. The plan has not been in operation long enough to draw any conclusions, but it seems to be the only solution in that part of the country since the cost of piling and burning would be financially impossible.

The Character of the Forest.

The scaling is done by a licensed provincial scaler and assistant who remain with the company for the winter, travelling from camp to camp measuring only the skidways which have been completely built. The scaler is checked from time to time by the camp foreman on the one side, and on the other side by the district ranger or provincial inspector.

There are only two types in the vicinity of Camp No. 2 (1) the pine type, and, (2) the hardwood type. The pines are in almost pure stands on the higher ground with a mixture of hardwood and conifers on the slope and finally a hardwood bottom-land type. The average stand of pine per acre is about 12,000 board feet with a maximum of 20,000 board feet on the ridges. No estimate has been made of the hardwoods or of the area they cover. The pin type is composed of 95% white pine and 5% red pine. The whole area is being logged for saw timber, no consideration being given to any other product.

The amount of defect in the timber is variable, depending on the area in which it is cut, moisture and light conditions, and early fire injury. The trees are fairly straight and hold their size well up into the crown. In many places the amount of clear merchantable is small on account of heavy dead limbs low down.

The Cruising and Estimating.

The Schroeder Co. cruised this area prior to the transfer of the limit. An estimate, of the contents of the limit, was made by the manager and his assistant, both of whom have actually seen the yield of similar stands during previous lumbering operations. This method of cruising is typical of long-established lumbering companies, and usually results in a conservative estimate of the yield on the area in question.

Camp No. 2 is located in a small valley, about four acres in extent, and is almost surrounded by low-lying hills which protect it from the main sweep of the winter's storms. The valley bottom is fairly level and free from any outcropping of rock, thus forming an excellent site on which to build a modern camp. Along one side of the valley bottom and only a few paces to the east of the buildings, runs a small stream of pure, cold water, so essential to any camp. A tote road was built, parallel to the stream's course, forming the connecting link between the camp and the nearby Kawigamog Lake.

All of the camps of the Schroeder Co. are provided with at least two special buildings. The isolation hospital and also the laundry house without doubt tend to increase the health of the men in general and considerably reduce the danger of the spread of epidemics throughout their camps. The laundry house is in charge of a woman who does the washing for all the men in the camp. There can be no doubt whatever that this method of washing enables the men to keep themselves cleaner and healthier than if the washing were left to their own inclinations. A fee of 75 cents a week is charged against each man

to defray the laundry expenses. In addition, any man in the camp, who is found to be suffering from an infectious disease is immediately confined to the isolation hospital. This method of dealing with diseases lessens the chances of an epidemic in the camp, which would result in partial or total cessation of the logging operations. The Schroeder Co. employ the services of a professional doctor who makes periodic visits to the various camps. His duty mainly consists of giving aid to any of the men who have been seriously injured during logging operations.

The various camps are linked together by a telephone service so that with this aid and the use of a sleigh and horse, which are always at his disposal, the doctor is able to reach the scene of the accident without any serious loss of time. A fee of one dollar a month is charged to each man to help pay for these medical attentions. The clerk at each camp is supplied with a small medicine chest, equipped with liniments and bandages which he issues to men that have received minor injuries. These factors just described, when considered collectively, greatly improve the sanitary conditions of the men in the camps. But they do more, for the knowledge of immediate medical attention, in case of injury or sickness, creates a feeling of security in each man as he goes to his daily work.

Construction of the Roads.

There is only one tote road, 1½ to 2 miles long, over which supplies are brought to the camp from the store-house on the shore of Kawigamog Lake. This is of rough construction and requires practically no repair. Three short sections of corduroy and one large bridge were necessary. The bridge spans a ravine in which a logging road is situated and, in order to allow the loads of logs to pass, the centre section is removed when the hauling season commences.

The main haul roads, two in number, were constructed in the natural drainage system of the land except in one place near the shore where it was found necessary to deviate from the ravine in order to get a more gently slope onto the ice. The maximum haul is about two miles with a continuous down-hill grade. The construction of corduroy and small bridges was necessary in certain places, where the road-bed was swampy and would not freeze enough to support a load of logs. By building small dams in other places enough water was held back to make long stretches of shallow lakes. No system of trams or railroads are used on any part of the operation except for the spur line mentioned before, between Pakesley and the saw mill.

The distribution of men is variable under different circumstances, but the following is an average division before hauling commences. Five gangs of three men each are employed in the operation of felling and bucking, with an extra men for filling saws. Each gang consists of one notcher or undercutter and two sawyers. Three gangs of fourteen men each, with a foreman in charge, are employed in the operation of swamping and skidding. Each gang consists of six swampers, three teamsters and five rollers. The road gang is in charge of a foreman, known as the buck beaver, and consists of nine men, including the foreman. Other labor around the camp not directly employed on logging operations is known as "expense labor," and includes one blacksmith, one handy man, one barn boss, one chore, one cadging man, one cook and three helpers, and finally the foreman and the clerk. Totalling up by operations we find sixteen felling and bucking, forty-three swamping and skidding, nine road-making and eleven "expense labor," making a grand total of seventy-nine.

The felling operations are carried on in the usual way, i.e.: The chopper notches the tree about a foot from the ground in order to direct the fall and prevent splitting of the trunk. The sawyers cut from the opposite side and keep the saw parallel to the notch unless they wish to draw the tree to one side. At times iron wedges have to be used to prevent the saw from pinching and to start the tree falling. When the tree is down the chopper measures off the log, lengths depending on defects, crooks, crotches, breakage and top diameter limit, allowing an overrun of 4" on each log. No swamping is done at this time except for limbs that might interfere with the cross-cut. These are knocked off by the chopper. The sawyers then cut up the tree as marked, using wedges, when necessary, to prevent binding. The length of the measuring stick must be checked daily, as the chopper is liable to chip off half an inch or so occasionally, and thus the overrun on log lengths would not be sufficient. Under favorable conditions each felling crew can make about 130 logs per day. This is, however, influenced by weather conditions and topography.

There are three gangs composed of 14 men each, under one boss, working continuously on this part of the operation. The six swampers prepare rough skidding trails from the skidway into the bush in an irregular fan system and then proceed to limb up the logs and prepare them for the skidding teams. In the meantime the rollers are building the skidway at the side of the haul road. A place with a slight slope to the road is most suitable, but the cost of construction increases with the steepness, therefore, very steep places should be avoided. Two logs are used as extensions to the skids and are placed firmly on the ground so that the teams can step over them and bring the logs on top. Two teams are used for skidding and one for decking. In the skidding operations one team goes to the right of the skidway and brings in one or two logs; then continues across the skids to the left, while the second team goes first to the left and then to the right. By alternating in this way they avoid the many turns at the skidway and save considerable time each trip. Both tongs and choker chains are used.

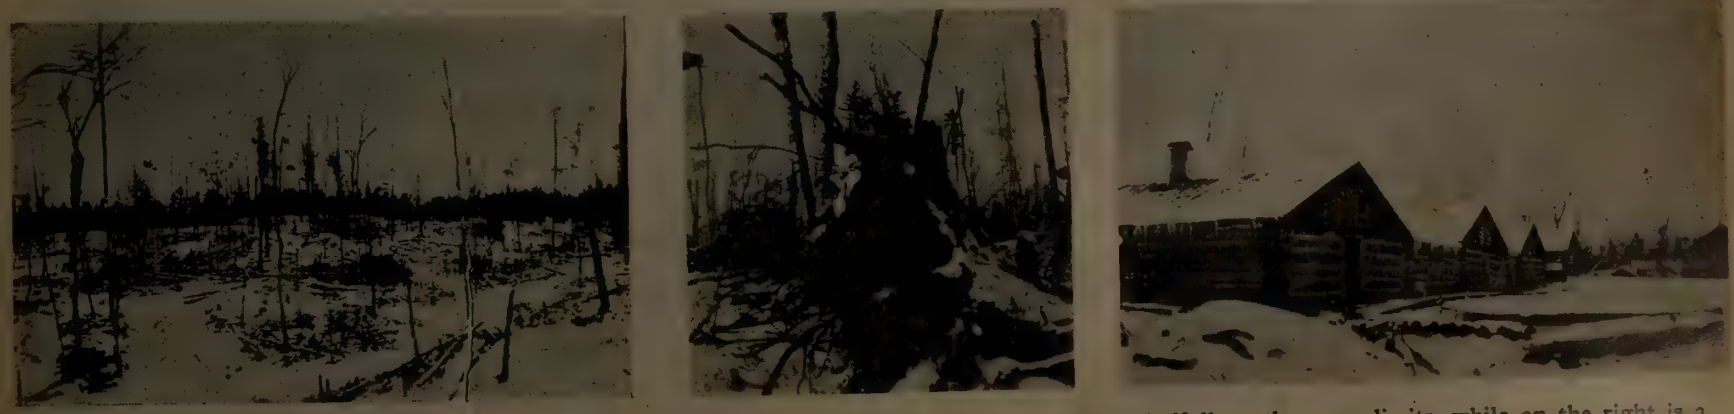
A licensed provincial scaler and his assistant are employed by the Schroeder Co. The equipment of the scaler consists of a scale stick, marked off in inches with the corresponding scale opposite each inch for the common log lengths. One end of the stick is provided with a steel head which enables the scaler to place the stick quickly and accurately on the end of the logs. The logs are tallied on a rectangular sheet of paper on which there is a column for diameter and separate columns for eight, ten, twelve, fourteen, sixteen, and eighteen foot logs respectively. The scaler keeps the tally of the logs and, with the help of his assistant, determines the length of the log in question and estimates the per cent. of cull, if any, to be deducted from the scale of logs as read off the scale stick. For convenience in tallying, a large pencil is used, at the one end of which is a piece of small lead, while at the other end is a thick piece of blue crayon. As the logs are scaled they are marked to prevent any possibility of recount.

Loading the Logs on Sleighs

Logging on the Schroeder limits is done solely for pine logs which will yield lumber. However, since at present the logs are driven down Lake Kawigamog where none of the difficulties of stream driving are to be met with, and since the logs are sawn into lumber in the company's mill, the diameter limit is low and the utilization is close. This very close, clear-cutting policy of lumbering the tract means only one thing, viz., that there will never be a similar cut of pine taken off this tract.

Every available team is used on hauling as soon as the work begins, and sleds having a six-foot gauge are employed. They are factory-made, except for the ten-foot bunks. Two logs are bound on, one on each side, by "corner-bind" chains. Then the centre is filled and the load built up half-way. Binding chains are then put in place and the load completed. Finally a chain is placed around the whole load. They usually carry from 50 to 60 logs per load which, with the average run of 50 f.b.m. per log, would make 2,500 to 3,000 f.b.m. The longest distance for hauling does not exceed two miles. Each team loads its own logs by means of a jammer and cable which operates similarly to the gin-pole.

The road-making and maintenance is an important item in this branch of the work. The roads must be kept in excellent condition throughout the season. After a heavy snowfall the plough is used, with special attachments for cutting ruts. Then the water sprinkler passes along spraying the rut, thus making an iced surface for the runners. The majority of the road work was done at night, with the aid of torches.



On the left is shown some broadcast burned timber of the Schroeder Co., in the centre a huge windfall on the same limits, while on the right is a view of the bunkhouses of the company

Fine Specimens of Canadian Woods

A splendid stand of western hemlock and Sitka spruce on the Queen Charlotte Islands. British Columbia is rapidly forging to the front as a pulp and paper producing province and has made wonderful strides during the past year or two.

Carload of wany white pine timber taken out last winter by Wm. Milne & Sons, North Bay, Ont., at Tomiko Lakes on the T. & N. O. 26 miles above North Bay, and sold to a Quebec firm of exporters. Wm. Milne & Sons logged about 35,000 cubic feet of white pine timbers last season and the average running length per stick was 45 ft.

Gravity railway 4900 ft. long with 690 ft. of a drop, built on spruce logs 3 ft. gauge track laid with 24 lb. rails. The line of steel was built by 69th Co. Canadian Forestry Corps, in Vosges Mountains. The gravity railway was designed and completed under the supervision of Lieut. -Col. W. H. Milne, North Bay, Ont.

Getting Out Timber in the Vosges

Loading spruce logs with horse-operated jammer by 56th Company, Canadian Forestry Corps, in the Vosges District in France, during the war.

The first sawmill built in the Vosges District, France, by the 28th Company, Canadian Forestry Corps, during the war. This plant was completed and in operation within eighteen days,—a remarkable achievement.

Large spruce logs loaded on cars by steam jammer in the Vosges District in France. This hoist also lowered the cars down the gravity line of railway,—another operation by the Canadian Forestry Corps in France.

Can Pile Over Sixty Million Feet in the Yards

Ideal Situation of Piling Grounds of Shives Lumber Company on Restigouche River —Extensive Operations of Progressive Eastern Lumber Organization

The business of the Shives Lumber Company, Limited, had its commencement when the late Kilgour Shives in 1889 moved to Campbellton from Dunsinane, Kings County, N. B., where he had operated a sawmill for some years, and purchased from the late A. E. Alexander the mill then operated by him where the present shingle mill of the Shives Lumber Company, Ltd., stands. Mr. Shives acquired large limits on the Restigouche at the New Brunswick Crown lands sale in 1893, and largely improved and extended the Alexander mill, which he continued to operate until 1902, doing business in his own name.

View of a portion of the large yard and tramways of Shives Co. taken from the top of the sawmill burner

He became associated with the American firm of Stetson, Cutler & Co. in 1902, when the Shives Lumber Company, Ltd., was incorporated. Then the company added to their holdings by acquiring from the Campbells, of Toronto, the lands which the latter held on the Kedgwick, a branch of the Restigouche River, under the name of the Muskoka Lumber Company, Ltd. This gave the Shives Lumber Company, Ltd., altogether 1008 square miles, of which 673 miles are in New Brunswick and 335 miles in Quebec. The company purchased the large farm containing some 400 acres, situated on the Restigouche about three miles above the town of Campbellton, known as Athol, and on it built the long lumber mill which has been running in season ever since.

The company purchased the mill equipment of the Morgan Lumber Co., which was situated at Glens Falls on the Hudson, and by rail removed it in its entirety to Campbellton, and the mill at Athol was set up exactly as it had stood at Glens Falls.

When it was first built the mill was made up of two Wickes gangs, twin circulars for cutting the stocks for them, a rotary with steam feed, nigger, and loader, three circular resaws and four lath machines, together with the necessary edgers, trimmers, etc. In 1913 the rotary was replaced by a double-cut band-saw, and one of the Wickes gangs was taken out and a ten inch Kendall circular gang was put in its place; the changes more particularly as regards the Kendall gang being most satisfactory.

The mill has sawn 349,000 ft. in ten hours, and has turned out forty millions of long lumber and twenty millions of laths in the sawing season, but of late years, on account of less efficient crew and lack of logs through inability to get woodsmen during the war, the annual output has been about thirty millions feet.

Convenient Location of Plant

The mill is situated on the Restigouche on a large level flat adjacent to the boom of the Restigouche Log Driving & Boom Company, Ltd., so that the logs as they are sorted and rafted can be put in the mill booms with little expense. The yard, which is just off the line of the Canadian Government Railways, is one of the best that can be found anywhere and is equipped with a three track siding for handling shipments to the rail market and for putting the lumber for water shipment alongside vessels lying at the Government railway wharf in the town of Campbellton.

The situation is ideal for drying stock, as it gets the full benefit of the westerly and north-westerly winds which are so common on the Restigouche, sweeping across the river. The capacity is very large and there has often been in excess of sixty million feet piled in the yard at one time. While much of the lumber exported by water is sent alongside vessels at the Government wharf by rail, the mill-yard has also the advantage of large loading docks on the river front.

The mill is also supplied with a large live run for putting the stock green from the saws down to scows at the wharf front, so that the scows can be loaded with lumber in large numbers for delivery alongside the vessels in the port of Campbellton, where at the Government wharf they can load twenty-two feet, or alongside the vessels at anchor at Point de la Garde, nine miles below the town where steamers of deeper draft move to complete the loading.

The company have at Shives Athol, an extensive supply store, large mill boarding house with accommodation for 200 men, together with forty workmen's houses, with stables; they also do considerable farming in connection with the industry. Situated on the property is a school which the company provide. It contains three departments, all under the Department of Education of New Brunswick, and there is also a joint Protestant church, a large Roman Catholic chapel and a moving picture theatre.

Where Cedar Logs Are Handled

The mill in Campbellton, which, on the construction of the long lumber plant at Shives Athol, was altered to the manufacture of shingles entirely, was destroyed by the fire which completely wiped out the town in 1910, and a new mill was built over the winter of 1910-11 and was ready for operation in 1911. This plant contains eighteen Dunbar shingle machines, two Perkins shingle machines, a two-saw railway tie machine, with re-saw for sawing boards from the tie slabs. Only cedar logs are handled at this plant and it is usual to pile sufficient logs on the wharf about the mill for sawing in the winter after the river is frozen over.

The large loading docks and shipping facilities of the Shives Lumber Co., Campbellton, N. B.

In connection with the mill are two spacious shingle storing sheds capable of storing easily twenty million shingles. The company have a big supply store in connection with this plant, together with several large warehouses, both on the mill premises and at their own siding on the line of the Canadian Government Railways two blocks away, where all their shingles and ties and their logging supplies are loaded. The output of long lumber has been largely sold heretofore in the British Argentine and

A close up view of the Shives Lumber Company's mill showing large quantity of logs awaiting manufacture

Australian markets, but since the war, owing to a scarcity of tonnage, the car market in the United States and Canada has been taking a large portion, which business for the past year has been largely handicapped by scarcity of cars.

The output of shingles, which has amounted to ninety millions in a year, is sold in Canada and United States markets where the well-known brand of Kilgour Shives stands very high, and considerable of the output also goes to the British West Indies. The cedar ties are sold to the large Canadian and American railroads, while the lath output is disposed of mostly in the United States.

On the death of the late H. H. Gunter in 1911 the Shives Lumber Company purchased from his estate the controlling interest in the William Richards Company, Limited, on the Restigouche, the company name being then changed to Richards Manufacturing Company, Limited. In 1913 the Richards Manufacturing Company, Limited, took over the Continental Lumber Company, Limited, at Riv r Charlo, N. B., from the Credit Foncier Canadian, of Woodstock, R. I., and at once assumed the management.

The same interests today thus control the Shives Lumber Company, Limited, the Richards Manufacturing Company, Limited, and the Continental Lumber Company, Limited, with together about 1660 square miles of limits in New Brunswick and Quebec.

The present officers of the Shives Lumber Company, Ltd., are F. B. Cutler, Boston, Mass., president; W. F. Napier, Campbellton, N. B., secretary-treasurer; Geo. C. Cutler, Boston, Mass., and F. C. Beatteay, Saint John, N. B., directors.

W. F. Napier is the manager of the company, the logging superintendent being F. M. Anderson, while the mechanical superintendent is John M. MacLean. Mr. Napier, who was the secy.-treas. of the Richards Manufacturing Company, Limited, from its commencement, became the president of the company on the death of Daniel F. Richards in September, 1919. Mr. Napier is also secy.-treas. of the Continental Lumber Company, Limited, president of the Restigouche Log Driving and Boom Company, Limited and chairman of the Restigouche Pilotage Authority. He began his business career at Bathurst, N. B., with the Merchants Bank of Halifax (now the Royal Bank of Canada) before he was 15 years old, leaving the bank to g with R. A. and J. Stewart as junior clerk. Mr. Napier remained with their successors in New Brunswick, the New Brunswick Trading

W. F. Napier, Campbellton, N. B.

Company, Limited, until he was transferred by them to Pierce and Company, Ottawa. When the late Senator Burns organized the Saint Lawrence Lumber Company, Limited, Mr. Napier went back to Bathurst with him and, on the death of the Senator, and after winding up the company's affairs, joined Kilgour Shives at Campbellton, N. B. The latter was killed in a gunning accident in 1905 and Mr. Napier succeeded him in the management of the Shives Co.

How Long Will Canada's Lumber Supply Last

World is Hungry for Timber and Its Products—Conservation of Resources is the Great Call for the Future—Protecting Young Forest Growth is Most Urgent Matter

By Hon. T. D. Pattullo, Minister of Lands for British Columbia

How much merchantable timber have we? This question is being asked today the world over. While I write, an Imperial Forestry Conference in London, England, is trying to find the answer, so far as the British Empire is concerned.

To the south of us, State Foresters and timber experts are seeking to provide Congress with an answer to the same question, as well as answers to further questions arising out of the leading query.

There has been considerable controversy in the various trade journals both as to stands of timber and the best methods of handling them economically. One expert makes an estimate, and another immediately produces widely different figures. That the experts differ is not the important point—that they are both making a genuine effort to arrive at a fair estimate is the vital fact.

One of the good results of the war is that a general stock-taking of natural resources is going on, and it has been found that this is particularly necessary in regard to timber. After four years of destruction, during which ordinary work was at a standstill, the world is hungry for timber and its products. How long will our visible suppy of raw materials last? Frankly, we do not know. Fortunately, we are trying to find out.

Hon. T. D. Pattullo, Minister of Lands, B. C.

Reforestation.

It has been a habit for years past to think and speak of our timber resources as being unlimited, with the result that we have been mining timber instead of cropping it, as is done for instance, in Sweden, where every available stick of timber is utilized. The unlimited supply idea has depleted Wisconsin forests; has left very little timber in Michigan, and is rapidly depleting the stands in the Southern States. It is estimated that the original stand of 650 billion feet in the Southern States has been reduced to 139 billion feet.

There is no occasion for hysteria, but we, in British Columbia, must look facts calmly in the face and lay our plans accordingly. We must, after careful survey, decide on the best methods of timber conservation.

Much is being said these days of reforestation and extensive experiments along this line are being made by some of the large pulp and paper companies in Eastern Canada. Experts are not agreed that the hope for the future lies entirely in reforesting. They seem inclined to the belief that it will prove rather as an assistance to the forest to reproduce naturally. In other words, that natural reproduction of the species native to each locality is the goal to be aimed at, but that, where necessary, nature should be helped out by artificial means.

In natural reproduction and rapid growth, the coast of British Columbia is peculiarly fortunate, thanks to her moist climate and mild winter. It is estimated that we have 97,000 square miles of productive forest land and that on most of that area young timber is growing after previous destruction of the crop by fire and logging. While it is true that much of this young forest is at some distance from present means of operation, by the time it has reached maturity distances will have been shortened, as they are being steadily shortened year by year. The important point is that the timber is there, while it is equally important that it should remain there.

The Enemy.

Timber's greatest enemy is fire, or rather man, for man is responsible or the great majority of our forest fires. This point cannot be too strongly emphasized, or repeated too often. While fires in mature timber are the most spectacular, and therefore most noticed, it is the young growth, on which the future depends, that suffers most. Repeated burnings in areas no longer able to reseed themeslves readily destroy reproduction for long periods of years, and result in bush and scrub growth where good, healthy young timber should be. The protection of this young growth from fire is clearly the most important factor in reforestation, and its care is not the duty of the forest ranger only, but also the duty of every citizen of British Columbia. The material welfare of many thousands of future citizens of British Columbia, is assured if our young forest growth remains intact from fire.

Pulp Development

As well as being lumber hungry, the world is paper hungry, and wood pulp is the base of the bulk of the paper consumed by the reading public. Publishers are alarmed regarding even the immediate future. Here, again stock-taking has been going on and some of the large pulp and paper pants in the East on both sides of the line are looking around for new sources of supply, while they are taking steps to conserve the pulpwood on their present areas

The search for new pulpwood areas is being extended to Laborador and Alaska, and, naturally, British Columbia is not being overlooked. On this coast the pulp and paper industry is already established on a firm basis and there is every prospect of rapid development just as soon as supplies of pulp and paper making plant are available.

There are large pulpwood areas in Northern British Columbia and in the interior of the province still untouched. The near future must bring about development in these districts.

Pulp Development.

In pulp, as in merchantable timber, we are still at the "nugget" stage, as it were, but the day of closer utilization is coming, just as it has in mining where the low grade ores are being treated successfully. In the older countries, the pulp plant is looked upon as being of the nature of a scavenger for the large saw mills, and it would appear that the day is coming when much of the woods and mill waste will find its way to the pulp digester.

The greatest value accruing from a discussion of our forest wealth and its future care and disposition is in the stirring of public interest on the subject. A man may make the wildest guess as to the future, yet he has succeeded in doing good if he has stirred up a controversy which entails devoting thought to our future welfare.

I feel satisfied that the various branches of the timber industry are thinking longer thoughts to-day in regard to the future of our forest resources than ever before, and I know that the officials of the Forest Branch are doing so. Much of the success for the future depends upon a continuance of the mutually helpful co-operative spirit which exists between the industry and the Provincial Forest Service.

Fire, which started shortly before midnight recently, destroyed the office, sheds, planing mills and kiln owned and operated by the Pearce Company, Ltd., Marmora, in Hastings County. Dwellings near by were slightly damaged. The Pearce Company's loss is roughly estimated at $25,000, partly covered by insurance.

Arousing More Interest in Canadian Woods

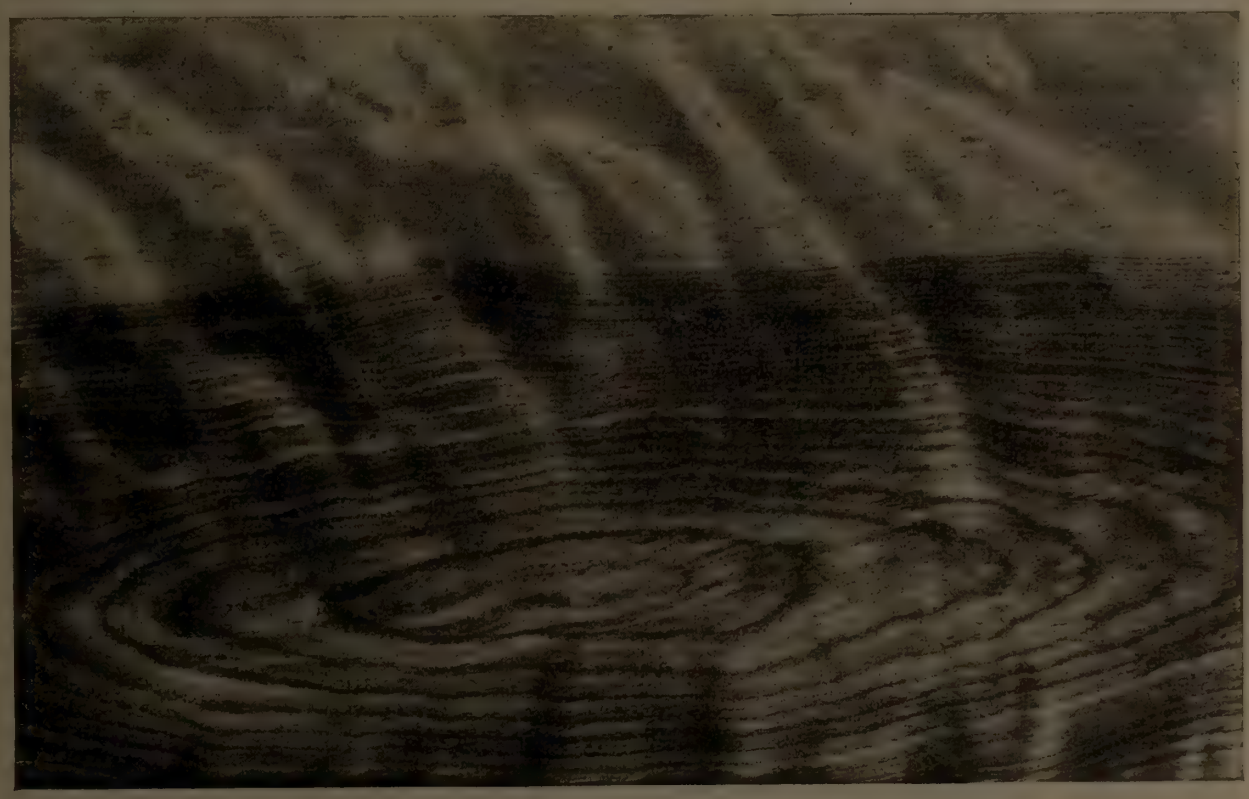
Birch Has Many Ideal Qualities and Takes an Excellent Finish—Other Native Woods can be Used with Splendid Advantage for Interior Work

By G. W. Brock

We have many fine woods in Canada, and it seems a pity to see them shipped out of the country by the carload, or if used locally, disguised, and sold as an imitation of some other wood. Such woods as birch, maple and ash do not need to be misrepresented, as they have qualities which should enable them to command a good volume of business if disposed of, in the open market, solely upon their merits. An author of a recent article did not go into the subject as thoroughly as he might have. He dealt with native woods solely from the point of the manufacture of furniture. A considerable amount of hardwood lumber is used annually for floors and trimmings in the numerous homes, banks and office buildings that are being erected on every side. The hardwoods commonly used for this purpose are nearly all imported and consist of oak, chestnut, and a certain amount of poplar.

There does not seem to be any logical reason why these particular woods are in demand for interior work other than that they seem to be popular favor. The public is supposedly fickle and their tastes can be educaed or influenced along any desired lines, so why should not the woodworkers engaged in manufacturing and handling building material and interior trim sell the idea of local woods rather than push the sales of any other variety.

Many woodworkers seem to be of the opinion that with the exception of birch, native woods are not to be had in sufficient quantities to make it worth while dealing in them. This is not according to facts and figures. True, Canadian-grown chest nut and oak are not any too plentiful, though if one were looking for these woods, he would be able to secure a few carloads from time to time. Such stocks as maple, birch, ash and elm are more abundant and a dependable supply is available to cover any anticipated demand. Birch is to be held in large quantities and is exported to the United States by the millions of feet. The statement has been made that fully 75 per cent. of the hardwoods cut in Canada are shipped out of the country. This is partly due to the apathy displayed by Canadian manufacturers toward native material.



Showing beautiful, wavy figure of curly grain birch

Let us consider birch for a moment. The many qualities of this wood are too well known to need any commendation. It is plentiful, may be had in any desired grade, seasons readily and takes a fine finish when machined. When finished properly it has a beautiful grain and takes an excellent finish—it must when it can be passed off as an imitation mahogany.

If this wood were to come into general favor for interior work, just think of the pleasing variety of effects that could be secured through its use. First, we have the white birch. This, when finished in natural shades, would make an ideal trim both in color and beauty and dignity of figure for the bedrooms, upper hall and the lighter rooms of the house. For the more pretentious quarters where the heavier furniture is installed, darker red birch trim could be employed. The color of red birch, if finished in natural, is one that works in and blends readily with the majority of color schemes. This is a feature that should be considered in choosing the material with which to trim a high-class house. Both red and white birch have a beautiful grain, one that gives a variety of figure and a pleasing contrast in a quiet, dignified way. It is neither bizarre nor loud and its introduction into any home signifies good taste on the part of the person responsible for the choice.

Another beautiful species of birch, though, perhaps not so plentiful, is the culy grained variety. The accompanying illustration shows the wavy figure of this wood. Curly-grained birch may not be available in large quantities, but one can usually secure enough for some select job where something unusually attractive is desired or for some choice line of cabinet work. One hears many laudatory remarks concerning the beautiful trim and panel work and the attractive effects secured in the Hotel Manhattan, New York. This hotel is finished throughout in curly-grained birch.

Ash has a fine, pleasing grain, and takes a good finish. It is used to a certain extent in interior work but should be more in general favor than it is. The American manufacturers of interior trim seem to realize the value of Canadian ash for house and office interiors, as many carloads of Canadian white ash are shipped annually to certain United States manufacturers. It would seem to be a case of where "A prophet is without honor in his own country." If there is sufficient ash available for export, surely there is enough to make it worth the Canadian manufacturers giving it their consideration.

One wood that appears to be growing in popular demand for house finish is British Columbia fir. It is found installed in many of our medium and better-class homes. The finish usually applied is a natural oil or varnish, though beautiful effects may be secured by using some warm brown stain and bringing out the high lights. This wood may be had in practically three grains, viz., edge, flat and curly grain and in any desired quantity. This latter grain gives a very pleasing wavy effect.

When the interior is to be painted or enamelled there are many woods that might be used. For high-class enamel work birch has proved itself to be the superior of any other wood. Its fine, even texture and absence of gum particularly adapt it for a smooth permanent enamel finish. Basswood, pine and fir are also used for enamel and paint work. With the more resinous woods difficulty is often experienced in preventing the rosin and gum penetrating through the paint or enamel. This can be overcome to a certain extent by coating all knots and any gum spots with a good, heavy shellac.

Finish up a few, good pieces of birch, ash, basswood and fir and the next time a customer asks for interior trim, show him these finished samples and point out the beauties and desirable features of the different woods. It may surprise you what a demand might be worked up of material in native woods by a little consistent thoughtful effort.

The Hardwood Situation in Canada and the Problem of Future Supply

By R. G. Lewis, Ottawa, Forestry Statistician, Canadian Forest Service

Canadian manufacturers, using wood as a raw material, are no doubt well aware of the limited supply in Canada of such woods as hickory, oak, walnut and cherry and they probably have a very good idea of the extent of the supply of the more common and more plentiful hardwoods, such as birch, beech, and maple; but it might be of interest to many manufacturers to outline the natural distribution in Canada of the more important hardwoods. In the first place it might be well to remind you of the fact that there are no woods of commercial importance found in Canada and not found in the United States. In most cases the supply in the Untied States of those woods which are common to both countries exceeds the supply in Canada.

On account of the rigors of the climate in the extreme northern part of Canada tree growth of all kinds comes to an end long before we reach the shores of the Arctic Ocean. The extreme limit of tree growth may be roughly indicated by a line drawn from the mouth of the Mackenzie River, southeast to the mouth of the Churchill River on the Hudson's Bay and following the shores of the bay so as to include the greater part of the peninsula of Labrador. South of this line the tree growth is represented by spruce, balsam, tamarack, poplar and jackpine; at first stunted and distorted by the extreme climatic conditions. Further south improving and developing into heavier stands which ultimately form the vast pulpwood resources of the Dominion in the East, and the local supply of saw timber in the northern parts of the Prairie Provinces. The only hardwood which might be of interest to the wood turning industry in this type is the paper or canoe birch. This tree is abundant throughout Canada but only reaches commercial sizes on the most favorable sites. The poplar species are also present and may in time become commercially important although they are at present looked on as tree weeds and are used only for firewood, rough construction and for wood pulp.

As we approach and cross the height of land dividing the waters of the St. Lawrence River from those of Hudson's Bay, we find a different type of forest. The white and red pines, the hemlock and cedar become important constituents of the forests, and the more valuable hardwoods appear in turn as we proceed southward.

Commercial Hardwoods Confined to Southern Parts

It should be understood that the hardwoods of Canada are largely confined to the southern parts of the provinces of Ontario and Quebes and to the Maritime Provinces south of the St. Lawrence River. West of the province of Ontario the commercially important hardwoods are almost entirely lacking from the existing forests. North of the Prairie Provinces the only deciduous trees are the poplars and birches. In the province of British Columbia, the forests are also almost entirely coniferous. There is a Pacific Coast oak, a birch and a maple which are sometimes sawn into lumber, but they do not occur in commercial quantities.

We may therefore confine our attention to the Eastern Provinces and commencing at the north we find the black ash and white elm the first important hardwoods to appear. These two trees are not found in quantity north of the Transcontinental Railway in Northern Ontario. In Quebec the northern limit of the black ash extends through the northern part of the province until it reaches the Gulf of St. Lawrence at Anticosti Island. The white elm in Quebec is not found north of the height of land. Both trees are found in the Maritime Provinces.

Birch Most Important Hardwood

The yellow birch which is Canada's most important hardwood at the present time, is more limited in its distribution than either of the preceeding species. It is not found in quantity west of Lake Superior. From this lake to the east its northern limit extends to Lake St. John in Quebec and also reaches the Gulf of St. Lawrence on Anticosti Island.

While the maple leaf is Canada's national emblem, the maple is not our most important hardwood. There are three species of maple of commercial importance in Canada, the hard or sugar maple and the two soft maples commonly called the white or silver and the red. The hard maple and the red maple are not found extensively north of Lake Superior in Ontario nor Lake St. John in Quebec. The white or silver maple is still more limited in its distribution, but is not so important commercially as the other two species.

There are a dozen or more oak species in Canada, the most important of which is the red oak. This tree follows the same distribution in general as the yellow birch and the hard and red maples. The white maple, the beech, the white ash, the basswood and the white oak are not found north of Sault Ste. Marie in Ontario nor the city of Quebec in Quebec Province. There are six hickory species in Canada, the most widely distributed being the butternut hickory which is found as far north as a line drawn from the neighborhood of Parry Sound through central Ontario and Quebec to Three Rivers in the latter province. The hickories are unknown in the Maritime Provinces.

Butternut follows the same distribution in Ontario and Quebec but reappears in southern New Brunswick. Black walnut and sycamore are confined to the western peninsula of Ontario, and a narrow strip of territory along the north shore of Lake Ontario, and are not found elsewhere in Canada. The tulip or yellow poplar, the sassafras, and the chestnut are found only in the southern part of this western peninsula of Ontario, chiefly along the north shore of Lake Erie.

Have Limited Distribution

From these remarks it will be seen that the distribution of hardwoods in Canada is very limited. The extensive hardwood forest which covers the central eastern states, extends northward, across the border, into Canada, but as it extends it loses tree after tree as the climate becomes more and more severe until the black ash, the poplars, and the paper birch, alone are left to weather the wintry blasts of the sub-Arctic regions.

It is not my intention to imply that hardwoods are extremely rare in Canada, but the fact that their distribution by nature has been so limited, undoubtedly indicates that the supply is far from being inexhaustable. It is a fact, however, that in the case of many species the original supply has been commercially exhausted. In the days of early settlement, such hardwoods as white oak, hickory, black walnut and cherry, growing as a rule on land well situated for agriculture, were cleared off by the settlers to make room for field crops. Whenever marketable they were used locally, in many cases finding their way into the humble snake fences and log buildings of the pioneers. Quite frequently the logs were burned in huge bonfires merely to rid the land of a useless encumbrance. The lumbermen have completed the commercial extinction of many of these trees and at the present time the small remaining supply is confined to isolated patches of trees or single specimens in farmers' woodlots. White ash, white and rock elm, hard maple, basswood, and the less valuable oaks have been exported in considerable quantities to the United Kingdom in the form of square timber but this trade has fallen off rapidly in late years.

Birch logs in a crib on the ice at Tomioko Lakes in Northern Ontario. These logs were taken out last winter by Wm. Milne & Sons of North Bay and are unusually fine specimens

The methods of logging in Canada have been developing chiefly

for the utilization of the coniferous woods such as pine, spruce, hemlock and cedar, and in Eastern Canada most of the transportation of logs from the wood to the mill has been accomplished by river driving. This method does not lend itself to the utilization of hardwoods, in connection with which the loss due to sinkage is almost prohibitive. On this account as well as on account of the small demand and the greater expense in connection with sawing hardwoods, the Canadian lumbermen in the past have paid little attention to the hardwoods except in those cases where the supply happened to be located near the mills. Owing to the great increases in the price of hardwoods, as well as other lumber, many of our lumbermen are now paying more attention to such woods as birch, beech and maple. In many cases they are building extensive logging railways for the purpose of transporting hardwood logs to their mills from limits long since cut over for pine and other conifers and temporarily abandoned. Within the next few years, we will undoubtedly see great developments in the production of hardwoods, such as birch, maple, beech, elm, and basswood, which are the most important of those which remain.

A few statistics on hardwood lumber production might not be out of place at this point. In 1917, the latest year for which complete figures are available, Canadian sawmills reported the production of 147,165,000 board feet of what are classed as hardwoods in our reports. (The term includes all trees other than the conifers whether their wood is actually hard or not). This production included wood of the following species and groups of species:

Birch 60,000,000′; maple 21,000,000′; elm 19,000,000′; beech 16,000,000′; basswood 15,000,000′; poplar 10,000,000′; ash 7,000,000′; oak (including all species) 2,000,000′; other species (including cherry, chestnut, butternut, walnut, etc.) 400,000′.

These figures of course include only sawn lumber and do not include material taken in the form of bolts, billets, blocks, logs for export as such, square timber, nor cordwood used for fuel or for wood distillation.

Imports Greater Than Exports

Unfortunately, our customs, trade and navigation returns do not show the exports and imports of wood products by kinds of wood. With regard to oak, however, a comparison is possible. Canada produced in 1917 only 1,894,000 feet of oak lumber, and during the same year imported from the United States 34,484,000 feet. In the cases of hickory, cherry, walnut, chestnut and to a less extent of ash, the importations exceed the production of sawn lumber. In addition to sawn lumber, Canadian manufacturers imported in 1917 partly-manufactured products, such as rough-sawn felloes of hickory, handle, heading, and stave bolts, hickory billets, hickory and oak spokes, rough sawn or split hub blocks, last blocks, wagon blocks and gun stock blocks and other hardwood, in an unfinished state other than sawn lumber, to the total value of more than a million dollars.

If the supply of hardwoods in the central states is now showing signs of falling short of the demand, the American manufacturers should not rely too much on Canada's forests to make up the deficiency, except, to a limited extent, in the case of yellow birch, beech, maple and basswood. In the event of a shortage, the manufacturers using hardwoods as a raw material on both sides of the border are faced with the problem of insuring for themselves a supply of such material for the future. This naturally brings up the question of scentific forestry and the growing of forests for the future. We are asked the question," How long does it take to grow a tree?" The answer cannot be given in so many words, and if made too definite, is rather apt to lead to misunderstandings. The rate of growth of trees varies with each species, with the climate, the soil, the exposure and the character of the mixture of trees in the forests. Figures can be quoted for growth rates in certain definite places under certain conditions but averages and generalizations are of doubtful value. As a general rule, trees grow more rapidly in mild climates, and the rate of growth of the hardwoods in Tennessee is no doubt more rapid than in Ontario or Quebec. Generally speaking, the hardwoods of Canada are found on better soils than the conifers and in cases on soils which are more valuable to the country for agricultural purposes than for the growing of trees. It can hardly be expected therefore that plantations made at the present time on waste lands will result in trees of the same size and quality as those now being cut on potentially agricultural land. Certainly, the rate of growth will not be so rapid, and figures based on measurements of trees now being marketed will not apply to the new plantations made on less favorable sites. It would be quite safe to say that plantations from seeds or young seedlings set out on non-agricultural lands in Canada will not produce yellow birch, beech, or hard maple of ten inches diameter in less than a hundred years. In the case of paper birch, this estimate might be reduced to 80 years, and in the case of aspen poplar to 70 years.

Now, these figures may sound discouraging, but it should be born in mind that we have in Canada many thousands of acres of timber berths from which the conifers have been removed, leaving the hardwoods as seed trees. This has resulted in a heavy seeding of hardwoods, and the young forest now establishing itself is composed of a majority of trees of these species. Depending on the extent to which the limits were cleared, and the time which has elapsed since the clearing, the young growth of hard woods has reached a certain development. In many cases where forest fires have not destroyed the reproduction, this second growth has already reached commercial size, and new areas will grow into this condition each year if properly cared for. Therefore, it is not altogether a question of starting over from the beginning to replace our hardwoods, but of applying scientific principles to the care of the young forests already established and above all, of protecting them from fire and careless utilization.

Substitute Native for Imported Hardwoods

With the object of gathering information which would be of value in solving the problem of the future supply of wood for our industries, the Dominion Forestry Branch in 1911 began a systematic investigation of the wood-using industries of the country and gathered data on the kinds of wood used by different manufacturers, the amount consumed in an average year, the sizes and grades demanded for different purposes, the price paid for this raw material, and the sources of supply. These studies covered the provinces of Ontario and Quebec, three Maritime Provinces of New Brunswick, Nova Scotia and Prince Edward Island, and the three Prairie Provinces of Manitoba, Saskatchewan and Alberta. It was intended to repeat the studies of each of these regions and to include British Columbia, returning to each region once every five years. The war interfered with the carrying out of this program, but it is planned to resume the investigation to date, that a great part of this importation could be of the investigation up to 1915 when it was temporarily abandoned, were very satisfactory. An idea was gained of the needs of the Canadian manufacturers in this respect, and a great deal of valuable information was published in reports covering each region treated.

The question of substitution of native woods for those imported from other countries was dealt with particularly in the case of hardwoods, where the importations are especially heavy. While I do not pretend to be enough of an expert in wood manufacture to advise selection of raw material, I am convinced, from the results of this investigation to date, that a great part of this importation could be avoided by the use of home grown timber. Materials of a certain quality from a certain source are demanded by certain industries. In many cases, this demand is based, to a certain extent, on custom or usage and not altogether on the qualities of the material as related to the use to which it is to be put. In many cases, a cheaper wood from local sources would serve the purpose of a manufacturer equally as well as the imported material. As distant pastures are forever green, so material brought from a long distance often acquires a reputation out of proportion to its actual or intrinsic value. In he early days, when lumber was cheaper and more abundant than at present, manufacturers were able to pick, for each part of their final product, the wood best suited for that particular purpose. The finished article, like the "Deacon's One Hoss Shay," had no weakest point and lasted in its entirety until it finally all fell apart at once. The increased cost of lumber has forced modern manufacturers to abandon this policy to a certain extent where the public has found that cheap replacement is more economical than maximum quality at a high initial cost.

The question of utilization of waste was also dealt with in this investigation. In some cases, it was found that a manufacturer was burning, under his boilers as waste, small pieces of wood of the same size and quality as another manufacturer was using in the same town as a raw material for his product. Instances of this sort were, of course, rare; but we were able in many other instances to put manufacturers into touch with one another to their mutual benefit. It usually happens that the watse from one factory is of many different sizes and shapes, and in such a case, it is almost impossible for such material; but any manufacturer who has waste material of uniform size and quality, no matter how small, should make an attempt to locate a purchaser of such material before destroying it. The Forestry Branch frequently receives inquiries from manufacturers with waste to sell and others looking for small sized material, and it is prepared to do all in its power to assist in this form of economy.

The Forest Products Laboratories established at Montreal in connection with McGill University has a staff of experts whose services are available to the public for the purpose of solving technical problems in connection with the anatomy, chemistry, mechanical properties, decay, preservation and utilization of forest products generally. Information obtained by research or collected in the library is at the disposal of the public at any time. Our head office staff is also ready and willing at any time to answer other enquiries from lumbermen and wood-users.

Mr. Retailer! How Do You Receive Salesmen

Great Majority of Lumber Dealers Are People Worth Meeting But There Are Some Whose Qualities of Honor, Courtesy and Ethics Are Below Par

By A. O. Fisher, Barrie, Ont.

A. O. Fisher, Barrie, Ont.

WITH a view to giving the retailer a little better insight into the life of the men calling on them in the various cities, towns and villages on the salesman's territory, I am penning a few stray thoughts. Frequently the traveller on his calls has very little time at his disposal to talk anything but business. After reading this the retailer may change the opinion that he has formed and come to the conclusion that the salesman as well as the retailers have their share of troubles.

Numerous retailers of lumber have an idea that the salesman's main business is jumping from place to place and living on the best in the land. If they tried it out and stayed in some of the hotels in the smaller towns and found a comfortable bed, with damp sheets awaiting them, minus blankets, on a cold winter night; if they had to arise at 4.00 or 4.30 a.m. to catch a train; if they had to eat the wonderful and fearful things provided by a chink cook, at least, eight or ten times per week, Mr. Retailer would sigh for home and the good cooking that his wife provides. The traveller is too busy to go over his troubles when calling on his customers. He is out for business and no matter what his troubles are, he keeps them to himself.

In view of the time it takes and the expense of travelling, as well as the many discomforts encountered in these days of standard hotels, it certainly takes the heart out of the salesman, if, when he makes a call on a prospective customer, he is informed that the customer is too busy to see anyone to-day. There are not many yardmen of such a type, but there are some. The greater number of the retail dealers are people worth meeting,—good, sociable men, on whom it is a pleasure to call, even if an order is not landed each time a visit is paid.

Men Whose Whole Thought is Price.

There are as many grades of retailers as there are of pine. The dealer who will question a salesman on prices of the different grades that he has listed, and when the information is obtained, will then inform the representative that he has bought a block of local stock at a much lower figure than he(the traveller) quoted, and that there is nothing on his list that appeals to him,—well, such a man is in the same class as the one that is too busy to see the salesman.

Then there is the bargain hunter. There are men (not many) in the business whose whole thought is price. If an article is cheap, that is sufficient, at least, until the commodity arrives, forgetting that a good article is worth the market figure and that if it is listed below that, there is a reason. The goods are of low value.

There is the good, honest, square customer, and he is in the majority. He is satisfied with what he gets if he obtains what he buys. He is not in the class with the one who buys mill run white pine and expects to receive common and dressing.

Then there is the dealer who does not play a square game with the wholesaler and will not hesitate to cancel an order on a declining market. He will surely hold the wholesaler to a bargain on a rising market, even if for some unforeseen circumstance the mills fall down in supplying the stock to the wholesale firm.

Regarding the salesman, he is expected and should have a pleasant manner, no matter what tribulation he suffers. If he has a disagreeable experience in one lumber office, he must forget it before he calls at the next office on his route. He should have sufficient knowledge of the commodity he is selling that he can give an intelligent description of the various grades on his list.

He is the medium between the wholesaler and the retailer, and in making adjustments should be fair both to the customer and fair to his employer. The salesman, who would make too liberal an allowance in an endeavor to retain the customer's goodwill, is not strictly just and honest to his employer. Such a man is liable to lose the respect of the people on whom he calls.

Don't Misrepresent and Don't Knock.

He will not wilfully misrepresent the goods he is selling. If he does, he is making a whole lot of further trouble for himself and the firm he represents.

There are various methods employed by salesmen to obtain business. One method adopted by a certain class is to knock a competitor and his goods. This is a sure and certain way of helping the competitor that they seek to eliminate.

The salesman realizes the retailer is a business man and a human being, and approaches him with this in mind.

The salesman is also human, and if the retailer is not in the market when called on, and treats the traveller civilly, he will reciprocate by giving free gratis plenty of useful information gathered on his trips which may benefit the dealer in his business to a very great degree.

No Taxes There and No Profiteers!

A land of no taxes.

A land of plenty.

A land where the maximum working day is limited to two hours.

A land of no profiteers.

A modern Mayflower is about to set sail from England. The pioneer party is limited to one thousand persons. The only conditions are these:

One must be good tempered.

One must be worldly possessed of one thousand dollars for the initial expense.

The pilgrims will be seeking to escape from the stranglehold of the profiteers and the tax gatherer. Their destination is the Marquesas Islands in the Pacific.

Enter William Penn in the person of T. F. Rhodes Disher, organizer of the expedition, who is a fellow of the Royal Geographical Society, London, Eng. His message to the over-burdened, broadcasted throughout England, is:

"Enough of this world of profiteers and self-seekers. Come with me to the beautiful Marquesas where everything is free for the taking and live the simple life under a tropical sun. Evening dress is barred.

"There are about three thousand natives in the islands and I would describe them as thorough gentlemen. For nourishment there is the choice of fish, fruit, vegetables, eggs, poultry, pineapple and mangoes with copious draughts from the cocoanut groves.

"We will market our produce on the co-operative system and the timber of the islands will provide our dwellings.

"There are no salaried officials.

"If I receive a thousand applications the pioneer party probably will start in a few weeks.

"I want to build a white man's paradise and I want only good-tempered people with a stake of one thousand dollars to join me."

Mr. Disher declares there will be no taxes to pay. He guarantees the maximum working hours for self-sustenance as two per day.

British Capital for Canadian Pulp Mills

It is fully anticipated that one of the most important concrete results of the Imperial Conference, which recently concluded its labor at Ottawa, will be the early investment of heavy sums of British and Australian capital in the erection of pulp mills in the Dominion.

The question of paper supply is probably one of the most acute problems with which the Empire press, especially in the Antipodes, has to deal.

Papers in Australia and New Zealand are compelled to pay over $500 a ton for their supplies and have difficulty in securing an adequate amount at any price. Keen surprise was manifested by delegates at the intelligence that of the money invested in the pulp mills in Canada, only ten per cent. was English capital. As a matter of fact, no single mill in the Dominion is controlled by British interests. Five mills are in Canadian control. The others are exclusively in American hands.

How Timber Testing in Canada is Conducted

The Empire's Greatest Wood Producing Dominion Should Lead in Development of Economical and Efficient Use of Her Vast Forest Resources

By L. N. Seaman, M.A., B.Sc., A.M.E.I.C.*

Early in 1914 began the realization of a dream of some public-spirited men, men of foresight and vision, when the Forest Products Laboratories of Canada came into existence. It had not been an easy task to inaugurate these Laboratories. Their necessity was not appreciated, and it was only at the expense of untiring effort and devotion to the best interests of Canada's great forest resources that, after many disappointments, these men were able to see the young institution undertake its important work.

The Laboratories were organized under the Forestry Branch of the Department of the Interior, to work in co-operation with McGill University. In their present form they comprise four departments, or divisions.

A mine boom after testing in the 200,000 lb. Wicksteed machine
These tests were used to compare the value of six different species for Mine Timbers

The Division of Pulp and Paper deals with problems relating to pulpwood, pulp manufacture, and paper manufacture.

The Division of Timber Physics deals with the anatomy, structure and physical properties of woods, an expert knowledge of which is the key to a host of problems encountered in their industrial utilization. The Pathological Branch of this Division makes a special study of decay in buildings, etc., and of the best methods of combatting conditions conducive to decay.

The Division of Timber Tests conducts research into the strengths of the various species, the particular uses to which different varieties of timber are especially adapted, and problems relating to allowable stresses, grading rules and specifications.

The Division of Wood Preservation carries on a study of preservatives, methods of preservative treatment of lumber, and problems in fire-proofing timber.

It is the writer's present intention to discuss briefly the work of the Division of Timber Tests, and the reader is asked to bear in mind that this is the work of only one part of the institution, and that equally important and valuable work is at the same time being carried on by the other three Divisions of the Forest Products Laboratories of Canada.

The Division of Timber Tests began in 1914, a comprehensive study of the strength of all Canadian-grown timbers, carrying on its research in the Testing Laboratory of McGill University. Here were available the regular testing equipment of the University, and in addition, two new machines installed by the Forest Products Laboratories. Representative trees from various stands in Canada are selected and shipped to the Laboratories. There they are sawed up under observation in the Laboratories' own saw-mill, and suitable small, clear test pieces prepared in the Laboratories' own up-to-date woodworking shop. Tests are made of all the various strength functions of importance in the commercial u tilization of the wood,—in bending, static and impact; in compression, both parallel to, and at right angles to the grain; in hardness, shear, cleavage and tension. These tests are made on small clear specimens in order to eliminate the uncertain effects of knot, shakes, and other defects, In this way a reliable comparison of various species is obtained, and data secured as to the effects of locality where grown, position of the wood in the tree, effects of seasoning, etc. These results, combined with the results of other tests made on structural sizes in commercial grades furnish the most reliable guide as to what may be expected of the timber in use, and what provisions should be contained in grading rules.

Testing small specimens in static bending
Thousands of such tests have been made on twelve Canadian species

Douglas fir was the first species tested, and the results of this investigation have been made available to the public in pamphlet form—"Bulletin No. 60, of the Forestry Branch of the Department of the Interior—Canadian Douglas Fir, Its Mechanical and Physical Properties." The information contained in this Bulletin should, in the writer's estimation, always be supplemented by that found in "Bulletin No. 59, of the Forestry Branch of the Department of the Interior—Canadian Woods for Structural Timbers," also prepared by these Laboratories. These publications should be found among the books of every dealer who handles Douglas fir.

Establishment of Branch in Vancouver.

During the war, when the demand for Sitka spruce, used in the construction of aeroplanes was great, and it was necessary to test quantities of this timber as rapidly as possible for war purposes, a branch of these laboratories was started in Vancouver, B.C., under the Imperial Ministry of Munitions, for this purpose. To avoid delay on this war work the machines from the Montreal laboratory were shipped at once to Vancouver, and later replaced by new machines. Since the close of the war the Vancouver Laboratory has been maintained as a branch of the Forest Products Laboratories of Canada under the Forestry Branch of the Department of the Interior and is working in co-operation with the University of British Columbia. The parent laboratory in Montreal and its branch in Vancouver have already between them tested ten species of Canadian timbers. They are now working on jack pine and western hemlock, and it is the intention, ultimately, to supply reliable information on all Canadian species.

But this is only one phase of the work of timber testing in Canada. This is the routine work and is so arranged that portions of the staff may, as occasion requires, be withdrawn from it and enabled to engage on special research work in order to obtain light on particular problems raised by the industries. A good example of this is the work done by this Division in testing mine timbers. To make comparisons of the species used, to examine the properties of possible substitutes, to determine the effects of different methods of seasoning, and the influence of defects commonly found in mine timbers —knots, shakes and the like— hundreds of tests were made on pit props, caps and booms in commercial sizes. These investigations showed, among other

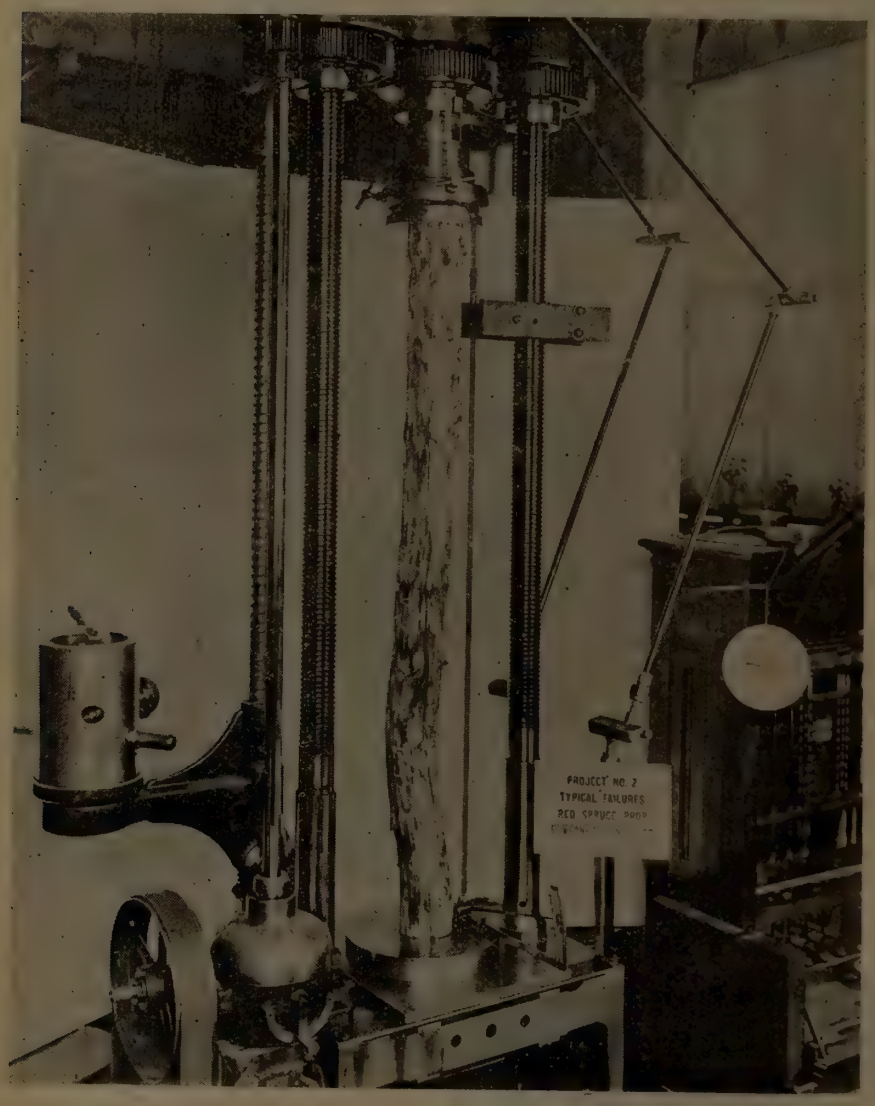
*Chief of the Division of Timber Tests, Forest Products Laboratories of Canada, Montreal.

things, that while jack pine would make rather inferior booms, it would, in point of strength, make excellent props.

The Use and Scope of Laboratories.

Examples of this kind of work at the Laboratories could be multiplied, but it is only necessary, at the present time, to indicate a few of the ways in which they have been and can be useful to the timber using industries of Canada. Sometimes an inquiry may be answered at once from the results of tests already made, but if not, the laboratories are always ready to make new tests and establish new reliable information. Already they have dealt with such questions as: Are certain grading rules satisfactory for Douglas fir? Can red and black spruce be used in certain building construction where formerly hard pine was used, and if so, what rules should govern their use? What woods are suitable as substitutes for oak and black walnut in the construction of telephone sets. Can Sitka spruce be used for tanks? What may be used instead of southern pine for implement poles? Is any other wood, so far as is now known, suitable for gun stocks instead of black walnut? So hundreds of examples might be quoted.

The Forests Products Laboratories of Canada are not an experiment. For ten years their exact counterpart has existed in the United



A mine prop tested in the Emery Hydraulic Machine
Tests of this kind showed that Jack Pine makes strong Mine Props

States, and yearly grown in importance and value to American industries. India has its Forest Research Institute which is this year being greatly enlarged. Australia and England are undertaking the same kind of work. Canada, the Empire's greatest timber producing Dominion, should lead in the development of the economical and efficient use of her vast forest resources. Nothing can help so much in gaining and holding this lead as efficient laboratories.

In conclusion, on the eve of my departure from them to continue the same work in India, permit me to make a plea for these laboratories. They are not widely enough known to the wood-using industries. They have been established with a great deal of effort, and at a considerable expense. They are meant to serve all the wood-using industries. Hundreds of problems arise that the dealer and the manufacturer have not the time nor the facilities to solve. For just these problems the laboratories are maintained. Unfortunately the man with the problem often does not even know of the existence of the laboratories. He must work without the information, and, in so doing may incur serious loss which might have been avoided. I have spoken here of the work of only one of the four divisions. The other three are equally important to the country, and what I would urge in this: that every effort to be made to inform all branches of Canada's industries directly or indirectly concerned with the utilization of forest products, that here is an institution—their own institution—whose work is to help in the solution of their technical problems, that they may get in touch with and co-operate with the Forest Products Laboratories of Canada, Department of the Interior, 700 University Street, Montreal.

The Big Drive in Order of the Hoo-Hoo

The annual convention of the Concatenated Order of Hoo-Hoo will be held in the Statler Hotel, St. Louis, on Wednesday, Thursday and Friday, September 8, 9 and 10. This will be the twenty-ninth annual gathering of the Hoo-Hoo and an elaborate programme of entertainment and instruction has been prepared. Members are cordially invited to bring along the ladies who will be well looked after by a special committee.

In regard to the annual dues, H. R. Isherwood, of St. Louis, secretary-treasurer, states that these have been increased from $3.65 to $5.00 annually, as the former levy has not been sufficient to permit the Concatenated Order to conduct its affairs and to maintain properly its prestige.

The present dues are decidedly insufficient to enable the organization to develop and to put into effect features that have been planned to increase its usefulness.

The Supreme Nine and members of the House of Ancients to whom the matter was entrusted by the 1919 Annual, announce through Snark of the Universe, R. A. Hiscox, their decision to advance the dues, effective for the ensuing year, to five dollars per annum. The advance does not apply to members past the age of sixty-five, their dues remaining at $2.40 per annum.

After September 9, 1920, candidates for reinstatement will be required to pay one year's dues ($5.00) in addition to the $5.00 reinstatement fee. Further restrictions to reinstatement are prospective.

The order has new plans for the future, and among the changes contemplated are:—

Placing greater restrictions upon the qualifications for membership.

Placing greater restrictions upon members in arrears for reinstatement.

Dividing each state into small districts.

To develop and promote in each district Hoo-Hoo clubs.

To compile and furnish ideas and plans for activities of clubs to bring the members and lumbermen together more often, other than Concatenations.

Establishment of Hoo-Hoo headquarters in each of the principal cities.

To provide a bureau of information in each Hoo-Hoo hotel for the benefit of members in good standing.

To revise rituals to conform to present conditions.

To revise Junior Book and add cross examinations for the different branches of the industry, such as will have a moral and will promote education.

To provide new additional equipment for initiation.

These are suggestions of just a few of the many definite, thoroughly-planned and entirely practical activities that will put Hoo-Hoo on a new basis in 1921. It will be lifted entirely out of the "joiners" type of organizations. Membership in it will rightfully be deemed a privilege.

No More Money to Loan for Houses

Over one thousand new homes will be erected this season under the provincial housing scheme throughout Ontario, and no less than $4,000,000 will be spent in this direction. The points most directly concerned in this effort to provide homes at a reasonable cost are Windsor, Ford City, Niagara Falls, London, Guelph and Ottawa. About sixty new houses are being erected under the scheme in the Township of York, where about $250,000 will be spent on the work this year. Twenty houses are being erected in the Township of Etobicoke, where about $100,000 is being spent on the work.

The best work in the province, according to the authorities, was done in New Toronto, where about sixty houses were put up at a cost of about $200,000. New Toronto is, however, not doing anything this year.

Most of the money loaned under the Provincial housing scheme was to men owning their own lots. The Provincial Commission, which received $8,750,000 from Ottawa, loaned $4,000 for brick houses and $3,500 for frame houses. The builder gave his deed for the land as security and the Housing Commission of the municipality in return gave back an agreement for sale. The local Housing Commission in town deposited its debentures with the Provincial Housing Commission as collateral.

The Provincial Housing Commission has no more money to loan.

Educating the Workers in Canadian Camps

Reasonable Day's Labor, Suitable Accommodation at Camps, Settlements and Factories, Insistence by the Universities that All Candidates for Arts' Degrees be Required to Spend at Least Two Years of their Course at Factories, Works and Camps, in Part Time Study, Part Time Teaching and Part Time Manual Labor, will Solve Problem

By Alfred Fitzpatrick, Toronto, President of the Frontier College

It has been said the problem of the twentieth century is to make education an engine of social betterment. Our systems of education help the literary class to an unfair extent. There is an unjust discrimination against those who work with their hands. The most distasteful part of many kinds of manual work arises not from the work itself, but from the treatment accorded those who are thus engaged.

There is almost unlimited wealth in our forests and mines. Nature has endowed our land, and without stint. The material resources which we possess are being developed with much industry and enterprise. Huge sums are being expended. But we are doing little if anything for the development of that greater resource, the humanities, the well-being of the men and women of frontier works. Is the wealth won from Nature to be appropriated by the self-seeking alone, or made a blessing to all, especially to those who bear the isolation and the deadening monotony of its exploitation.

Alfred Fitzpatrick, Toronto

The men who have filled the advance posts of civilization have hitherto been asked to make bricks without straw in that which is most vital to the development of their characters. They have borne the burden and heat of the day in the exploitation of vast industries. They have made free public schools, colleges and libraries possible by their labor, while as yet between themselves and the social and moral influences of civilization there is a great gulf fixed. This is—or should be—a matter of public concern.

The Obligation of the Employer.

The tilling of the soil, the felling of the forest, the manufacture of pulp, the mining of gold, and every other great work should be conducted with a view to the physical and moral health of the men engaged in it. The factory, workshop, camp should be a school and the employer in part a schoolmaster, principal, or college president to his employees.

Thirty years ago you might as well have looked for a needle in a haystack as for a foreigner in our frontier camps. You found there the sons of the Canadian homestead and the farm, as well as the English, Scottish and Irish immigrant. But our neglect of the frontiersman has driven the English-speaking men back from the first line to a seemingly more favored position. They have retreated to the older settlements, and more opportunities for giving schooling to a family. European races, men with an alien tongue, have taken their place in all construction camps, and to some extent in lumber and mining camps. Similar changes are taking place in the settlements of the clay belts of the north, and on the homesteads of the prairies.

For many years it was commonly asserted, by interested ones at least, that the men who do the rough work of the frontier camps are an unworthy class in most ways: Good-for-nothings, foreigners, a thankless lot, and given to dissipation. In whatever way, if any, our frontier workers are inferior to other citizens it is due largely to the conditions in which they are asked to toil. Manual labor without education is brutality. Have we as a people deserted the frontiersman? Shall we not as fair-minded, justice-loving Canadians try to atone for this neglect? That the men engaged in these industries, doing yeoman service to the country, isolated from all social, literary and religious advantages, should have educational facilities is of the utmost importance.

Cancer on the Educational System.

Intellect, soul and body must go together to form one well-rounded personality. We can no more divorce mental exercise and worship from manual labor than we can separate soul from body. The end is death in either case—the dying out of the vital spark—whether physically or spiritually.

"Nor soul helps flesh more, now, than flesh helps soul."—Rabbi Ben Ezra.

The tendency to this divorce has always been a cancer in our educational system, and may be traced to the speculative philosophy of an early time, which encouraged the development of the mind, and despised the body.

The object of life and the path of the highest good is service—to give rather than to get, to serve rather than be served. To attain that kingdom is to be honored, to rule, to reign. To share in it we are all called, clergy or laymen, employer or frontier worker. Those who labor themselves or use the labor of others for making money alone, miss life's mark. Men, not money, is the true object of life.

Too long have the universities emphasized the courses leading only to a profession: at one time it was the church, now medicine seems to monopolize the efforts of the schools. The time is now, that the universities pay back to the people in other activities a debt long due. Let subjects of practical utility be given larger recognition. Any frontier work, no matter where located, should be an outpost of the university. The settlement should be a homestead college; the walls of any university should be the confines of the frontier itself.

Education Must Be Taken to Camps.

The college must be taken to the camps and works. It is a fit task fo this young dominion to devise ways and means of getting it there. All that is required to transform our camps and factories into universities is to add cultural professional and vocational instruction to their curriculum which is already technical. Technical training they get at their own and their employers' expense in their several occupations; vocational training they get to a limited extent by shifting from one occupation to another at their own expense. They should, at least, have as much spent per capita by the governments on their vocational and professional and cultural training, as is now spent per capita on the technical, vocational, cultural and professional training of the regularly trained college man.

What we plead for is the diffusion of education, not the education of a privileged class alone. There is not too much spent on education in the cities, towns and other older settlements, but too little on the education of these denizens of forest and mine. What is needed is a system of education that will enable the laboring man to keep in touch with the outside world, and acquire an education while earning his daily bread.

More than ever in this century will education be approved in so far as it promotes the welfare of all. What greater problem confronts the whole Dominion than that of settlement: Not just spasmodic efforts by a few, but the proved, efficient scientific peopling of our own waste places, giving comforts and advantages to those who thus locate. Do our schools and universities at present assist constructively in this plan? Do they answer the cry, "Come North and Help Us."

It is not practicable to bring the great army of working men and women to the higher schools and college buildings. In fact. the great work of the world must be carried on, far from these so-called higher seats of learning. Instead of encouraging young men and women to leave their work to obtain an education as is now the fashion, let us bring the college-trained men in greater numbers to the frontier works, the camps, the factories and the settlements, and thus we will have closer the two extremes.

The Work of the Frontier College.

A close contact with the camps and frontier places of Canada for many years has convinced me that much more can be done to bring education to men of the camps. Given the proper incentive in the presence of good instructors and, even those whose hours of labor are longest, will accomplish much. Let the objeect of our life be "No day without a little." The instructor, going out from the universities of Canada will yet play a bigger part in the moulding for good of social changes. With this in view the Frontier College for twenty years has sent among mines, camps and extra gangs, on the frontier plac[illegible] of Canada, university graduates and undergraduates who have [illegible] as navvies and as other workmen among all classes of unskilled

laborers. During the last year 60 college men have been so engaged for a season each at a stretch. They win out by contact and personality—working at manual work during the day, and teaching at opportunity, where classes may be gathered—but at all times they stand for the best ideals embodied in Canadian life. A foreigner often meets in these camps his first healthy-minded Canadian in the person of the instructor who, to the amazement of the foreigner, is a laborer with him on the same tamping or skidding outfit.

It is true that success or failure of such work depends always upon the instructor; given a young man practical enough to jump in and work, who, while college bred is a mixer, even in uncongenial surroundings, and who has strength of character to stand for staunch and sane Canadianism at the outposts or our social life, and the work will succeed.

Some Obstacles in the Way

The following are perhaps the chief difficulties in the way:

1st. The hours of labor are too long for successful study.

2nd. The crowded bunkhouses are unsuitable for the best results.

3rd. It is next to impossible, especially in the winter season, to secure enough instructors for the task of bringing education to the man. The universities insist on too much class attendance.

But time, the great avenger, is gradually righting these wrongs. The fierce light that beats upon a throne is beginning to shine on these and other kindred problems. The old fallacy that education acquired by the help of teachers within four brick walls was good, and that any knowledge obtained outside these walls could not be dignified by the term scholarship, is being exploded. By curtailing the attendance required for a degree, the universities can, if they will, supply a sufficient number of instructors at subsidiary colleges. A great army of students and professors will in this way be released for work at branch colleges. At least, two years of the Arts course and a year or two for the Master's degree could reasonably be spent in absentia, the subjects of physics, geology, zoology, chemistry, botany not excepted. The apparatus required for these subjects, in the first year at least, is so small and so inexpensive that it could easily be provided. The students who wish to specialize in these subjects could take the advanced work of their courses during the two years spent at the parent universities.

Especially should graduates intending to enter the teaching profession be allowed to take their faculty work extra murally. A graduate or undergraduate studying for the profession of teaching could get more (and equally good) experience with classes of adults than with those of children in the cities. A well-known former public school inspector recently wrote me: "If I were asked by a teacher-in-training where he could best learn by experience how to educate others, I should advise him to spend a winter in a polyglot lumber camp as a member of your staff."

The universities are well able to do this. According to information obtained within the last four months from the respective universities more than 10,000 students enrolled are taking courses that well might be taken part time in absentia. In that case close on 1,000 lecturers and assistant professors thus released could profitably spend their whole time at study centres improvised at needed points.

By requiring that undergraduates in arts, forestry, education, theology and science take two years of their course and that medical students take their first year extra murally, and spend these at camps, factories, and other works, in part time teaching, part time study and part time manual labor, a very real step would be taken in the solution of the problem of how to bring higher education to labor.

Reducing the number of years' attendance required for a degree, on condition that the extra mural years be so spent, would keep up mutual intercourse and sympathy between the universities and workers. Instead of lessening the total number of intra mural students at the universities it would ultimately increase it many fold. It would then be possible for the worker to prepare matriculation at his work, to take part of his course at his work, and to go direct from his work to the central university. The university must thus become the leaven of labor and capital. It must interpret the one class to the other, and save society from extremists of both classes.

"Douglas Fir—Strongest Structural Softwood"

For all wooden decking, bulkheads and derricks on the new boats of the Canadian merchant marine Douglas fir is used. That Douglas fir is popular in the East is shown by the increasing volume of this material which is finding its way into the market. It is especially useful as heavy construction material and is largely used in mill building construction and needless to say timber construction is cheaper than concrete. There are two ways of cutting Douglas fir.

By Loren L. Brown, Toronto, British Columbia Lumber Commissioner for Eastern Canada

Douglas fir is found in Canada only in the provinces of British Columbia and Alberta, the amount found in the latter being very small by comparison.

"It reaches its best development in the region directly tributary to salt water between the mouth of the Columbia river and Seymour Narrows. With the exception of the giant sequoias and redwoods of California it is the largest tree on the Pacific Coast. It ordinarily attains a height of 175 to 200 feet and a diameter of 3 to 6 feet. Not infrequently trees up to 250 feet in length and from 6 to 9 feet in diameter are seen. Owing to its intolerance of shade, the lower branches soon die and drop off, leaving one half to two-thirds of the bole clear and a large percentage of the wood free from knots.

Stands in the Virgin Forest

"In the virgin forests on the Coast, where fir predominates, the stands usually run from 20,000 b. f. to 50,000 b.f. per acre, though frequently, on the better sites, the yield exceeds 100,000 b.f. per acre; one instance being recorded where 5,000,000 b.f. was cut from ten acres. Single mature trees ordinarily contain from 2,000 to 5,000 b.f., but, sometimes, exceed 10,000 b.f. In the mountains, the fir stands usually run from 5,000 to 15,000 b.f. per acre, though in some of the more moist valleys stands are found almost equal to those on the coast. In the interior dry belt the individual fir trees usually contain from 500 to 2,000 b.f."

(Forests of British Columbia," H. N. Whitford and R. D. Craig).

There is estimated to be 76,000,000 M board feet of Douglas fir in British Columbia. In 1919 the total cut of this species for the province was 841,605 M. board feet.

The uses to which Douglas fir is put are extremely varied, some of the main ones being included in the following list:—light and heavy building construction as joists, studding, beams, posts, flooring, interior trim, doors, and casings; bridge construction; derrick sticks and dredge spuds; piles and poles; ships decking, planking, keels and ribs; tanks, pipe and silo stock; cooperage and veneers.

The wide range of uses to which Douglas fir is put is due to its great strength, beauty of grain, durability, and the fact that it produces very clear lumber in exceptionally large sizes.

Douglas fir is widely recognized as the strongest structural soft wood in the world, with the exception of southern long leaf pine, with which it is given equal working values. For some purposes, as for example, in building joists where only a slight defection is allowable, Douglas fir is superior to white oak.

Loren L. Brown, B. C. Lumber Commissioner

Thousands of tests have been accurately made on both small and structural sized specimens of Douglas fir to ascertain correct working values which should be allotted to it. The United States Forest Products Laboratories situated at Madison, Wisconsin, have been established for ten years, during which time they have made upward of 500,000 tests on wood. Their bulletin, No. 88, entitled "Properties and uses of Douglas fir" contains the most authentic information available on the strength and structural sizes of this material. The results of a very thorough series of small tests on Canadian Douglas fir were published in 1918 by the Forest Products Laboratories of Canada. These tests proved that Canadian grown and American grown Douglas fir are of practically identical properties.

Much Evidence of its Durability

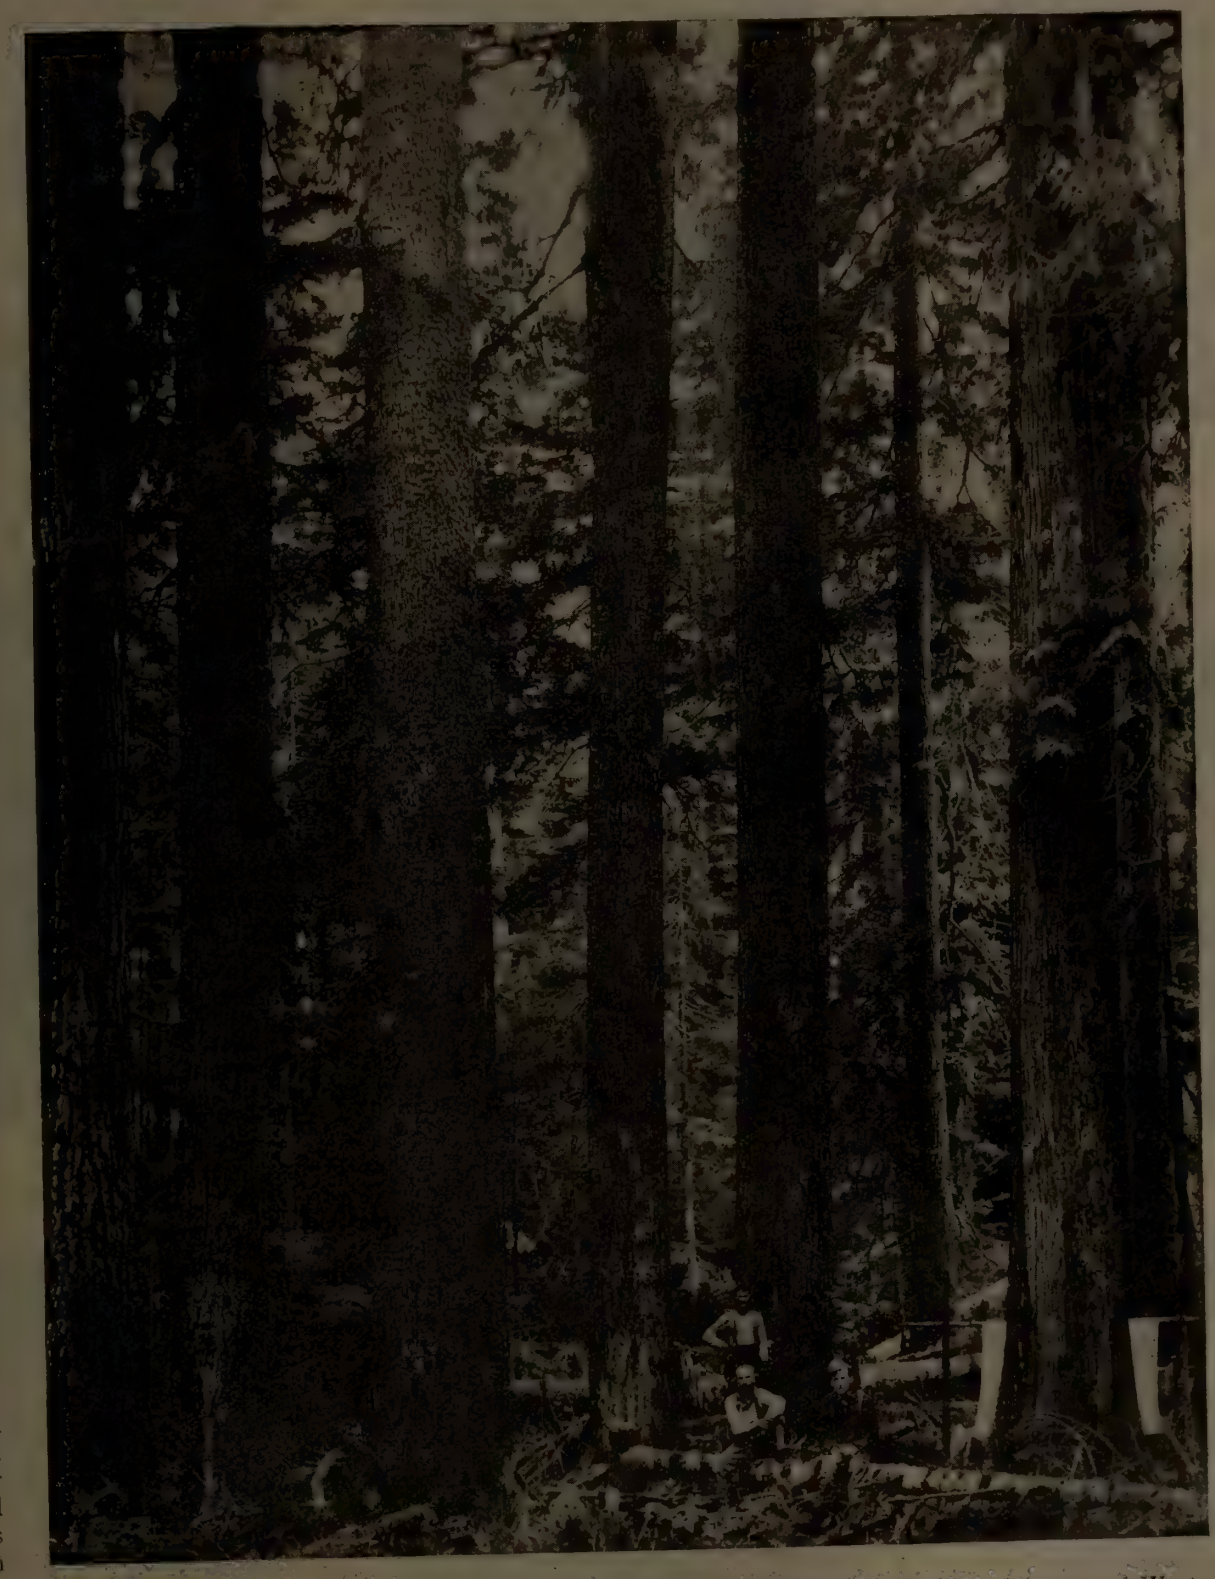
Some of the examples of the great durability of Douglas fir are to be seen in the numerous large rail-

way trestles which have been in use for long periods, and in some of the ships on the Pacific Coast; one for example, the "Lady Mine" built entirely of Douglas fir in 1879 at Port Ludlow and still in service between Vancouver and Prince Rupert. The fact that Douglas fir is recognized by the National Board of Fire Underwriters as a proper tank material is an evidence of its durability.

During the war an immense amount of this material found its way into boat and teroplane construction, the long clear sizes which could be obtained made Douglas fir especially desirable for aeroplane wing beams. Douglas fir is used for all wooden decking, bulkheads and derricks on the new boats of the Canadian Merchant Marine, and should give the very best service and satisfaction.

That Douglas fir is popular in the East is shown by the increasing volume of this material which is finding its way into this market. It is especially useful as heavy construction material and is largely used in mill-building construction, an outstanding feature of which is the recently completed Hobberlin Building on West Adelaide Street, Toronto, designed by Yolles & Rotenberg, architects. This building, in the construction of which 1,000,000 board feet of Douglas fir were used, is seven stories in height and contains 140,000 square feet of floor space. An interesting fact in connection with this type of construction is that the insurance rate on the building sprinklered is lower than the rate for a reinforced building not sprinklered, and but very little higher than on a sprinklered concrete building. Needless to say the timber is cheaper than concrete.

There are two ways of cutting Douglas fir, one to give edge grained material which is best suited for flooring, decking, stepping, etc., where hard wear has to be taken care of, and the other to give slash grained material which is prized as finish for the effect, in some pieces like watered silk, which is caused by the different colors of the "spring-wood" and "summer-wood" which make up each annual ring or year's growth.



Stand showing the four chief coast species—Douglas Fir, Western Hemlock, Sitka Spruce, and Western Red Cedar

It has been proved that the strength of wood varies with its density of dry weight per unit of volume which in each tree varies with its position in the tree as to cross-section and height in the tree. A stick cut from near the centre of a tree is weaker than a stick cut from near the outside. Also, a piece cut from near the top of the tree is weaker than that cut from near the butt, therefore, the strongest timbers come from the outside of butt logs. Low grade structural timbers, such as railroad ties, often come from near the centre of the log and high grade structural material, such as car sills and aeroplane wing beams, come from near the outside of the log. This latter material is generally clear because of the fact that ordinarily branches grow from the centre or pith of a tree out and, as the tree increases in height and the lower branches become shaded, they die off, the later wood forming over them being clear and of a high grade.

As stated, the strength of a Douglas fir stick is closely related to its density or dry weight per cubic foot. Of two sticks of equal dryness or degree of moisture content the heavier will be the stronger, provided they are of the same grade as regards defects, knots, shakes, diagonal grain, etc. This density may be estimated by a visual examination of the amount of the summer-wood in the annual or growth rings. Each year a tree adds an outside layer composed of wood formed early in the year called "spring-wood," and that formed later called "summer-wood." The early wood is composed of comparatively large open thin walled fibres which function as conduits for the passage of sap; the later wood is composed of thick walled elements which give the wood its strength. This wood is darker, more compact and harder, and appears as a dark yellow band. A tree having a large proportion of this wood is heavier and stronger than one having a narrow band of summer-wood and a large percentage of the spring-wood.

"Cross grain" may be due to two causes, diagonal grain or spiral grain. The former is caused by faulty sawing in that the saw cuts across the layers formed by the annual rings; the latter is due to no fault of manufacture, but to the fact that the wood fibres did not grow parallel with the main axis of the tree, but around it in a spiral. If the degree of diagonal or spiral grain is great, say more than one inch in twenty, the material in which it occurs is materially weakened. The degree of diagonal grain, especially in some sticks, is rather more difficult to detect. It is, however, readily shown on the slash or tangential face of a stick by the brown resin ducts, or in a dry stick by the season checks which follow the direction of the fibres.

The average oven-dry weight of Douglas fir is approximately thirty pounds per cubic foot; green material approximately thirty-eight pounds per cubic foot, and thoroughly air-dry material approximately thirty-three pounds per cubic foot. Douglas fir lumber weighs per M, b.m., approximately 3300 lbs., green and 2500, kiln dry.

The color of Douglas fir varies from red to light yellow. The red fir as a rule contains a high percentage of summer-wood.

Western Outlook in Lumber Line is Promising

Continued Expansion of Export Trade—Stabilizing Conditions and Abundant Wheat Crop Will Contribute to Revival of Business and Increased Demand

By George S. Perry, Vancouver

STEADYING influences have been making themselves felt in the lumber industry in the Pacific Porvince for the past month. Possibly some of those interested in the trade think that things are altogether too steady and slow for good business. On the other hand, while it is admitted that business is not rushing, there is a regular flow of orders and rail shipments are going forward at a fairly satisfactory rate. Of course, the export mills, or those which are handling export trade along with rail and domestic business, have had a constant demand upon certain portions of their output. In fact, the export lumber trade has shown its steadying influence all season. Developed to more than ordinary proportions and showing strong inidcations of continued expansion, the export there has been attracting more attention this year than ever before in the history of lumbering in British Columbia.

While the volume of trade being handled at the present time is not sufficient to compel the mills—on the coast at least—to run night shifts, there is no great surplus of stock. Various causes have prevented the piling up of any big yards of lumber. If the Canadian Northwest trade were to open up at all briskly, as it very well may do when crop returns begin to make themselves felt, the present stocks of cut lumber would not be sufficient, and there would be some scurrying to fill orders. The situation is that shippers are keeping in mighty close touch with their sales organizations on the prairies and before giving firm acceptances for any considerable lots, or for particular specfications, salesmen in most instances have strict instructions to get in touch with the head office to find out if the goods can be secured for prompt despatch.

Brisk Fall Business in Lumber.

Regarding the general situation in the Canadian Northwest, all reports are agreed—the outlook is excellent for a rather brisk fall business in lumber. But there is unison in the reports also that the retail lumbermen have their own burdens. They have been carrying a heavy load and they are determined to liquidate this fall, as far as possible. That explains in large measure the very tight buying they have been doing. It is agreed that the yards have scarcely kept a sorted up stock all season, doing business on as limited a quantity as it is possible to get on with. They cannot be blamed. There is no money in sight until the wheat crop is flowing into the elevators and the cash is coming into the hands of the farmers to be in turn handed on to the retail lumbermen. And they are not the only pebbles on the beach by any means.

It is scarcely a question of credits as between the lumber producers and the retail trade, that has held up ordering. There is not a reputable retail concern on the prairies but can have all the lumber they wish. They have simply held tight while the 1920 crop was shaping itself up. Not even the most optimistic government crop reports have made them budge. These men know the crops in their own districts like no government report can tell them. They know the men who are growing them and they know which of those men will want lumber. But till the crop is threshed and on its way to the elevator, what they don't know,—and neither does any one else,—is who is going to be able to pay for lumber. Right now every retail lumberman in the three prairie provinces could give a fairly good estimate, based on personal knowledge of the individual requirements of his district, of what lumber he will probably require this fall. But he will not book his orders on that knowledge. He prefers to take his chances of delivery when assurance is in sight..

Western Car Situation Fairly Good.

When orders are going forward at a satisfactory rate, as has just been stated to be the case, it presupposes that there is transportation in sight to take care of the business. That is the situation at the present moment. It is the experience of the trade generally that from two to four days is the average length of time in which a car number can be wired on orders received from the Western Provinces. That is very good despatch. For just how long it will keep up depends on two or three other factors. If the lumber trade should brisk up much and the number of cars to be shipped increase to say double of present shipments, the rate of delivery would perhaps slow down. Then, as every one is aware, the railways are at the present moment engaged in concentrating their rolling stock fit to carry wheat, at convenient central points on the prairies. Any lumber order requiring a box car to go to or near those concentration points naturally has preference. Until the concentration movement is completed and the cars have all been sidetracked at one or other elevator centre in the Northwest there is every assurance that lumber orders will have quick despatch.

But when the grain is rolling by trainloads to the big terminal elevators at the head of the Great Lakes, and every car that will hold wheat is pressed into the service, it will be another question. Then the railway equipment and service will be taxed to its utmost to keep the wheat moving in the short season before the close of navigation. It all depends on the crop, and all reports are that there will be a big crop to move. Big or small, the crop-moving operation each fall demands the entire energies of the railways as well as of the financial institutions of the Canadian West. Even lumber credits might momentarily suffer from the strain upon the resources of the big Canadian banking institutions for the ready cash to pay wheat checks with. For wheat is cash, and never is that fact more impressively hammered home than when the millions of bushels are being delivered daily to the hundreds of elevators at every rail point across the wide Canadian wheatfields of the Western Prairie Provinces.

Lumber Depends on Wheat.

Any one who wants an object lesson in practical finance, practical railroading, practical grain-dealing, practical harvesting and threshing, should visit the Western prairies at the height of the wheat harvest. There is no other thought in the entire Western community for the moment, than the expediting of the work of safely getting the wheat to market. It does not begin with the first hum of the binders, whose clicking murmur can be heard in a hundred thousand wheatfields across a stretch of seven hundred miles, nor does it begin with the first thresher's roar and dust-cloud. Weeks before the crop is ripe, when the railways begin to check up their box cars and get them headed to the wheatfields, the banking experts of the Canadian financial centres have it all figured out how many millions of dollars of real currency it will take to move the wheat crop. The entire banking system of Canada from coast to coast is for the moment directed to the problem of supplying that ready cash. For it must be on hand in unlimited quantities to pay the toll of the wheatfields of the Canadian West. The banks have become used to the annual preparation. They have the experience of thirty years or more to guide them. The law of averages helps them out in their reckoning, and while even banks have not an unlimited supply of ready cash, they can gather it in here and there in every little town and community over the Dominion and turn its current westward to meet the rising flood of wheat bound to the waiting world markets as fast as double-tracked railways and whaleback steamers can carry it.

The picture impresses itself indelibly on the mind of an observant visitor, who first experiences that intensified effort to garner the golden grain of the golden west in the busy harvest weeks of the autumn. On every hand he meets the same absorbed air of concentrating on one and only one object.

It is not the farmer alone, who with his men works from

early dawn till the dew stops the canvas carriers on the self-binder—the threshers too work every moment that there is enough light to handle the machine. As the hundreds of great wagon loads of new wheat roll in to the elevators the grain men are promptly on the job to take it in early or late. Every business man in every town and hamlet in the three great provinces of the Canadian West is vitally interested in the successful garnering of the golden shower. It is only comparable to the days of the spring clean-up in a great placer gold camp. No gold camp from Cariboo of early days to Klondike of twenty years ago, ever made a tithe the returns in one season that the wheatfields of Canada's golden west yield. Little wonder that the financial and transportation systems of the whole Dominion are for the time entirely devoted to the wheat harvest.

All of which may not be a story of lumber and lumber conditions in British Columbia. It has much to do with it, however. On the success of that great wheat harvesting operation now going on in the prairie provinces depends the bulk of the rail trade the lumbermen of the Pacific Provinces are going to do this fall. The east as well as the west is interested in the wheat harvest of the prairies, and in similar manner, dependent upon it. If trade is good on the prairies, then it will be better with eastern Canada than it otherwise would be. So the lumbermen are twice interested in the wheat harvest.

Rail Transportation to U. S. Market.

There is only one section of the rail trade which is not affected by the wheat harvest of the Canadian Northwest. That is the growing trade with the U. S. in the middle west. Just at the moment the supply of cars for the coming season is the controlling factor to a great degree. Pacific Coast mills on the U. S. side of the border are finding the car shortage a most serious handicap. For the present, with the light ordering which still obtains, the British Columbia mills have been able to give fairly prompt deliveries. A week, possibly eight days, in some instances has been the outside time that it takes to get a car away. Occasionally a car number can be given in three days. The Canadian railways are at this season firmer than ever in not letting their own rolling stock out of the country. On the other hand every foreign car is available and until demand increases materially these will likely suffice for reasonably good despatch.

One authority gives it as his estimate that the shortage of freight cars for U. S. railways is not less than 300,000 to meet normal needs of transportation, and until a substantial portion of this shortage is made good no real relief from the present car situation in the U. S. can be expected, he says. "For the indefinite future," he adds, "therefore, transportation must be reckoned as a severe handicap on all lines of business. Shippers will have to take into account delay in transportation for, at least, the remainder of the year." On the Pacific Coast, one American newspaper account states that the U. S. railways had despatched 1,400 cars in an effort to relieve the congestion in the lumber traffic. But, said the article in question, under ordinary normal conditions of the lumber industry of the Pacific Coast, British Columbia, Washington and Oregon require something like 17,000 cars per week. The Washington and Oregon mills are suffering severely from the shortage and unless they allow stocks to pile up in their yards, many of them will have to face a shut-down, as it will not be until after harvest, say two or three months hence, that any relief can be expected.

The Situation Across the Border.

In the meantime, the prospects of demand from the lumber markets of the middle west and eastern states are very promising. With a crop report as reassuring on the whole as that of the Canadian West, the United States lumber trade is anticipating something like a rush of orders late in the season. It is also reported that buying by retailers has been from hand to mouth all summer. Reserve stocks have not been ordered forward and that will clean up the stocks in the retail yards as soon as business picks up. The announcement of the advance in freight rates may have a stimulating effect on placing orders.

Foreshadowed freight schedule increases on all Canadian railways have so far not had any direct stimulating influence on orders from points east or west. It is just possible that that contingency may be over-calculated, for once a higher tariff comes in force every one would be on equal footing. Hence the steadily conservative buying of the past few months is not likely to be much affected by prospective higher freight rates .

Some little comment has been caused recently by the trend of log prices. Despite the strenuous efforts of the logging operators to hold the fir log market firm, prices have been breaking a little, though the reduction has not been sufficient to cause a re-adjustment of the lumber price schedule, for the simple reason that lumber quotations have been much closer than prevailing log prices have warranted. The drop in fir logs, estimated at $3 to $5 per thousand, according to quality, has not been officially made by the Loggers' Association. Mills assert that for really good booms they still have to pay the rates that have been held all summer, of $20, $25 and $30 per thousand. Cedar logs have firmed up somewhat, the price at which fairly good stock can be bought being about $31. Every one is not selling for those figures, however. Supplies of both fir and hemlock have been good so far, and cedar which showed a surplus is down to a much smaller visible supply.

Railroad Tie Production is Increasing

The normal demand for railroad ties is somewhere between 100 million and 125 million annually, says the recent U. S. Forest Service report compiled in response to the Capper resolution in the Senate. In 1918, purchases were slightly under 77,500,000, according to the report, and in 10 months of 1919 were slightly over 84,500,000. During the war and the period of government supervision of the railroads, extensions could not be made and improvements were necessarily confined to those of an urgent character. Lumber purchases were therefore at a minimum. Even under such a policy of retrenchment railroad purchases of sawed materials, excluding hewn railroad ties, telephone poles, etc., aggregated approximately 4½ billion feet or 14% of the total lumber cut of the country for 1918.

That there have been profound changes in the lumber distribution from different regions during the past year, continues the report, is shown by the invasion of the middle western and eastern states by Douglas fir ties. These are regions which in the past have been supplied with the standard oak tie cut immediately along the rights of way or with southern pine ties from the South. During 1919 orders amounting to nearly 100,000,000 board feet were placed for Douglas fir ties for eastern roads because of way and because of the excessive costs of local ties. In other words, oak ties cut within a few miles of the right of way and bearing practically no charge in freight and southern pine ties are now being replaced by fir ties hauled overland across the continent or shipped through the Panama Canal.

Forest Fires Drenched by Rain

The citizens of Porcupine are resting easily now. Rain, urgently needed and never more welcome, commenced falling and continued without ceasing throughout the greater part of a day, and the ground was so completely saturated with moisture that all danger from the bush fires which menaced the safety of the community has been banished, and no further fear is felt for the balance of the summer.

The rain came not a moment too soon. The flames, spreading from fires which had been smouldering for days and which were fanned into life, had approached so close to the town that the T. & N. O. station, the agent's house, the Connaught Hotel and a large number of residences in that section were threatened with destruction, and only untiring work on the part of the citizens saved some of the buildings. The battle was maintained for 48 hours without cessation. The women brought food to the fighters. The station at Golden City also had a narrow escape, the fires approaching within a stone's throw of the structure.

The countryside had been so dry from the continued lack of rain that the fires had an easy passage when the wind drove them ahead. On the first approach of danger men volunteered for service and the fire brigade turned out. Assistance was also sought in Timmins, Ont.

Some Reminiscences of Swedish Lumbering

By Anton Selander, F.E., Montreal

Anton Selander, Montreal

IN the northern part of the Province of Dalarue, Sweden, logging usually starts in November, when there has fallen a few inches of snow. At this time the thermometer shows about ten below zero, which is considered very cold in Sweden. Every parish in this part of the country has its own language, which is not even similar to the Swedish, and if one has not been brought upin that part of the country one cannot understand the talk of the natives. Luckily these people speak Swedish also.

I met an Englishman up there coming down from a fishing trip, and he said that his guide was speaking in his parish dialect, the Englishman answering in English, and that they understood each other perfectly. I think, however, that my English friend and the guide probably had passed some spring creeks, and perhaps tasted some of the water with something in it.

Anders & Erik had a contract for sixty thousand logs to be cut upon the crown forests near the border of Norway.

They had made preparations for a monthahead, getting choppers and helpers, and were starting to load up their bobsleighs. The sleighs in use are somewhat different from those used in Canada, in that the runners are only an inch and a quarter wide and the width between the runners is only 3 feet; but they have wings on the sleighs, and the bunks are generally five feet wide. The length of the first sleigh is six feet, and the second nine feet, coupled together by a chain.

One bright morning in the middle of November, Anders & Erik called their men together and everything was packed, and off they went with forty horses and ninety men. Now as Anders & Erik live in a parish called Rattvit, they had to have a man with a violin at the head of the gang, so they stopped at their old friend Jonas' house and got him with them as usual.

The distance Anders & Erik had to travel with their outfit was about ninety-five miles, and it took them four days to arrive at their destination, but violin and peasoup, along with something strong, kept everyone in good humor.

Arriving at the spot, the first thing to do was to get the Government man to blaze and stamp trees enough to build the camp and stables. This was done in the morning, and at four in the afternoon the camp was finished, to the extent of keeping the men warm.

The lumber camps there are made with bunks all around the walls, and with a fireplace of the same height as the bunks in the centre. This fireplace is usually six feet wide and long in proportion to the length of the camp. If the camp is very long two or three fireplaces are used. The outlet for the smoke is through a large opening in the roof of the camp, and this opening has a kind of a wooden chimney about eight feet high.

The next morning Anders & Erik blazed out the logging road with their axes, and after that the Government inspector stamped all trees necessary to be cut in the road, marked up the size of them abreast high outside the bark, and sent the bill to the company.

In the Government forest one cannot cut a tree except that marked by the Government stamp, and this stamp is put on a blaze breast high, and also on the root of the tree. The regulations compel one to put the logs so that the Government inspector can see the stamp on the first log in the tree, before anyone is allowed to scale the logs. The stamp near the root must be left on the stump in order that the inspector can see that no tree is cut that is not stamped.

Anders & Erik had had the road nicely cut up, and in one place it was necessary to dynamite a small hill to avoid any upgrade.

A week later snow fell about a foot deep, then came cold and clear weather, and the icing of the road was begun immediately. This takes considerable time, because some snow must fall after the road is iced. The snow is ploughed to the sides to form sidewalks for the road, these sidewalks also being iced. Such a road makes it possible to have narrow runners on the sleighs, and consequently less resistance for the horses to overcome.

The men that fell the trees go in gangs of two. The trees are cut with a saw three feet from the ground, and every tree is barked with a kind of chisel about five inches wide. The chisel has a handle, rather heavy, about five feet long, and a fairly large tree can be barked by two men, and branched in about two minutes.

When a few hundred of these have been cut down and barked, the company's checker comes around and examines the tree. He possessed an axe and on the back of the axe is the company's mark with an open back, so that when the checker applies the stamp on the trees the stamp is cut out of the wood and passed out through the open back of the stamp.

The checker puts on marks on every tree in the place where he considers they should be cut to logs to the most advantage, according to grade and size. After him come the men that cut the trees, and start immediately to convert them into logs where the checker has applied the company's stamp.

If the road is short only one sleigh is used, letting the logs drag with their other ends on the road. But Anders & Erik had a long road, so they had to haul their logs to what the Swedes call "lunbankar," which corresponds to our skidways, and from there the logs are loaded on the sleighs to be piled on the river bank. No logs are allowed to be piled on the ice in the river, because there is a possibility of their forming large jams in the spring, and also because they prevent the ice from breaking up.

About the fifteenth of December Anders & Erik wanted some money, so they requested the company's scalers to come and scale what logs they had hauled down to the river.

The scaler in Sweden is responsible only to his own company, but must be fair in scaling, otherwise the company would another year have difficulty in getting jobbers.

The scaler uses a book in which sizes in inches and half inches are marked from five inches to twenty. With the scaler are two assistant scalers and they measure the logs with a caliper one foot from the top end. They also have a chain between them, as the logs are certain odd feet in length, from thirteen to twenty-nine feet. These assistant scalers call out the length and size of each log and the head scaler, who does the recording, repeats the measurements aloud and then records them.

During February Anders & Erik had plenty of work keeping the road clear from snow, but got better weather towards the beginning of March. They, however, had a large contract and on the nineteenth of March were still hauling. On the twenty-first of March the road became so bad that they ceased hauling and a few thousand feet had to be left over for next year.

In logging on Government forests in Sweden the trees must be looped and everything except branches must be taken away, whether rotten or otherwise. The rotten trees are, however, also useful, as Sweden uses great quantities of charcoal in her smelters. The rotten logs are cut two feet long and driven to the sawmill, and with the slabs converted into charcoal.

Qualities Which Make Efficient Lumber Salesman

By James T. Coulson

What qualities constitute a good salesman in the lumber and wood products line? This is a question frequently asked and answered in many different ways. Some lay emphasis on one characteristic and some on another. It is not often when the matter is brought up for discussion that there is universal verdict on what constitutes the efficient, thoroughly equipped and well balanced salesman. It is assumed that he must know his stock, the grades and thicknesses that he is selling, the purposes to which the different kind of woods can be used, when delivery can be made, etc. It is a prime essential that he know his stock and it is also imperative that he should know his customer. Herein is where many errors are made.

There is many a bright representative on the road who knows all about the lumber that he is selling, where it is grown, how it is manufactured, why it is better than other kinds of wood and a lot of data that makes up an interesting line of talk and helps to arouse interest and, in many cases, close the transaction.

On the other hand, too, few salesmen really know a customer. They think they do, but are greatly mistaken in a multiplicity of instances. Now and then some unthinking, egotistical and self-centred individual will talk about "controlling" such and such acount or "directing" the purchases of Mr. So-and-So or practically doing the "buying" for Mr. Blank. In their blindness and self-deceit they imagine their influence and magnetic personality are so great that they practically hold some accounts "in the hollow of their hand." The story is told of an ambitious and aggressive eastern salesman who called upon a yard man not long since and was informed that his stock was pretty well assorted and that he—the yardman—really needed nothing at the present time. The would-be capable representative did not think that one "no" was enough for final decision and sat around the office making out a bill of goods of various thicknesses, widths, lengths and grades on two or three different lines of softwoods. After he had extended the items he presented the document to Mr. Blank, stating "Now I was out in your yard a little while before you came in and I think this is about what you require. That would make a pretty nice order and if you will sign it I will very much appreciate your kindness. I am sure you need this stuff and we are the ones to give you the service and the stock."

Knowing the Nature of a Customer

Needless to relate Mr. Blank promptly intimated to the unduly aggressive pedlar of pine products that he knew his own mind and that his room in the office would be more welcome than his presence, and the salesman beat a hasty retreat.

Of course, salesmanship largely resolves itself into knowing human nature and this particular man did not know his customer, and he thought stampeding, suggestion and forcing the issue would win out in this case, but the mark was missed by a long distance. All this might have scored with another dealer. Different methods and various tactics have to be adopted in order to carry and what will put the thing across or get by with one man in one town will perhaps utterly fail with the wood merchant in the next municipality.

There is a lumber merchant in Hamilton who has a little black book which he hauls out when a lumber salesman calls and this miniature reference work constitutes a perpetual inventory. The yardman carefully consults it, goes through the various lines and tells the caller of a firm with whom he does business just what he can use and what he cannot use. If he should close the book and say "No thank you, I do not think there is anything I want to-day," there is no use in remaining longer or seeking to induce him to change his mind. Most of the men who call upon this particular gentleman realize that he possesses decisiveness, and that his judgment is final and no artifice, pretext or plan can induce him to change his mind when once it is made up.

It is not advisable to push a customer too hard when once you have secured his order. It is certainly a great mistake to load him up. Speaking the other day of his experience, an old lumber traveller stated that he visited a certain town in Western Ontario where a man was starting in the retail lumber trade. "I sold him a few carloads of stuff," he said, "and told Mr. G—, who was quite inexperienced, that he would have to learn the needs of his customers and his locality by actual contact; that there would be other lines which he would need later on, but that I would leave him to find them out for himself—in the meantime he could get along on the order that he had placed with me.

Loaded Him Down With Stock

"About two weeks later a representative from another manufacturing concern happened along and, seeing that Mr. G— was somewhat green at the game, told him that he should have so-and-so and so-and-so, and loaded him up with a lot of odd sizes, thicknesses and grades that he did not dispose of in years. This was in 1913 and when I called on him the other day there was still some of that material in the yard. Traveller No. 2 never since secured any business from Mr. G—. This salesman made the mistake of going at the customer like a Metropolitan barber does after a casual patron.

"The tonsorial artist wants to give the man in the chair everything from an electric massage to a Turkish bath, going on the principle that now we have him we might as well squeeze him for all that is possible to get out of him, for he may never pass this way again.

"Such an attitude in the lumber business is entirely a mistake. A traveller should keep his promise, be fair, open and frank with his customer and also his firm, and not hold back any facts that he should make known and which the purchaser will find out afterwards. It does not pay to "take a chance," as the aftermath is often not only unpleasant, but unprofitable. And I believe in being cheerful. There is no good going around looking as if the bottom had dropped out of creation and that the sun had gone out of its orbit. Business may be slow, payments rank, trade dead as a cemetery, and the outlook as black as Erebeus, but keep these things to yourself. I do not mean to lie deliberately or misrepresent things, but a cheerful countenance and a happy way of presenting matters carries more inspiration and fosters a better feeling than gloom and despair. Even if the worst is at the worst, one could say when asked how business is: "Oh it has not been very active, but we feel sure it will soon revive," or "things are brighter and I hear a great many in the trade looking hopefully to the future."

Do Not Give Way to Pessimism

If you cannot speak glowingly of the present talk of the improved condition that we all believe is coming in the lumber arena in the not far distant future, by reason of demand and an active building campaign.

Be like the minister who was called upon to give a certificate of character to a shrewd politician. The latter happened to be a wealthy member of his congregation and had contributed liberally to the work of his church. The parson did not like to turn down his political friend who had in years gone by been in a number of shady transactions, and bore a somewhat unenviable reputation with his party. He penned a note that "the bearer, Mr. Blank, is a gentleman whom I have known for many years. He has a spotless future."

So if business is quiet and off color we can speak of its future as bright and promising and full of hope, and this is no day dream or perfunctory performance. It is real, vital and earnest common sense.

The Relation of Railways to Forest Fires

Their Responsibility in Protecting Wooded Areas Through Which They Run—How Dangers May be Minimized by Using Oil Burning or Electric Locomotives

By G. C. Piche, Chief Forest Service of Quebec

G. C. Piche, Quebec

The railways have in the past been strongly accused of being responsible for a good deal of the damage caused by fires in the forest regions through which they run. We are in position to state that they are still responsible for many of the fires occurring in the Province of Quebec.

The causes of these railway fires are:

In the course of railway construction, during the clearing of the right of way or by their engines and steam-shovels.

Hot ashes scattered on the right of way.

Sparks and hot coals blown from the chimney.

Fires caused by railroad employees, whilst burning tier, grass or brush.

Smokers on the trains.

Fires by strangers walking or camping on the right of way.

According to the reports published by the Department of Interior, the origin of the forest fires caused by railways in the different provinces are:

British Columbia, 10 to 20%.
Ontario, 50 to 67%.
Prairie Province, 10 to 24%.
Quebec, 12 to 30%.
Nova Scotia, 19 to 22%.
New Brunswick, 11%.

Generally the greater proportion of these accidents occurred during the construction of the line because many employees paid but little or no attention to the observation of the elementary rules to prevent forest conflagrations. Moreover, the steam engines and the steam shovels used during the construction are generally of a poor type when they are not of second-hand nature. It stands to reason they are often deprived of an apparatus to prevent the escape of sparks. Therefore, it was an exception when the forest was not burned severely during the construction or the extension of the railway.

While the contractors were building the Gouin dam on the St. Maurice, they were obliged to use oil-burning locomotives to bring up their material. During the three years they were busy at this work, there was not a single fire, whereas during the construction of the Transcontinental Railway, notwithstanding the precautions taken, and every year since it has been in operation, numerous fires have occurred to the extent that on each side of the right of way from La Reine to Parent, there is a zone of one to many miles wide in which the forest has been scorched.

During the first years of operation of new lines, the administration generally uses rubbish material such as broken winded engines, and the personnel is not yet trained enough to meet the emergencies, with the result that there often happens accidents, such as we deplore. Along the Quebec and Lake St. John Railway, fire has repeated every year its damages, until recently, when the necessary precautions were finally taken. It is the same when going from North Bay to Fort William, where one can only regret the immense losses caused by the railways through this section of Ontario which was rich in pine and other trees of good quality.

It, therefore, stands to reason, that during the period of construction, special care should be taken to prevent any fire if possible.

Methods of Operation Improved.

We must say that if this state of affairs was true in the past, the railway authorities have somewhat amended matters and we must admit that, in general, they have greatly improved their methods of operation, but there are yet reforms to be accomplished and improvements to be made, and it is my purpose to discuss them briefly.

Actually the railways are placed under the control of the Board of Railway Commissioners if they operate in different provinces, such as the C. P. R. and the Grand Trunk Railway; or they depend on the Public Utilities Commission if their operations are limited to the boundaries of our province, such as the Canada and Gulf Terminal Railway, and the Roberval and Saguenay Railway. All these railways are carrying out as well as they can the regulations enacted by these two public bodies.

There exist, however, a few railways that still escape this control, and it is the most absurd thing to find that it is the railways belonging to the nation which are acting independently of the Board of Railway Commissioners, which has been created by the Dominion Parliament to control all lines in Canada. We hope that the obstacles created by certain persons to check the passing of the National railways under the control of the Board of Railway Commissioners, will soon disappear, as this anomaly prevents unity of action in our work.

The Regulations Now in Force.

The regulations adopted by the Board of Railway Commissioners and by the Public Utilities Commission aim principally to prevent fire disasters, and to compel the railways to give this matter their full attention. The law even provides that they are held responsible for all accidents of this nature, which occur within a zone of 300 feet on either side of their line.

Among the main measures of prevention that have been adopted, we must point out the following:

The subdivision of each province into districts directed by a special officer who is appointed by the Board of Railway Commissioners, as well as the Provincial Fire Inspector. In each district there are established a certain number of patrols made by special employees, travelling on speeders operated by gasoline. Where the control does not require to be as effective, the sectionmen are cautioned to be on the lookout for fires and extinguish them promptly.

All the engines travelling in forest sections must carry special apparatus to prevent the escape of sparks, live coals and hot cinders.

The locomotives must be inspected during the dangerous season once a month by special experts.

Each district is inspected periodically by special officers of the board, who also investigate every fire that is reported.

These measures have already given excellent results. It will be necessary to complete the classification of the different parts of each railway system, into forested and non-forested sections, according to the presence or absence of adjoining forests, so that we may give all the necessary attention to the dangerous zones and exercise there a better care on the right of way and the adjoining properties.

The Use of Electric Locomotives.

Among the necessary measures suggested, to better the situation, there is none more important than to force the railways to burn oil instead of coal, or to employ electricity to operate their locomotives, as it is recognized, in spite of all the improvements made in coal-burning locomotives, they have been found to be unsufficient to prevent disasters. We feel that the report of the Committee of Forest Fire Legislation, (which was distributed at the Ottawa Forestry Convention), is correct when it states that the use of oil-burning engines may, in the end, prove as cheap or cheaper than the use of coal-burning locomotives. It is a known fact the C. P. R. is using oil-burning locomotives to handle their trains in two of the mountain districts of British Columbia; though coal is cheap in that region. In California, as well as in the Adirondacks the use of oil-burning locomotives has reduced largely the number of fires.

Benefiting by the lessons of the Great War and desirous to save fuel, which is now so scarce in Europe, the electrification of the railroads of France has become a necessity. From the studies made by a special committee appointed by the French Government, a program has been made for the immediate electrification of some 8,400 kilometers of line, thus distributed: On the Paris-Orleans Ry. 3,100 kilometers out of 7,787; on the Paris-Lyon-Mediterranean Ry. 2,200 kilometers out of 9,720; on the Midi Ry. 3,100 out of 4,062. This last railroad company, had, even before the war, started to electrify part of its system; in particular, on the section near the Pyrenean mountains, they have already three electrical stations producing 63,000 h.p.; before two more years they will dispose of, at least, of 100,000 h.p.

The projects adopted recently for the development of the Rhone, Dordogne, Isere, and Durance Rivers, which flow from the Alps and Jura mountains, mean the enormous electrical development of over one million kilowatts. It is estimated that the saving of coal that will thus be realized, by the electrification of the French railways, will represent more than two million tons, which will reduce the importation of France by at least 150 millions francs a year.

Necessity of Safeguarding Forests.

We have several reasons to copy this example which would ensure us not only a saving in our coal bill but would also safeguard our forests. Last summer two fires occurred along the Transcontinental Railway, one at Vandry and the other at Timbrell, causing the destruction of over 50 square miles of forests; some 150,000 cords of pulpwood, which, if converted into paper in this province, would have yielded a product worth about $10,000,000.

Do you not think that, with part of this amount, much could have been done to develop some of our water falls, to generate electricity, to build transmission lines, and to buy electric locomotives; in a word, to organize the electrical traction in that region, whereas if nothing is done the same disaster may happen to-morrow and produce as much damage if not more.

During the late war we learned many lessons, and one especially —to face the future in a different manner than we used to in tthe past. Not long ago, when the Federal Government undertook the construction of the Transcontinental, bitter criticism were uttered by many, on account of the big debt which the country was called to support, and it meant only an expenditure of $300,000,000. Since then we have spent billions of dollars abroad, without feeling the worst for it.

Before the war the C. P. R. authorities were seriously considering the question to operate by electricity their line between Montral and Quebec. Besides the diminution of the danger of fire, passengrs would not be exposed to receiving in their eyes and over their clothes, the dust and the soot escaping from the locomotive. The electrical railway would be the real dustless railroad and in that respect would be well patronized by the travellers.

I believe that we should insist in having a change in the fuel employed, or, as I prefer it, use electricity exclusively for the traction of cars in forest regions. We have no oil deposits but we have enormous water powers still idle.

Other Measures to Be Adopted.

There are other minor measures, which should be adopted, such as the screening of the smoking cars or compartments and the placing of barrels of water on trestles and in sections where the grade is steep. We should not forget the use of signs in the cars, and even on the engines, to call the attention of travellers and of railroad employees, to the precautions to be taken at all times.

We should not fail to discuss this question in a broad manner. From what I know of the railway authorities, I believe, that they will co-operate. Being interested in every national movement, they will naturally aim to improve their methods, so as to increase the safeguarding of our forests, and they will take the means to employ electricity wherever possible, in order to reduce the amount of our imports and develop our great resources.

What Will By-Products of Sawmill be Worth?

Less of the Tree will Soon be Left in the Woods to Rot and Less will be Discarded as Valueless at the Mill—The Pioneer Work of the Chemist

By James D. Lacey

No other industry furnishes the would-be reformer such material for his favorite pastime of "viewing with alarm" as he readily finds by a superficial survey of the lumbering activities of the United States. The bald statement that but forty per cent. of the industry's raw material is utilized is sufficient—to the uninitiated—to prove gross inefficiency and wilful waste. But the truth, when one really gets at it, is not nearly so bad as some frequently quoted generalizations would seem to indicate.

It is a business axiom that the reclamation of any waste product is practicable only when it is profitable. No business enterprise can afford to engage in conservation measures purely out of sentiment. The mountains of the West are full of minerals that would be tremendously valuable if it were possible to get them out and convert them to use without spending more in the operation than the value of the product. Every industry is compelled to "waste" those things which will not pay for their own conversion into useful commodities and in the lumber industry of the past the percentage of such waste has run very high.

This situation, however, is changing rapidly. Chemical science has made important strides in the development of processes for the utilization of waste products of the forest; and it happens that chemistry affords the chief key to the utilization problem in this industry. Then, too, the upward trend of timber values in itself has tended to stimulate interest in every seeming opportunity for more complete utilization. When the timber supply seemed inexhaustible, the attitude of those who owned timber was much like the attitude of the American farmer in the days when farm land was so cheap that it seemed more profitable to work the land out and move than to maintain its producing capacity by fertilization and rotation of crops. To-day timber has a value that serves as an incentive to the development of processes for its complete conversion into merchantable products, and this incentive is bound to increase with the unfailing advance in stumpage values.

A visit to the sawmills of any section to-day will show that very few are wasting the short lengths and other odds and ends that every mill sent to the refuse burner a few years ago. As the standard grades of lumber have increased in value, these items have become saleable, and are adding to the profit of the business. But this is merely a first step in utilization. Other steps. of far greater importance, are being taken by lumber manufacturers in all parts of the United States, by way of installations of plants for the production of chemical by-products, paper pulp, etc.

It is not altogether improbable that the time may come when the by-product distillates of wood will rank in value with the product of the co-ordinate sawmill operation. No one knows just when the production of petroleum may begin to fall below the tremendous and constantly increasing demand for oil. Whenever a serious shortage sends oil prices above a certain point, however, ethyl (grain) alcohol distilled from wood will afford an efficient substitute for many purposes, for which oil products are now used, including the operation of internal combustion engines for the automobile and other automotive machinery. Grain alcohol may be produced from any wood at relatively low cost, and by a process which yields other products of value as well. Wood alcohol, produced by destructive distillation, is one of the pioneer by-products, but one for which the demand is increasing rapidly, but for direct use and to serve as a denaturing agent for grain alcohol distilled for industrial use.

Relatively few of the important chemical by-products can be produced from any one wood. Tanning extracts, for example, are obtained chiefly from the bark of oak and hemlock. Turpentine is reclaimed from those woods possessing the necessary resinous content. Pine oils, as the name implies, are produced from the pines. But chemical scrutiny demonstrates that practically every wood possesses important by-product possibilities that may be greatly magnified as experts explore further the field of organic chemistry.

During the war the range of by-products was greatly increased. In Germany, fabrics of many varieties were developed and manufactured from wood. Wood fabric rugs and carpets of serviceable character were produced. Bags and sacks, fibre silks, imitation leather and many other articles of utility found market as substitutes for materials that were no longer obtainable. In the United States, too, recent years have seen remarkable development in the use of wood in manufacture of wall-board, an industry of great and growing size, and in the production of linoleums, heat-insulating materials, etc., thus creating important industries that are totally dependent on our forests for their primary raw material.

Progress is dependent upon the chemists's pioneer work, plus commercial development and exploitation that create demand and find markets. Until these things began to be done, the lumber manufacturer necessarily limited his utilization to the conversion of his raw material into lumber and other primary products which he could make and sell with profit.

Much of this chemical pioneering has been done, but far more is coming and as it comes it will steadily cut down the percentage of waste. Less of the tree will be left in the woods to rot. Less will be discarded as valueless at the mill. And a constantly increasing volume of other products than lumber will develop out of the saw mill industry, with resulting increase in the profits of saw mill operation and proportionate enhancement of the value of timber.

It is not unreasonable to suppose that eventually the value of

chemical by-products may very nearly equal the value of the direct products of the saw mill. In fact is has been estimated by competent engineers in connection with careful surveys of operating properties that in some instances the by-products possibilities of lumber enterprises now carrying on exceed in potential profit what the same operations are earning on their lumber.

These facts should be kept in mind in connection with the consideration of the merits of any timber property for which operating plans are in contemplation. They have a direct bearing on future timber values and on the present earning possibilities underlying timber investments.

How Scotch Solve Pulp Shortage

The paper problem still causes much discussion amongst proprietors and publishers in London, Eng. As a means of immediate relief, several paper mills in the Lothians are receiving from America and Spain enormous quantities of esparto grass. This eases the paper shortage in Scotland.

Much discussion is aroused by experiments at Manchester College of Technology with peat, of which large quantities exist in Ireland and parts of Scotland and England. Peat is proved to be an excellent substitute for wood pulp in the production of newsprint, wallpapers, paper board and a host of other things. It is urged in view of the great shortage the invention would be valuable even if it were permitted to manufacture nothing but brown paper, while excellent newsprint could be obtained by mixing 50 per cent. peat pulp with an equal quantity of wood pulp. The process is so simple that large quantities could be produced without any moving of machinery. Moreover, a trade in brushes could be developed from tough roots extracted from peat. One London firm already has offered $60 a ton for the liquid extracted from peat. A quarter of a million sterling would be required for its development. It is hoped this will be forthcoming without calling in the aid of foreigners.

The agent-general of Quebec issues a public denial of the statement published that timber for making paper is running short in Quebec Province, which alone has between 70,000 and 80,000 square miles of timber limits or forests, which means 61,000,000 acres of forest land, or anything between 450,000,000 and 500,000,000 cords of pulpwood. Therefore, Quebec has enough pulpwood to last all paper mills now existing in Canada for the next hundred years.

Economy in Use of Paper

The Nation's Business, a magazine published by the chamber of commerce of the United States, in discussing the paper situation, cries out loudly against extravagance, and urges that the United States government set the pace for the people of the Union along the lines of economy in the use of paper. In this connection, the magazine cites the case of a Hellena, Montana, editor who received identical publications from the same department of the government under three separate addresses. The Nation's Business also denounces the practice of using the government printing office for the issue of propaganda for the members of the senate and other departments of the government, quoting one senator to the effect that a Kansas business man of his acquaintance in three days received 165 government publications, and calling for a saving of paper by the United States federal authorities.

This waste of white paper is not peculiar to the United States. The franking privileges allowed the members of parliament and senators in Canada, and the accessibility to them of the government printing office, permits them to flood the Canadian mails with printed copies of their own or other politicians' speeches, a majority of the addresses receiving a number of copies of the same publication. This is surely a great waste of white paper, of which there is so serious a shortage at the present time.

Here is a matter in the interests of economy which should engage the attention of the federal government. Waste in paper as well as in other lines should be checked. A strong hand is needed to effect this reform.

The General Outlook in East is Good

Very little can be said by the lumbermen at St. John at the present time, that is, in any way pessimistic. The mills are all running and turning out lumber in only moderate quantities. As labor, having been advanced in wages during the past spring, is more independent than ever, and men only work in a slow, careless manner, so even there may be a slackened demand at the moment. There will be no excessive production of sawn lumber and if building propaganda starts both on this continent and in Great Britain there will not be enough lumber to go around and demand will again become active and present prices will be maintained. Some stocks of deals were moved across the water by W. M. MacKay, Ltd. A certain quantity was loaded in cars but, of course, cars are still scarce for American points. Certain embargoes west of Boston are still in effect, but every little movement helps, and if the northern New York pulp mills keep buying lumber to turn into pulp a considerable amount of sawn lumber will be diverted from the building trades to the pulp mills and, in this way, used up. These mills are paying around $45.00 per M. for stocks, f.o.b. cars Quebec, for rough 3 by 4 to 3 by 7 and squares.

Very few sales to Great Britain or to U. S. can be reported at the moment, as both markets are not active. A certain pressure by the bankers to cripple business has been put into effect during the last few weeks. This pressure should certainly not be applied against the lumber trade as standing timber is becoming scarcer each year and more valuable. The pulp mills to-day are buying all the standing stumpage they can locate at large prices and steadily advancing their offers for wood.

The condition of business throughout the country districts is good, the farmers doing a great deal of repairing. New schools are being built and the wood factories are busy at St. John turning out house joinery. Prices for this work are as firm as ever and deliveries slow on account of men becoming very slow at the machines and benches. Flooring, spruce, B. C. fir and hardwoods remain firm. Glass is also advancing, so that sash is in no way in a weak position.

A fair amount of repair work is going on at St. John and vicinity. Good labor is not easy to find and there is no weakening in wages. Shingles locally are firm with no reduction in price. Laths are weaker, but $8.00 is still being paid f.o.b. cars St. John.

More Light on New Sales Tax

Geo. W. Taylor, assistant deputy minister of Inland Revenue, Ottawa, in writing the "Canada Lumberman" on some special phases of the one per cent. sales tax, says:

You are informed that a wholesaler may include in his invoice to his customer the amount of sales tax paid by him at the time of purchase of goods from the manufacturer provided that the sales tax is not included in such wholesaler's cost upon which profit is calculated.

The sale from the manufacturer to the wholesaler is subject to the payment of the sales tax as is each subsequent sale of such article when sold by the wholesaler and jobber, or other person who sells for purpose of resale.

Goods sold at a delivered price, freight included and added, are subject to the payment of the sales tax on the basis f.o.b. mill price.

Lumber still in the manufacturer's hands but which has been invoiced by the manufacturer prior to May 19th and wholly paid for by the wholesaler prior to May 19th, but is subject to the sales tax when sold by the wholesaler to his customer.

Sales made by manufacturers are subject to the 1 per cent. tax when made to a wholesaler or jobber but are subject to a tax of 2 per cent. when made direct to a retailer or consumer.

Slabs and cord wood for fuel purposes are exempt from the sales tax.

Good Results From Industries Exhibition

The following reference to the Canadian Industries Exhibition held in London, in June, is contained in a recent issue of The Canadian Gazette:

Whatever may be said of the lack of proper advertising, the Canadian National Exhibition, which closed recently, has not been without good results. The public has seen something of Canada's industrial ability, and buyers have not been lacking. At several stands at which our representative made inquiries he was told of good business being done. "More than satisfied," said one. "Have sold seventy-five pianos," said another. There were other exhibitors not so satisfied, but for the most part they were dealers in goods for which they had already secured a goodly list of customers, and these people had no need to respond to the invitation to visit this or that stand to see goods of which they were already buyers. While we agree that an advertising campaign might have helped to bring people to the exhibition, we are glad to think that it has been much more successful than it appeared to be during the first few days.

Lumbermen Consider Freight Charges

A meeting of the Montreal Lumber Association was held in the Board of Trade on August 4th to consider the question of the proposed increase in the freight rates. Mr. G. W. Grier presided. It was decided to appoint Mr. Tilston, the manager of the Transportation Bureau, to attend a meeting of the Canadian Lumbermen's Association, the Montreal Lumber Association, the Canadian Pulp and Paper Association, Manufacturers' Association, and the Montreal and Toronto Boards of Trade, at Ottawa.

Utility of Motor Truck in Logging Operations

How Leading London Firm Loads and Transports Heavy Timber to Its Plant with Ease, Economy and Expedition—Solving the Hauling Problem

By W. L. Edmonds

THE economic transportation of saw logs from point not immediately in contact with either railway or water route to mills and factories in certain parts of Canada is a problem to the solution of which a good many manufacturers have been gving considerable thought and attention.

Among the firms who have given much thought to the solution of the problem are the Beck Manufacturing Company, manufacturers of cigar and tobacco boxes, London, Ontario. This company cut their own lumber at the plant in London from logs obtained in the surrounding country. Naturally, however, in a district so largely settled, the firm has found the radius from which they could obtain logs of the proper quality gradually expanding. Where timber lots were adjacent to railways the fact that the radius was extending did not matter so much, but even then, unlike in the old days, it has been found increasingly difficult, and particularly in the summer time, to induce farmers, largely because of the scarcity of hired help, to draw the logs to a railway shipping point. Within a radius of a few miles from its factory it was possible for the company to utilize teams; beyond that it was practically impossible from an economic standpoint.

Showing how second tier of logs is drawn on to the truck. Three logs are taken up at one time

The Beck Manufacturing Company are, however, now no longer obsessed with the problem of getting an adequate supply of logs to factory—they have solved it. Two months ago, after making an investigation extending as far as points in the United States, the Company purchased from the Packard-Ontario Motor Company, of Toronto a four-ton Packard truck equipped with a new loader attachment, also a trailer. The equipment has since been in continuous operation and the results, as the writer learned from a personal investigation, are entirely satisfactory. "The equipment," remarked a member of the firm, "has been a great convenience to us; it has enabled us to get timber from distances we could not otherwise have reached and to do it with ease, economy and expedition. In other words, it has done what from previous investigations, we expected it would do."

One Man Loads Truck and Trailer

With the trailer attached the truck has during the past two months conveyed on an average about 2200 feet of the scaled hardwood logs per load to the factory in London. The number of truck trips per day have, of course, varied according to the radius covered. Recently, and at the time the writer was investigating the truck, with trailer, was hauling logs from Kippen, a point 43 miles distant from London, or a total of 86 miles for the round trip, the load some days exceeding the average of 2200 feet of scaled logs. The round trip is made in from eight to ten hours, including time taken in loading and the usual mid-day dinner hour. On one occasion two trips were made in the course of a day, but the striking and interesting feature in regard to the undertaking is that only one man is employed in the whole operation, that one man both driving the truck and loading it and the trailer.

The fact that but one man does both the driving and the loading is, of course, only made possible by the loading attachment with which the truck is equipped.

A brief explanation of the loader shows how it is possible for one man to load big hardwood on to both truck and trailer. The Loader (which is obvious from what one man can accomplish in operating it) is simple in its construction, being driven from the propeller shaft which drives a winding drum mounted on either side and underneath the bolsters of the truck through a phosphor-bronze worm gear, equipped with end thrust ball bearings, which reduces the loss of power to a minimum. Attached to the winding drum is a log chain, which is in turn hooked to the centre of another chain that is passed under the log at either end and attached to the truck. This done, two skids are placed at the side of the truck and then the man steps on either footboard, touches a foot pedal, which

The Packard truck fully loaded with logs and ready for the long trip to the mill

in turn starts the winding drum, and in a few minutes the log is resting on the truck in the desired position. When the requisite number of logs are loaded upon the truck the trailer is brought into position parallel to the truck and on the side at which is located the winding drum; then the hauling chain is thrown across the trailer to the opposite side and he same process of loading is employed as with the truck.

Loads Three Logs at One Time

By the aid of this loading device it is possible to handle more than one log at one operation. The Beck Company usually load three at a time and particularly logs up to sixteen inches in diameter.

The Company has not yet taken its truck into the bush but to do so is, of course, a potential possibility governed largely by the character of the roads and the season of the year. One thing, however, is certain—by the loader attachment the utility of the truck in connection with lumbering operations has been enormously increased, no only for the actual process of loading, but by the aid of the winding drum and its chain, for the skidding of logs, from low-lying or swampy ground to where they can be loaded on the truck itself. Aside, however, from the utility of the loader, the Packard truck is made doubly efficient in this respect because of the underslung winch which can be installed at the rear of the chassis.

The writer learned that the Beck Company is not only satisfied with the tonnage hauled by the truck and its trailer, but with the speed as well with which it covers its respective routes when hauling logs.

But the importance of the loader equipment is not so much what it has accomplished for the Beck Company; its main importance lies in the fact that it opens up a potential possibiliy of manufacturers and dealers being able to gain access to the many small lots of hardwood timber scattered throughout the province of Ontario which were practically beyond their economic reach because of the transportation difficulties which stood in the way.

The work done by this loading device has been so satisfactory that the Packard Company has decided to demonstrate it at the Canadian National Exhibition.

Hardwood Association Appoints New Men

The membership of the National Hardwood Lumber Association, whose headquarters are at Chicago, has grown very rapidly of late, and now numbers over 1,300. The Association has been in existence over twenty-three years. The constantly growing demand for National inspection has necessitated enlargement of the staff in both Canada and the United States.

Wm. Francis Jones has been appointed assistant to Chief Inspector Arthur G. Bowler, Montreal, and has entered upon his new duties. Horace F. Taylor, who is President of the N. H. L. A., of which George C. Goodfellow of Montreal, is a director, has named the new Inspection Rules committee and chosen Kersley, of Montreal, as a member. Two Toronto firms have recently joined the National Hardwood Lumber Association in the persons of the Leigh Lumber Co. and the MacDonald Lumber Co. The Association has shown its appreciation of the work of all its inspectors by giving them a two-weeks' vacation this year. John E. Banks is the chief inspector of the Association in Toronto.

Mystery of the Mayflower's Timber

The mystery of the discovery of the timber of the Mayflower is not yet completely solved, but Dr. R. F. Harris produces evidence which will certainly "make" the lovely house known as Old Jordan's Hostel at Seagreen in Buckinghamshire, Eng., a place of pilgrimage for Americans. For two years Dr. Harris has been engaged in searching for traces of the fate of the ship which took the Pilgrim Fathers from England 300 years ago.

Someone made a chance remark on the Mayflower timber in the hostel barn. Dr. Harris tried to investigate what appeared to be a local tradition and he told his story to an enthusiastic little company of English and American Pilgrims.

Experts who examined the wood in the barn at Jordan declare it to be ship's timber put up by shipwrights. The letters H. A. R. are found on one of the beams. Papers in the record office give the Mayflower port as Yarwich. Some of the beams are decorated with emblems which may be intended for Mayflowers. Old Jordan's is certainly not later than 1625 and the "bricks" used after that date were ship timbers at a period when there was a famine in home-grown oak.

Most of those who heard Dr. Harris felt that a little more evidence was needed to prove the truth of the local tradition. Meanwhile investigations will be continued.

Spending a little money to get more money is a phase of better business which appeals to the multitude and is practiced by the few.

Canada Gets Next Big Forestry Meet

How closely the forests of Canada are related to the prosperity and security of the British Empire was clearly emphasized at the Imperial Forestry Conference just concluded in London, Eng., according to Robson Black of Ottawa, secretary of the Canadian Forestry Association, who represented the Dominion. One of the chief conclusions of the conference was that the Empire's forest resources, and the business of Canada in particular, were very inadequately constructed. An inventory of the forest resources was agreed upon.

The next Imperial Forestry Conference is also to be held in Canada in 1923, an event which will bring to this country distinguished representatives from all parts of the Empire.

"The British Government has adopted an admirable policy of forest planning," said Mr. Black, "but the main timber harvest cannot be gathered for half a century. Meanwhile the United Kingdom, as the great consuming centre of forest products in the Empire, is forced to import from non-British countries alone 75,000,000 pounds sterling worth of timber per annum. Obviously, the United Kingdom has a maximum interest in what Canada is doing along the lines of conservation of forests. This Dominion holds the only great stands of conferous timber along the All-red Route, and an intense and growing concern in the forestry policies of our Dominion and Provincial Governments is everywhere apparent among British public-men."

Newsprint Production Shows Steady Gain

Total newsprint production of 90 leading mills of the United States for the first six months of 1920 was 759,624 tons, according to a report of the Federal Trade Commission, made public to-day. During a similar period last year 74 mills produced 671,141 tons, the report said. Of this year's production 697,290 tons was standard newsprint.

Stocks of standard print on hand at the mills June 30 amounted to 20,976 tons, as compaed with 20,023 tons last year. Mill stocks of standard newsprint increased during June, although 11 machines in eight mills were idle a total of over 1,400 hours during the month, due to lack of labor, breakdowns, lack of coal and pulp shortage.

The average price of contract deliveries from domestic mills to publishers in carload lots for standard newsprint during the month of June was $4,752 per 100 pounds, based on deliveries of approximately 51,000 tons on contracts involving a total of about 500,000 tons of undelivered production.

The average market price for June in carload lots was approximately $10,072 per 100 pounds, the report said. The contract price of Canadian standard newsprint was placed at $4.55 per 100 pounds.

Western Company Will Enlarge Operations

An issue of 7 per cent. first mortgage serial gold bonds of the Western Canada Pulp & Paper Company, Ltd., will shortly be offered. The company putting out the bond issue is engaged in the manufacture of sulphate and kraft pulp, and it is their intention to extend operations to the manufacture of lumber, shingles and wood products of all kinds. The plant is located at Howe Sound, about 25 miles from Vancouver. The company owns its own townsite, and has acquired water power rights of Rainy River. The directors of the company include such well-known business men as: Everly M. Davis, H. J. Daly, A. H. Douglas, Lieut.-Col. Clarence Smith and Henning Helin.

New Lumber Cutting Policy in Quebec

Speaking at the conference of Foresters at Grand Mere, P.Q., Mr. G. C. Piche, chief forester of the Quebec Lands and Forests Department, referred to the policy of the Government in relation to lands and forests. "The new Premier is anxious for the maximum amount of fire protection," said Mr. Piche, "and is particularly in favor of the use of aeroplanes which the Laurent de Company has developed so successfully. In regard to cutting in the woods, a new programme will probably go into effect shortly, which, in addition to regulating the size of the various kinds of woods that may be legally cut, will also regulate the maximum and minimum yearly cuts on areas controlled by the province. It is our belief such regulation will eliminate speculation by unscrupulous concerns who hold timber lands on lease.

"The new premier believes," Mr. Piche continued, "that the time has come to arrange with limit-holders a definite policy in regard to the forests in this province. Mr. Taschereau will shortly make an announcement of his ideas in this respect, as he is of the opinion that reforestation methods are essential if Quebec is to retain its forest wealth. This winter, one of four young men will be sent abroad by the Government to study forest methods in Europe, and three others will be sent over later to spend a year in this work. Upon their return it is planned to let them give the Government and concerns using the forests the benefit of this study."

The International Pulp and Sulphite Workers is scheduled to open in the Russell Hotel, Ottawa, early in October.

Nova Scotia Lumber Quality Better Than Ever

Rufus E. Dickie Reviews Operations of Past Season and Looks for Good Business Conditions to Prevail Next Spring -- Output May be Curtailed

Rufus E. Dickie, Stewiacke, N. S.

ONE of the progressive young lumbermen of the Bluenose province is Rufus E. Dickie, of Stewacke, N. S. At the last annual convention of the Canadian Lumbermen's Association, held in Quebec City, he was elected one of the new directors and took an active part in the proceedings. Mr. Dickie operates a large mill on the Stewiacke River on the C. N. Railway, and has a dressing mill and electric light plant at the station, while last winter he had several portable mills cutting in the woods. He reports that the midsummer seems to have slowed down all the selling markets to a certain extent, and this condition, coupled with the rather uncertain outlook for next winter, is causing some large operators in Nova Scotia to consider seriously a curtailment of production for the next year or possibly two years.

Speaking recently to the "Canada Lumberman," Mr. Dickie said: "Last spring we did not have the usual quantity of rains and water for driving, and consequently the total winter cut for the province did not get to the mills. On account of the late spring and summer being especially dry, these logs have not yet come in, and other operators, who got their logs to the storage boom in the spring, are not now able to replenish their supply at the mills, from the storage ground, and are closing down. We usually have good rains in August, so am hoping that the shutdown will not last long.

"The quality of the Nova Scotia manufacture this year is much better than previous, and we hope soon to compete favorably with the other provinces. There have been plenty of men during the season, and they have been giving better results. Labor, in the lumbering line, seems to be more settled, and men are becoming more willing to work. Previous to this year, it was hardly possible to correct a man when at fault. This year, as a rule, they will stand any amount of reasonable criticism."

Mr. Dickie reports that the harvest excursions always interfere with milling operations in his district and these western trips are not favorably looked upon by the employers, as there is always considerable trouble afterwards to fill up the vacancies created by those who leave. The lumber manufacturers of Nova Scotia feel that there is sufficient help west of Montreal to take care of the harvest operations if properly gone after without interfering with the Maritime provinces who are only just beginning to have men enough to carry on necessary work.

In regard to shipments and the car situation, Mr. Dickie says that although the American market has weakened considerably, yet there seems to be an increase in cars available for that market, and consequently, shippers with old contracts, are loading every available

The dressing and resawing mill of Rufus E. Dickie, Stewiacke, N. S. Housed in the building is the generating plant of the Stewiacke Electric Light & Power Co. which lights Stewiacke, Shubenacadie, and Milford

car, and sending the same forward. Cars appear to be more plentiful than they have been. For Upper Canada and local points it is possible to get what cars are needed, but it is almost necessary to steal them, as the railways have instructions to take every empty to the coal mines, to load up with coal for the West.

"Although present conditions are not bright, yet I am optimistic," continued the speaker, "and hopeful for the future. I expect to see good business conditions prevailing this coming winter and spring. I believe that this is the feeling of all lumber manufacturers in this district. Notwithstanding this, however, we are determined to cut down our output, for future, rather than present reasons."

His stationary mill i at Dickie's Siding, about a mile and

One of the portable sawmills of Rufus E. Dickie, Stewiacke, N. S., which sawed two and a half million feet of spruce and white pine last season. On the right are seen several fine specimens of logs

The largest mill belonging to Rufus E. Dickie, situated at junction of Stewiacke river and the C. N. railway at Dickie's Siding, N. S. On the extreme left is seen one end of the boarding house and to the immediate left of the mill are the blacksmith shop, machine and carpenter shop

a half on the Truro side of Stewiacke. The equipment consists of two rotaries, right and left-hand; lath machine, band re-saw and planers. This mill runs only in the summer time. Besides this, Mr. Dickie has four portable mills, which run all winter and part of the summer. In addition, he owns a dressing plant at Stewiacke Station, the machinery consisting of two four-sided planers and matchers, one 6 in. band re-saw, an inside moulder and power-feed rip-saw.

Connected with this dressing mill is the power plant of the Stewiacke Electric Light & Power Co., which provides illumination for the towns of Stewiacke, Shubenacadie and Milford. Mr. Dickie is also the sole owner of the light and power plant.

In regard to standing timber, the subject of this reference says he has been able to buy sufficient each year to keep his mills going. The capacity of his stationary mill is about 75,000 ft. per day. The shipping facilities are excellent, being on the main-line of the C.N.R., and near Halifax, and as a consequence he is not troubled with any car shortage. The storage ground at this mill will hold about 7,000,000 ft. The machinery is principally Oxford foundry. The re-saw is a No. 341 Yates, while the planer and matcher is also a Yates. The planers in the dressing mill at Stewiacke Stattion are one S. A. Woods and the other McGregor-Gourlay, while the re-saw is a No. 341 Yates.

The portable mills of Mr. Dickie consist mostly of Oxford foundry equipment, using Robb Engineering Co. boilers and engines. Two mills are equipped with 85 horse-power boilers and 65 horse-power engines. The third has a 65 horse-power boiler, and 50 horse-power engine, while the fourth has a 55 horse-power boiler and a 45 horse-power engine. Three of the portables were located last winter near Stewiacke and the lumber from them comes into that station, while the fourth was operated near Enfield, Hants County.

Mr. Dickie was brought up in the lumber business by his father, Albert Dickie, and worked in different branches of the industry, becoming well acquainted with all the details. He is a graduate in Arts of Dalhousie University, and soon after leaving college was given complete charge of the Albert Dickie Lumber Company's operation at Stewiacke. This was in 1907, and the firm cut and shipped 10,000,000 feet. He stayed with this organization for two years and then started out on his own hook and has been doing business successfully ever since. He operated at Tangier, Halifax County, for a few years and six years ago came back to Stewiacke, where he has been conducting affairs ever since with gratifying results.

Romance of Wooden Shipbuilding in N. S.

Ancient industry rehabilitated during the war is now decliniug owing to excessive cost of materials, high wages, decreased freight rates and uncertain conditions abroad—Problem to what extent lumbering activities will be carried on next year is still unsettled—How the "vicious circle" is affecting conditions in the East—Survey of present situation and what may eventuate very soon

By Elihu Woodworth, Parrsboro, N. S.

WOODEN shipbuilding in Nova Scotia has passed through many vicissitudes. Beginning in a very small way only intended to meet the urgent requirements of the builders, it gradually developed into a leading industry of large commercial importance and of much benefit to the whole community. Building and sailing vessels furnished employment to a large portion of the population, and "Bluenose" ships were seen on every sea. Some shipbuilders acquired moderate fortunes; some built up a big business embracing the ownership or management of a large fleet, and appeared to be much richer than later conditions justified. Many men made a comfortable living out of the industry, with something to the good; while to others it gave partial employment of a profitable character, or else afforded them many indirect opportunities of improving their condition. Shipyards sprang up in every cove and inlet along the coast and the air was filled with the unmistakable sounds peculiar to their active operations. Shipbuilding appeared to be an indispensable part of life in Nova Scotia, and no one thought of the province without it any more than without its farms, its forests and its fisheries.

But the tramp steamer came and immediately demonstrated its superiority to sailing vessels for long voyages. Steamers had been in competition for many years, and had driven the sailing packet off the seas, while they had secured almost a monopoly of carrying perishable goods. They had an unquestionable advantage in handling freights requiring speedy transportation, but the freight had to be brought to them, while the sailing ship could go anywhere for the freight. The coming of the tramp steamer changed all that. It took away from the sailing ship the most important advantage she held in her struggle with steam. The steamer now goes wherever her sailing competitor can go, and she has the added advantage of being able to give greater despatch in the loading of cargo as well as in its transportation. Consequently, when the tramp steamer came, "not single files, but in battalions," eager to secure freight, even at reduced prices, a deadly blow was struck at wooden shipbuilding. In fact, it soon began to appear that there had already been overproduction in all sorts of vessels—wooden or otherwise—and in short that there were more ships than could find employment. The natural and inevitable results followed. Shipyards were closed all over the country and freight rates dropped so low that it was no longer profitable to send ships to sea. Shipowners disposed of their fleets at whatever they could bring, or laid them up to await better times. Many were sold to the Norwegians at ridiculously low figures, shortly to appear under Scandinavian names, in competition with the small fleet of provincial ships remaining in commission. Then ensued a period of depression. Many skilled workmen left the province in search of employment, while others turned their hands to new occupations. Conditions gradually readjusted themselves, as they have a way of doing, and although vessels were occasionally built in some places, the shipbuilding era was almost forgotten in other parts of the country.

Then came the great war and the general upheaval and overthrow of established conditions. Many merchant ships were destroyed by mines and submarines. Many others were commandeered

to carry food and munitions, and it was soon discovered that instead of a surplus of shipping there was now a decided scarcity. Freight rates rose with marvellous rapidity and continued to rise, for the demand was greater than the supply. One of the first results of the wonderful change in conditions was the revival of wooden shipbuilding. Shipyards that had been silent and lifeless for years suddenly awoke to life and activity. One of the most wonderful things in connection with a wonderful period was the rapidity with which shipbuilding was revived and developed. Many old shipyards still remained, but that is about all that can be said, for in a large majority of cases the work had to begin at the beginning.

A striking proof of the capability and adaptability of Nova Scotians may be found in the fact that the most of the men employed in the revival had never worked in a shipyard before; while of the others some had reached the limit of the Psalmist, and few of them had done much work as shipwrights in the last half-century. This would seem to be a serious handicap, but it was one that energy and determination could overcome; and the pioneers of the revival were able to turn off a limited number of staunch, well-built vessels in reasonable time and to start a boom that quickly grew to large dimensions. That boom reached its culmination last year and produced a fleet of vessels that were not only large carriers, but could sail faster than modern racing machines and were not afraid of a strong breeze.

During this period the demand for shipping was constantly increasing. Freight rates reached fabulous heights, and the men who had the courage and foresight to engage in shipbuilding, made money quickly and easily by selling their vessels at a large advance upon the cost of construction, or by running them on their own account. The cost of construction had been steadily advancing all the time, but the demand was so much greater than the supply that freights soared to a phenomenal height, and, notwithstanding vastly increased expenses, left a big margin of profit.

In the shipping business, as in all other trades, there must be a limit, and that limit seems to have been reached, although its effects may not yet be fully felt. The depreciation in sterling exchange affects to some extent the trade with Great Britain, and there is a slight reduction in prices and a perceptible slackening in the demand. On the other hand, the cost of ship stores shows no diminution and seamen's wages are higher than they ever were before. A sudden drop in the price of lumber in Europe would have a disastrous effect upon our shipping, for it would mean a decided decline in freights and probably fewer charters, while the cost of keeping vessels in commission would show no corresponding reduction.

Elihu Woodworth, Parrsboro, N. S.

It is not surprising then that even the most enterprising builders hesitate about venturing further under present conditions. There is still a good demand for coasting vessels of, say from two hundred to three hundred tons carrying capacity, but the trouble is that it costs too much to build them. With the present prices of labor and material the cost of building such vessels as are wanted would be greater than the majority of the men who want them would be able or willing to pay. Builders know that there is a demand for vessels of a certain class, but they prefer to have contracts signed before commencing to build such vessels.

Culmination Reached Last Year

The boom in wooden shipbuilding reached its culmination last year. The business has been fairly active this season in many parts of the province, but the general output will show a marked falling off. Last year at the port of Parrsboro twenty-six new vessels were registered, and two old vessels were rebuilt and entered anew upon the registry books. This year the total number registered will not reach one dozen vessels of a similar size. The disparity between the output of the two seasons may not be so great at the other ports of registry, but it will be found that there has been a decided falling off all over the province. The vessels launched this year have been of a very superior class, and will require no time allowance. Those registered at Parrsboro are all tern schooners with the exception of one fine four-master built at this port, but owned in New Brunswick. The boom is not ended, but it shows symptoms of coming to an end.

Some small vessels, such as fishing craft, will be turned off, because they will be urgently needed, and, in some other cases, the number built will be larger than it would have been otherwise, because the builders got out frames last spring and want to use them. Of course, new and unexpected conditions may arise which will give the seemingly moribund boom a new lease of life, but, according to present indications, the end cannot be very distant. In some cases the end has come already, and a general return to pre-war conditions, with regard to the building of ships, now seems to be inevitable.

The Passing of the Shipping Boom

Many causes have contributed to the passing of the shipping boom, and among them labor must be held largely responsible. The laborer is worthy of his hire and justly entitled to a fair share of all that his labor will produce. But when he requires the whole product of his labor to satisfy him a halt has to be called by those who have the responsibility of making a market for the product. The price of labor has become prohibitive in some lines. When the building boom began men, who wanted to build ships quickly, offered big wages in order to secure all the labor possible. That was satisfactory for a brief period, but, when ships showed a wonderful advance in value and freight rates soared to unheard of heights the wages of shipwrights and all others who had anything to do with ships soon attained to a corresponding elevation.

When the price of ships reached the summit and when freights began to show a downward tendency, the wage-earners discovered that the high cost of living rendered it absolutely necessary for them to receive higher wages. And the worst of it, from the employer's viewpoint, is that while the price of ships may fall and freights continue to drop, wages still have an upward tendency with the avowed object of matching the advanced cost of living. The same holds true of the men who sail the ships as well as of those who build and rig them. Seamen's wages are three times as large as they were at the beginning of the war, and are at least fifty per cent. higher than they were three years ago when the sea was infested with mines and swarming with submarines

The Future of the Lumber Market

House-building on account of high prices, has already practically come to a standstill. A few men who have recently been making easy money, have been spending it freely in enlarging and improving their residences, but, except in a few places where the housing problem has become acute, scarcely any new houses are being built. This, of course, has an influence upon the local demand for lumber, and will not tend to increase prices. As this is "Presidential year" in the United States, no increase in the demand for house-building lumber can be expected from that country. In fact the chief demand at present is for pulpwood, piling and hardwood lumber.

To what extent will lumbering operations be carried on next winter? This problem is still unsolved, and the answer depends upon various causes, some of which are still unsettled. Many operators have large stocks of last year's lumber on hand and, if prices abroad show a downward tendency it is probable that the output will be smaller than usual. Very few operators will care to largely increase their stocks on a falling market. High wages may also prove a determining factor, for they may absorb the whole margin of profit.

The workingmen of Nova Scotia have had more money during the last two three years than they ever had before. No one need wonder that they are reluctant to accept a smaller wage than they have been able to command, but unfortunately, they want higher wages because it costs so much to live. The only way the high cost of living can be reduced is by greater production; and that can never be attained by demanding higher wages and working fewer hours. Someone has to pay for every advance in wages by increased prices for the necessaries of life. A good example of the way the "vicious circle" works has been seen recently in connection with the railways. The trainmen demanded more pay, as they had the same right to do that other workmen have. As a consequence of the concessions made to them everyone, who travels by rail, has to pay higher prices. Every merchant who gets goods by train has to pay more freight, and, to get even, has to increase the prices of his goods. And now we are told that the price of coal must advance to make up for the increased transportation charges. Practically every householder and every traveller in the country has to pay the increased wages to the trainmen and the trainmen in their turn, will have to pay higher prices. And yet the workingmen seem to be unable to see that they

cannot lift themselves by their boot straps. But high wages have decided compensations and chief among them is the fact that they imply employment. They undoubtedly increase the joy of life to a large part of the population, and they indicate that the country is prosperous and progressive, but, of course, when employment ceases, wages, high or low, must come to an end.

Unfortunately there are indications that there will be considerable unemployment during the coming winter. Every shipyard that is forced to close will make a big difference in the community where it is established. The pay envelope will be missed in many homes, and even those who have been wise enough to make provision for such a contingency, will find themselves deprived of comforts and enjoyments which they had almost come to regard as indispensable. The worst of it is that when a big enterprise is obliged to shut down it is likely to cause the closing of a number of smaller industries either directly or indirectly connected with it. The effects of the shut down are thus more widely felt than would at first appear, for a big concern usually has its ramifications all over the country.

It is sincerely to be hoped, however, that the indications may prove unreliable and that all doleful prognostics may be without foundation, for unemployment is bad for many and benefits none. None the less it will be no harm if those who now have profitable employment make preparation for a less prosperous period, for if there should be no season of unemployment it will be all the better for all concerned.

How to Obtain Best Results from Your Ads

Use Enough Words to Tell Your Story Interestingly—Have Something to Say and Use Proper Space—Avoid Freak Displays—Layout and Balance

The "Retail Lumber Merchandiser," published by the Retail Service Bureau of the National Lumber Manufacturers' Association, has appeared. The first number is devoted to advertising and some splendid pointers are given.

From the first number, which deals with the subject of advertising, there are articles that take up such matters as "The Advertising Appropriation," "Keeping Records," "Making the Most of Your Newspaper," "Suggested Newspaper Stories," Suggested Copy for Newspaper Advertising," "Suggested Copy for Direct Advertising," and "Miscellaneous Advertising Methods."

For example, here is an article on Newspaper Advertising with some actual copy that any dealer is free to use, or from which he may gather suggestions to aid him in carrying out his own ideas.

There are a few, and just a few, general principles which every dealer should follow in all of his advertising. Most important of all is to remember that every successful advertisement must reflect the personality of the business it advertises, which is usually the personality of the man behind the business. How can this be done? By insisting that every ad "talk to" the public as you would talk to a customer face to face.

Be sure that your advertisements represent your business, and not the other man's. If you want people to be really interested in your advertising write it so they will know that you wrote it.

When tempted to repeat an ad rather than prepare a new one, ask yourself how you like to read the other fellow's old stuff. Unless it is good enough to pass that test, write another.

Keep your ads full of news. The arrival of a car of high grade material, a new labor saving device, an exceptional feature about some sale, such as a farmer coming a long distance to trade with you—the public in interested in these things.

Take advantage of the news items of the day, both local and national. The statement of a prominent man, happenings in financial and industrial circles, local events, can all be used to make your ads interesting. Be sure there is a definite connection, however, not merely a catch line to attract attention. Use enough words to tell your story. An idea half told is lost. Have something to say; say it interestingly, and use proper space.

If the particular commodity or use of lumber that you are advertising is not familiar to the public, be sure to give sufficient description. Many ads fail because the writer assumes that the public knows as much about the goods as he does, or because he uses implement-shed arguments to sell sleeping porches. Advertising to "keep your name before the public" is mighty expensive unless you make your name say something every time it appears.

Keep a notebook to jot down ideas and a file for material to be used later. Make a practice of clipping other ads that impress you.

Work out the style of display which suits you best and follow it fairly consistently. An ad of good proportions and distinctive character is more effective than freak display.

As a general thing an ad. will look best when the length exceeds the width. "Streamers" or strips two or three inches deep and extending the width of the page are bad because they do not permit a good display of the type matter and they injure the general appearance of the page.

Prepare your ads and take them to the newspaper office several days in advance. The printers will appreciate this and will be able to give you a better looking ad.

Clip your ads and post them where both public and employees

How Much Has Your Rent *Increased?*

Authorities are agreed that the present high level of prices and earnings in general will continue for a period of at least five years.

If your rent has been **increased**, look in the table below and see what that **increase** will amount to in five years, then ask yourself if it isn't a good business proposition to BUILD NOW.

Tear out this Ad. You will want to refer to it.

Rent Increase Per Month	With Interest at 6% Compounded Annually			
	5 Years	10 Years	15 Years	20 Years
$10.00	$ 698.43	$1,581.68	$2,793.10	$4,414.26
11.00	968.24	1,739.85	3,072.41	4,855.69
12.00	838.08	1,989.02	3,351.71	5,297.11
13.00	907.92	2,056.19	3,631.02	5,738.54
14.00	977.76	2,214.36	3,910.33	6,179.96
15.00	1,047.60	2,372.52	4,189.64	6,621.39
16.00	1,117.44	2,530.69	4,468.95	7,062.82
17.00	1,187.28	2,688.86	4,748.26	7,504.24
18.00	1,257.12	2,847.03	5,027.57	7,945.67
19.00	1,326.26	3,005.20	5,306.88	8,387.09
20.00	1,396.80	3,163.36	5,586.19	8,828.52
25.00	1,746.07	3,954.20	6,982.73	11,035.65
30.00	2 095.20	4,745.08	8,379.34	13,242.79

While you are at it, just figure what your **total** rent money will amount to in ten or fifteen years. Building a home **pays today**, just as it always has.

We are sincerely desirous of being of service in this all-important matter and will welcome an opportunity to talk over your problem with you, without obligation, of course.

HOW MUCH HAS YOUR RENT INCREASED?
Study this ad carefully and see if it doesn't combat the idea that it is better to rent than to build under present conditions.

FOR YOUR CHILDREN'S SAKE

You have ambition for your children—everyone has. Ambition thrives only on real home life, and real home life demands a home of your own.

During the present period of unnatural earning and reckless spending, young people are bound to form habits and standards of living which will either make or mar their future happiness and usefulness. A home that is all yours and all theirs will become to them an inspiration for the present and a safeguard for the future.

Is YOUR home an asset or a liability? We shall be glad to talk over your problem with you, without obligation, of course.

can see. Get all your employees together in some manner and "sell" them on the idea or policy or commodity you are advertising. Remember that after all the most important and far-reaching effect of advertising is the influence it exerts on you and your organization.

Copies of "The Retail Lumber Merchandiser" may be obtained from the National Lumber Manufacturers' Association, 750 McCormick Building, Chicago, Ill.

The central thought in this and the preceding ad is that, regardless of the high cost of living, this country is now passing through a period in which every man finds his earning power vastly increased, and that out of this period some are going to lay the foundation of future prosperity while others who live for the present only have nothing to show for what is probably the best period of their lives but some added years in age and diminished prospects for the future. Look back in your own memory and see that this has always been true.

The retail lumber dealer, more than any other class of trade, enters into the home life of the community and exercises the greatest influence in shaping the destinies of individuals and communities, and through them, of the nation.

Below is an advertisement to farmers, urging them to build needed improvements now, and which can be adapted to other farm buildings. There is no reference to a plan service, but if the dealer is equipped to furnish plans this fact should be brought out in the last paragraph.

BUILD THAT NEW BARN NOW!

Harvest time will soon be here. You may need a hay-barn, cattle barn, a combination barn or just a plain barn, but if you need it you cannot afford not to build it now.

This year, with the great shortage of farm labor, every farmer wants to raise the most with the least possible help. Proper equipment is more necessary than ever before. If you need any kind of farm buildings you simply can't afford to wait.

Figure it out in bushels of grain, or tons of hay, or pounds of hogs and cattle and you will find that a good barn won't cost any more to-day than it ever did. And every farmer knows that a good barn helps produce bigger crops and better returns.

Our stocks are complete and we will gladly serve you. Come in and talk it over to-day, without obligation, of course.

This ad is not recommended for use verbatim, but only as a suggestion. Before writing any ads addressed to the farmer the dealer should by all means go out and talk to them so he may know what the farmers are thinking and feeling. Many of them are in a resentful mood, and with considerable justification. They have been accused of profiteering and they see their children and their farm help leaving the farm to an extent that is serious. These are conditions which must be met courageously but with understanding and sympathy. The retail lumber dealer, through his contact with the farmer, has a great opportunity today to be of service to the farmer, his community, and to the nation.

BOUGHT THE NEW CAR DID YOU?

That means you want a dandy garage to house it in, something convenient, yet attractive enough to be a real addition to your property.

Come in and see the attractive designs we have on file in our office, or if you already have a design that pleases you, bring it in and let us quote you on the cost.

A double garage may prove an excellent investment. The cost is only a little more than for a single garage, and the extra rent will soon pay for the entire building.

Come in and talk it over to-day, without obligation, of course.

YOUR LUMBER COMPANY

Telephone 200 Blank Street

Note the reference to designs for garages. It is assumed that practically all dealers will have a number of designs of this kind. If not, this paragraph can be changed accordingly.

The Division A-3 ads suggested here may be used with or without cuts, as desired. Without cuts the space should be two columns wide by from six to eight inches; with cuts the space should be larger, depending upon the size of the cuts.

Good Volume of Business Expected

Prominent Western Lumberman Takes an Optimistic View—Large Timber Deals are Pending

By C. S. Battle, Vancouver, B. C.

C. S. Battle, Vancouver, B. C.

Conditions have changed rapidly and lumber and logs reached a price not dreamed of a few years ago, and one wonders if the limit has yet been reached in the scale of things.

In a conversation recently with one of our largest shippers who also does a brokerage business, I learned that the price on export lumber from the Pacific Coast has not declined but is very firm and in active demand. An increase in tonnage for the shipment of lumber has had a tendency to stabilize prices but the demand for bottoms is still in excess of the supply. Ocean rates, however, are gradually declining, this to the betterment of both the producer and consumer. New steamship lines are being established with Vancouver as headquarters and those in existence are adding boats to their fleets, which is encouraging news.

The market for lumber in the great wheat fields of the Canadian Northwest has been slow and sluggish, caused by the uncertainty of a lower price for lumber. I am informed that lumber for rail shipment has reached bottom and from what I can learn I do not think buyers throughout the Northwest would make a mistake like normal or above, the mills on the coast will be taxed to capacity to take care of the business, and should a car shortage occur at that time someone will go short on lumber.

For similar reasons rail shipments to the United States have fallen off to some extent, but to this must be added the car shortage which has been quite serious and full relief has not yet been given.

The local trade for lumber has been better than for several years. It is reported that every house in the city has been rented and the hotels and apartment houses are full and overflowing, and the population must be housed. It stands to reason that the present demand locally will not only be maintained but increased.

The pulp and paper industry, while in its infancy in this part of the world, is getting to be quite a factor. To the five mills that have been operating there must be added a sixth, viz., The Beaver Cove Lumber & Pulp Company located at Beaver Cove on Vancouver Island. This company owns a saw mill with a capacity of 100.000 feet daily, a six-machine shingle mill, and a 40-ton pulp mill, which will be increased within a short time to 60 tons. Prices paid for pulp and paper are beyond the dreams of the extreme optimist of a few years ago. It is rumored that other pulp mills will be built on the coast during the next year and I think this rumor to some extent is well founded.

As you know, the shingle market fluctuates more readily than lumber and the shingle men say that "It is either a feast or a famine." The extreme high prices of six months ago have been shattered but at present prices the mills can run to a capacity on a fair margin of profit.

The market on fir logs remains about the same, but cedar logs have declined owing to the decline in shingles. Prices, however, are ample to keep the logging industry going on a reasonable profit-bearing basis. The prices of hemlock and larch owing to the large demand by the pulp mills are nearly as high as fir.

In my last letter I informed you that there was an active demand for small tracts of timber located handy for logging purposes and also that large buyers from across the line had representatives in this section seeking information and it was quite probable that this year would see a more active demand for large tracts of standing timber. This prediction to a large extent has been realized. Some big deals have been made in timber and other larger deals are pending. Most of this capital comes from the American side of the line, but it is interesting to note now that capital in the Old Country is becoming very much interested in B. C. timber from a standpoint of both lumber and pulp.

Everything considered, I do not see anything alarming in the industry. To the contrary, old experienced lumbermen look forward to from three to five years of good business, not only in volume but in fair prices.

Heavy Exports of Lumber from Quebec Port

Revival of Activity Owing to Drop in Freight Charges and Requirements of Wood Material from Canada—Rates Still Too High, Trade Declares

The business activities at the port of Quebec in regard to the shipment of sawn lumber and timber to the United Kingdom from the first days of July to the time of writing have been fairly good, and fully thirty per cent. in excess of the export trade in wood for the year 1919.

These conditions are due to the drop in steamship rates from 300 shillings per standard of deals to 200 shillings, which came into force in the latter part of July and still prevails. The lumber and timber export trade are, however, not satisfied. They claim that the rates charged by the ocean lines are still far too high, and are looking forward for a further decrease in the fall. The United Kingdom purchasing powers, like the Canadian exporters, are waiting for a substantial decrease in steamship freight charges, and in this connection, are holding back orders until such time as the rates in question will come near a resumption of pre-war basis.

Advices from overseas admit the need of sawn lumber and timber for construction purposes, and at the same time point out that the cost of materials has caused delay in construction. Moreover, the investors are reluctant to put their money in a venture that in the course of a few years will depreciate in value and greatly impair their profits.

The advices admit the great need of wood material from Canada for the steady demand for construction within the United Kingdom, and reconstruction in France, Flanders and Belgium, but, at the same time, contend that the ocean freight rates, together with the abnormal rates of exchange, have been and still are a prohibitive barrier. But notwithstanding these obvious difficulties, the Quebec lumber and timber exporters are carrying on a business this season, dating from the first of July to the present, considerably in excess of 1919, and with good prospects for the rest of the season of navigation in the St. Lawrence.

During the season of navigation in 1919 there were shipped from the port of Quebec by all classes of steamers 61,852,743 feet B. M. lumber; 15,253,189 feet of timber; 3,965,753 feet of spoolwood; 1,557 tons of pulp, and 3,754 cords of pulpwood. There is no direct way to learn the quantities of wood that have been shipped up to the present this season, inasmuch as there is no statistical department at the Quebec Custom House. The correspondent of the "Canada Lumberman" called at the Customs House to obtain information for the present letter, and was informed that the statistical branch of the Quebec Customs with its officials had been removed and centralized in Ottawa nearly two decades ago. There is now only one official left at the Quebec Customs House to perform this special work, who sends in a daily report to Ottawa, where it is necessary to seek all such desired information, which is only one of many instances of Government discrimination against the port of Quebec as regards shipping.

Increase is Thrity Per Cent.

The Harbor Commissioner's office was next sought for the information, where it was learned that the totals were only made up for the annual report in the month of December each year. It was stated, however, by the official in charge, that fully thirty per cent. more of sawn lumber and timber has been shipped this season to the United Kingdom, from July 1st up to August 20th, than in 1919, and it was expected that up to the end of the season the statistical returns would show the heaviest export of wood from the port of Quebec for the United Kingdom since pre-war days.
